A great deal has been written and said about the future of Prestel, most of it being predictions about its ultimate demise. Despite all these comments, British Telecom look set to give Prestel a boost with a new system.

This new system, called Micronet 800, is aimed at providing micro-computer owners everywhere with a massive database service for their own use. By attracting this fast growing sector of the public British Telecom hope to at last make Prestel a viable proposition

The major problem in implementing this kind of system has been the cost of the modem, which is needed to connect your computer, via a telephone line, into the main computer database. This problem has now been solved by a company called Prism Microproducts Ltd who will be producing the modem, to be sold in the high street for about £50.

So what are the benefits of Micronet to the home computer use? The advantages can be broken down under two main headings, Software and Communications.

When the user taps into Micronet it is hoped that he will have access to a large software database. This means that you will be able to use Micronet as a sort of software library. So when you want a game of Space Invaders you can call up Micronet and tell the system to download the program to you. When it has done this you can then disconnect and play the game. The cost of this, on top of the £1 a week Micronet subscription, will depend on the software and who is supplying it. There is no reason why you shouldn't buy software direct off the Micronet, just download the software, save it onto tape and let the computer debit your account.

The Micronet system will also offer a facility similar to the Prestel Mailbox service. With this you will be able to send a message to Micronet for a friend to pick up when ties into the system. Unfortunately becase of the restrictions of the modem, real-time communications between computer users will not be possible.

Apart from this obvious form of communication the Micronet will carry a large database of information relating to home computer users, so who knows, one day you might even get your copy of *Personal Computing Today* downloaded to you through Micronet.

Unfortunately this system relies on a lot of people using it in order to make it worthwhile, not only for the people who have set it up and invested in it, but also for the users themselves.

So if you are interested in giving your computer the ultimate expansion then stay tuned to *Personal Computing Today*.

UP TO £5000 IN PRIZES

MARTIAN RAIDER

MARTIAN RAIDER
For unexpanded Vic20
Skim as close as you dare to the surface of the planet, devastating the Martian cities, destroying ammunition dumps (gaining more time), shooting down the ground-to-air missiles.

SHARK ATTACK

SHARK ATTACK
For unexpanded Vic20
You are in shark-infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you, trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of stopping or covering your tracks for too long. If you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopuses (sometimes the sharks will eat part or all of one!)

AT LAST **VIC 20** OWNERS

CAN OBTAIN ROMIK SOFTWARE BY RETURN OF POST!! FROM VIDEO-VIEW

SUITABLE FOR KEYS OR JOYSTICKS
100% Machine Code Fast Action exciting Arcade Games from Britain's leading Software House

MULTISOUND SYNTHESIZER
For the unexpanded Vic20
The Vic Multisound Synthesizer is very flexible and can be played in more ways than can ever be explained here, to create music and special effects. For example, create any tune, up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key "9" and enjoy the added effect. Now hit "+", listen to the difference. For a surprise hit "-". Now add a melody over the top, hit key "8" then "7", now play a melody, or experiment. *Have fun!*

A Machine Code Arcade Quality Game
SEA INVASION
Unexpanded Vic20
Fight off the attacking sea creatures for as long as you can. Shoot the whale for a surprise score, watch out for the crabs, starfish and octopuses.

MIND TWISTERS
For unexpanded Vic20
Four games to stretch your brain
Blackjack, Decipher, Four Thought and Teaser are our computerised versions of very popular home games and will test your mental agility and skill for many a long hour.

missile panic

TRAPPED IN THE MAZE OF DEATH THE VENOMOUS MISSILE IS ON YOUR PATH. THERE'S NO HIDING.

A High Speed, Nerve-racking Arcade Game for the Unexpanded VIC.
Just £6 inclusive.

ROAD RUNNER — ONLY £5

In this remarkable game you must control Eric, the Road Runner, through the "space warp of vehicle molecular," and safely into the gravity space lanes. With ever-increasing levels of play, a super-cool head is needed to conquer this addictive machine code game.
For arcade enthusiasts everywhere.

ANDROID ATTACK — ONLY £5

The Androids of Jupiter (an ever growing race) are on your path in the maze of the lost Isle. They look more menacing as each second passes and will attack without mercy. Run to stay alive.

SPACE HOPPER — ONLY £5

Once there was invaders, then Packmen, now there's Space Hopper. Can you guide your Space Frog through the hustle and bustle of space traffic without being crushed by intergalactic space trains? Can you avoid being shot by hidden laser guns and are you able to hop through the space warp. If you think you can order it today!

STAR WARS II — ONLY £5

Only the Force can save you!!! In this perilous journey through time and space, having conquered the evil empire, you must now follow Luke's steps and destroy as many of Xatar's ships as possible. Your arms are limited and with a short supply of fuel, time is of the essence, only the fit can survive; that is if the Force of Titan is with you!

NAVAL ATTACK — ONLY £5

With stunning Graphic display of mountains, golden beaches and deep blue seas, you are assigned to attack a vehicle convoy. Your on board gun has a quite unique sight which allows you to destroy your target with incredible precision. A totally addictive game that will leave you trembling with excitement.

SPACE WARS/BATTLE ZONE — ONLY £5

Two very exciting, hi-resolution, fast action, two player games that can be played simultaneously; for the price of one. Space wars (like the arcade game) is a typical dog fight. In Battle Zone, a cool, tactical head is needed to outwit your opponent.

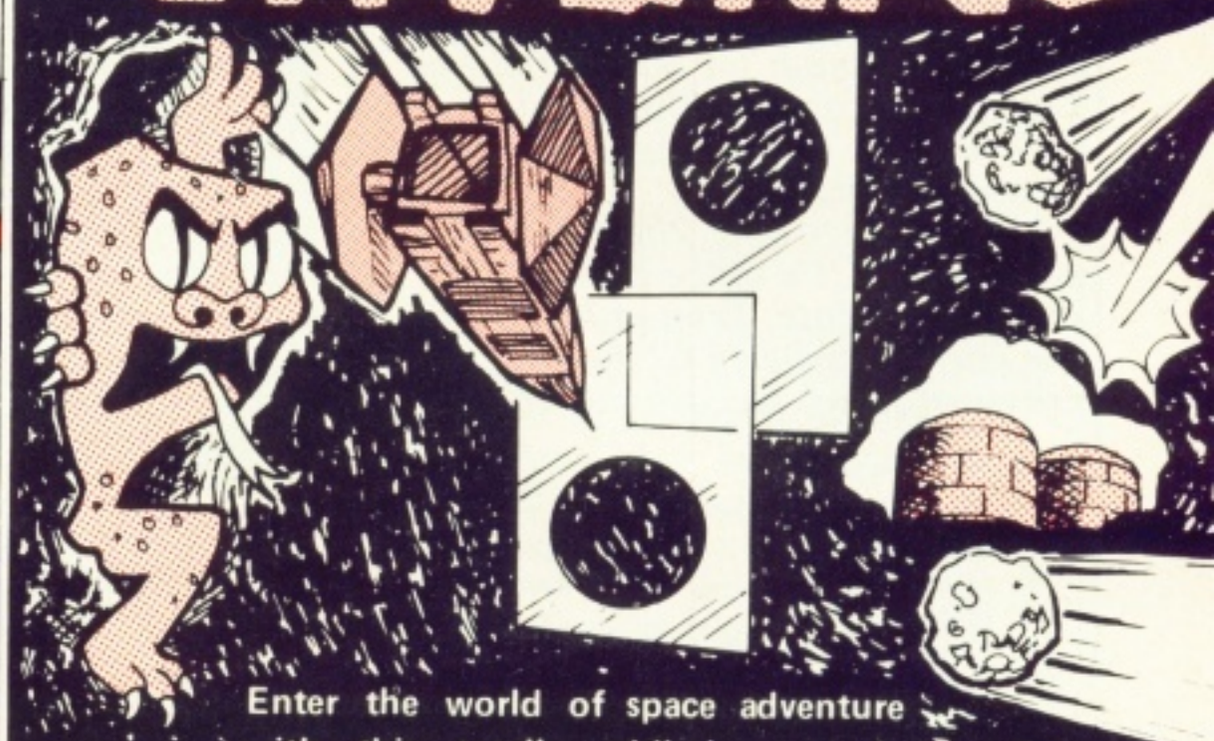

ALL GAMES RUN ON UNEXPANDED VIC

Commodore 64 Winner

Picking a winner for our Christmas Crossword competition was a difficult task because we could only award one prize.

Altogether over 2000 entries swamped PCT's office right up till the closing date. Printed below are the correct answers to the crossword, just in case any of you were flummoxed by one or two of the clues.

Eventually the lucky winner of the Commodore 64 computer and Simon's BASIC kindly donated by Commodore Business Machines is J.P. Britton of Reading. He was the lucky first correct entry out of the giant bag (a big, black dustbin liner to be precise!). Our hearty congratulations go to Mr Britton and our commiserations to all those who took the time and trouble to complete the crossword and send in their entires. It's nice to know that you are all so keen. The Winner's computer will be presented to him by Commodore in the near future.

Our thanks go to Commodore Business Machines for making a computer available to PCT for this competition and we wish them luck with sales of the machine.

Activision Newsletter

Ray Hodges Associates has cleared up the confusion surrounding Atari VCS and Activision mailing lists (PCT February 1983).

Ray Hodges says she made and kept a verbal agreement with Atari's managing director, Graham Clark, not to use the firm's VCS club newletter mailing list for the PR firm's new client, Computer Games (Activision's UK distributor) when Ray Hodges Associates ceased to act as Atari's PR operation.

Activision's own newsletter, Fun Club News, launched by Computer Games, has built up a substantial mailing list of its own through various sources including taking names from customer records, buying or borrowing lists from retailers and using leads from couponed advertisements.

Ray Hodges also says that Activision cartridge sales were last year 'extremely successful' and did not warrant using 'the fruits of a competitor's labour' to further their own cause.

CGL Sharpen Up With Sord

Britain's largest distributor of micro-processor controlled games is on the brink of moving into the computer field.

Computer Games (CGL) has clinched a deal with the Japanese computer manufacturer Sord to sell the Sord M5 in the UK from the end of March. CGL will market the machine under a name yet to be chosen and it will be on sale for about £170 through multiples and major stores throughout the country.

The Sord M5 will also be sold via the manufacturer's own dealer network in this country for the same price. During 1983 CGL will also bring out any hardware add-ons produced by Sord, including a printer and disc drives. CGL also plans to have a 200 strong software library available by the end of 1983, all of which will be written by the manufacturer. Virtually every sector of the market will be catered for software-wise with programs covering games, business and education.

CGL's managing director David Morein said: 'This is the next logical step to take and one which we were working towards over the last five years.' From originally distributing toys like hand-held space invaders and the infuriatingly frustrating Game & Watch toys CGL last year moved further towards the computer market when it began distributing Activision's video games cartridges compatible with the Atari VCS.

CGL chose the Sord M5 as the computer it wanted to market because its directors believe it to be one of the best micro computers around and it is produced by one of the fastest expanding companies in Japan.

Win A BBC System

Calling all schools in desparate need of a computer.

Now's your chance to win a complete system, the BBC B Microcomputer, its disc drive, teletext adaptor and 15 software programs. Not a bad little package for the price of a trip to the flicks and a bit of imagination.

The Tron Competition is open to both Primary and Secondary Schools in the UK, although each school may enter once only and the entry should comprise a team of six at the most.

The competition is centred around the recently released Walt Disney film, Tron (also the name of the central character). It's packed full of visually stunning computer graphics and special effects to pad out the plot which features Tron as the hero. The concept is quite

complicated, and involves the 'real' world and the 'electronic' world in which the characters assume different identities.

The basic plot is that a video games designer, Flynn, had his games ideas stolen by the boss of his former employer, Encom, a giant international communications corporation. The only way Tron can erase his games from the Master Control Program is to dice with death inside the MCP's memory circuits. Discover whether succeeds or not when you see the film.

Entries from Primary Schools must describe in no more than 100 sentences of 10 words or less the tale of Tron. The winner will be the entry which the judges think is the most exciting description of Tron.

Teams from Secondary Schools have a slightly harder task. They have the option to devise an adventure game on the film of Tron using passages of the film to develop adventures for the Tron cast. The alternative is to devise an arcade game based on the characters and story of the film.

Quicksilva Software Competition In This Issue

A mini competition with a mammoth prize courtesy of Quicksilva is open to all Spectrum owners this month.

The problem to solve is easy, just identify the pictures printed on the competition page (p27). Spectrum software firm Quicksilva has generously donated the prize. The lucky winner will receive all the new releases brought out by Quicksilva during 1983 as well as an invitation to a special conference which will be attended by Quicksilva programmers later this year. There you will have the unique opportunity to rub shoulders with the people who bring you Quicksilva's high-quality, creatively produced software, such as, Meteor Storm, Space Intruders, and Timegate.

Computer Club Round-Up

News from computer clubs is flooding in with the birth of four new ventures. Read on for a round-up.

● *First off is the Jupiter Ace Users Club, (and no prizes for guessing what machine it specialises in). The club is based in Brighton and its purpose is for memebers to exchange information on this new computer. In addition it is bringing out cassette-based software for sale to Ace owners. Two tapes are out so far including a RAM and ROM unraveller and a three-program tape containing a game called Night Rider, a screen layout aid entitled Sketch, and a text editor program called, surprise, suprise, Editor. They are reasonably priced at £3.50 and £4.50.*

Subscription to the club costs £7 a year for which you get three newsletters and the chance to buy cheaper kit machines, and add-ons.

For further information contact John Noyce on Brighton 602354 or write to him at 18 George Street, Brighton BN2 1RH.

● *An all-purpose, any machine computer club for enthusiasts living in Essex has sprung up. The* **Burnham Computer Club** has admirable aims to promote all aspects of computing at every level. Don't worry if you don't yet own a computer or have no computing experience, the Club will welcome you regardless. Presently 20 strong most members have their own computer and the Club eventually hopes to buy a communal computer.

If you are really green in this field and are an absolute beginner you can test the water with a free first meeting. A junior section of the club has already been formed for those still at school.

If you feel this sort of club could be up your street contact the Acting Secretary, Frederick Wheeler on Maldon 783918 or write to him at 93, Maple Way, Burnham-on-Crouch, Essex.

● **Southampton Amateur Computer Club** has a change in secretary. Now the main man is Roger Shears and he can be found at the end of the telephone if you ring Southampton 552927. The Club's address remains the same: 'Gardenways', Chilworth Tower, Chilworth, Southampton, S01 7JH. This club's meetings take place on the second Wednesday of each month and cater for several user groups. Membership is normally £8 a year, but this is cut to £5 for students and old age pensioners, and £1.50 for junior members.

● A plea for more members to swell the ranks of the Eastwood Town Micro Computer Club is out. Having been formed some three or four months ago on a monthly basis the Club is now so popular that it holds two meetings a week. The Club formed a new committee in January to run the club which is held at any of four venues in the Nottingham area. These are Devonshire Junior School (Wednesday at 5.45pm), Eastwood Volunteer Bureau (Friday at 5.30pm or 6.30pm, Upper School Mansfield Road on Wednesday/Friday when not at the previous location, or Sunncroft Scout HQ, Derby Road.

Contacts in these three areas are Ted Ryan (Eastwood area) on Langley Mill 65011, Roger Hellings (Heanor area) on Langley Mill 69281, or Robert Clifford (Underwood and Selston area) on **Ripley 812459**.

NEXT MONTH

COMING NEXT MONTH
On sale from March 4

Personal Computing today

Hardware Review

Our hardware review next month will take the form of a comparison between the Dragon 32 and the recently released Colour Genie.

Despite its short time on the market, the Dragon 32 has already become a firm favourite with many home computer owners and many shops found it to be one of the hottest pieces of computer merchandise on sale at Christmas.

The Colour Genie is similar to the Dragon in many ways so we will be putting the two together and examining which comes out tops.

Scintillating Software

On the software front we have a program for the Sharp which will let you recreate the famous battle of El Alamein. So here is your opportunity to fight that decisive battle again from the comfort of your own front room.

For the Atom we have an interesting program that has you trying to trace an escaped gnu by using your dogs to pick up the trail of aniseed which it leaves behind. In case you're wondering how it manages to leave a trail of aniseed you will just have to read the April issue to find out.

All this as well as our regular Software Checklist, Factfile and Software Reviews will be at your newsagent on March 4.

Note: At the time of going to press this information is correct but may be altered for reasons beyond our control.

Special Survey: Add-ons

Nestling between the regular features in the April issue of Personal Computing Today will be the first part of our comprehensive look at the peripherals you can buy for your computer. We kick off by looking at the best add ons for the VIC, Spectrum and BBC computer.

Encompassed within our survey will be reports on printers, extra memories, joysticks and virtually anything that you can plug into or bolt onto your computer. So if you are thinking about buying your computer (and yourself) a present then make sure you pick up a copy of our April issue.

GIVE THIS TO YOUR NEWSAGENT

LET YOUR MICRO TAKE OFF WITH GEMINI

USING GEMINI FUNCTIONAL CASSETTE SOFTWARE FOR JUST £19.95

Fully compatible with

TI – 99/4A SHARP MZ – 80K/A/B
VIC 16K BBC Micro
Oric Sinclair Spectrum
Dragon 32 ATARI 400/800

Here's the software to run your budgeting, your business, your stamp collection, your car costs . . . even to plan your next meal and help you choose a wife. Tested programs that come with all the documentation back-up you need from Gemini who are experts in practical software. So mail us the coupon – and put your micro to work . . . fast.

SPECIAL LIMITED OFFER
Any 3 programs at £19.95 for the price of two with all orders received before 31st March 1983.

DATABASE The Program that everyone needs. Facilities include sort, search, list, delete, change, totals, save file, line print if required, etc. etc. Can be used in place of any card index application. **£19.95**

STOCK CONTROL All the necessary for keeping a control of stock. Routines include stock set up, user reference no., minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more. **£19.95**

MAILING LIST A superb dedicated database to allow for manipulation of names & addresses & other data, with selective printing to line printer. Features include the facility to find a name or detail when only part of that detail is known. Will print labels in a variety of user-specified formats. **£19.95**

INVOICES AND STATEMENTS Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations including VAT automatic and provision for your own messages on the form produced. *Not Spectrum **£19.95**

COMMERCIAL ACCOUNTS A gem of a program, all for cassette, with the following features:–
Daily Journal • Credit Sales • Cash Sales • Credit Purchases • Purchases – other • Sales Ledger • Purchase Ledger • Bank Account • Year to Date Summary
A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance. **£19.95**

HOME ACCOUNTS Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P. etc. etc. etc! You'll wonder how you ever managed without it. **£19.95**

SOFTWARE

BILLIARDS

If you are fed up with watching Billiards on the TV try playing it yourself with this game from Eugenio Rapella.

Ever fancied yourself as the computer world's answer to Steve Davis? Now you need step no further than your living room. Snooker it's not, but you can still experience the fun of lining a shot up and calculating the rebound. The game is based loosely on the traditional game of Billiards.

In this version of Billiards the idea is to clear all the balls off the table by knocking them into the pockets using the cue ball. There are no points lost for missing a ball, so you can move the cue ball round the table to line up your shots. You aim the cue ball by pressing on the direction keys. These are: W-North, X-South, D-East, A-West, E-North East, C-South East, Z-South West, Q-North West. If you hold the SHIFT key down when you press the direction key then the shot is a lot stronger and the ball will keep moving round the table for longer.

The score is calculated on the number of balls potted in relation to the number of balls at the start. The total number of shots is taken into account as well. This means that potting ten balls using 20 shots will score higher than potting ten balls using 30 shots. The game is over either when you have potted all the balls on the table or you have accidentally potted the cue ball itself. The game of Billiards runs on an unexpanded VIC-20.

HOW IT RUNS

Line 3	Sets volume.
Lines 5-7	Set initial position of the balls.
Lines 10-14	Move the balls.
Line 20	Sound subroutine.
Lines 110-180	Set colour and draw the table.
Lines 190-210	Put the balls on the table.
Lines 300-390	Detect the key press.
Lines 400-402	Decide whether it's a short or long run.
Lines 410-510	Decide the new position of the ball.
Line 530	Manages movement of ball when in a free area.
Lines 560-570	Ball going into a hole.
Lines 600-830	Ball going against the edge.
Lines 900-920	Ball is striking another ball.
Lines 1000-1090	Print score and ask for another game.
Lines 2000-2120	Print the introductory text and get the required number of balls.

HINTS ON CONVERSION

As with all programs that produce graphic screen displays, any conversion problems centre on the different ways in which machines handle their screen memories.

The VIC-20 has a memory mapped screen, so most of the VIC programs POKE to the screen to display characters, especially when the characters have to move. Billiards employs this technique. If your machine does not support this form of screen handling then these screen POKEs should be replaced with either a PRINT AT or a PLOT command.

The only other POKEs used in this program are those to control the sound and the colour.

The sound POKEs are to location 36878, which controls the volume and location 36876, which is the alto voice. These POKEs should be omitted or replaced with your own machine's sound controls. The colour POKE is to location 36879 and sets the foreground and background colour of the screen. Once again this should either be omitted or changed to your own machines system.

Becuase of the way in which the VIC's memory locations shift when the machine's memory is expanded, it is also necessary to alter the program if you have more than 3K of memory fitted. The following formula will give you the new position of the screen:

S = 4 * (PEEK(36866) AND 128) + 64 * (PEEK(36869) AND 112)

Having now found the new location of the screen you must adjust the screen locations in the program. On the unexpanded VIC or the VIC with 3K expansion the screen starts at location 7680 and runs to location 8191, so in order to run the program you must change any POKE values within these limits to their corresponding positions in the expanded VIC.

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

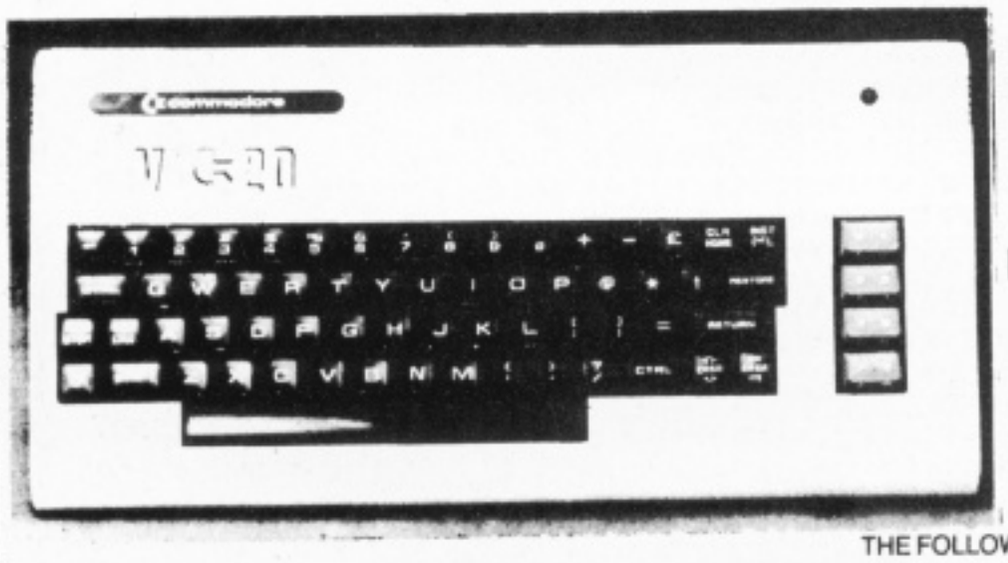

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

MYSTERIOUS ADVENTURES

FOR BBC MICROCOMPUTER MODELS A & B*

Join the growing band of Adventurers who are enjoying these absorbing and stimulating programs. Step into another world of Fantasy, Magic, Mystery and Sorcery. Only your wits and cunning can ensure success in these scenarios!

- **WRITTEN IN ULTRA-FAST MACHINE CODE.**
- **SAVE GAME FEATURE.**
- **SPLIT SCREEN DISPLAY.**

1. THE GOLDEN BATON — Venture into a strange province of Sorcery and Evil Magic to recover the Golden Baton, a priceless artifact whose powers are said to bring great Health and Prosperity to the Land.
2. THE TIME MACHINE — As a Newspaper reporter you are sent to investigate the eccentric professor who lives in the old house on the Moors. What is his secret and why is his house now deserted?
3. ARROW OF DEATH (Pt. 1) — A blight has fallen on your homelands, the Baton has become tarnished and now radiates a malevolent aura of Evil. Your mission is clear — trace the source of this Evil and destroy . . . or be destroyed. This is the first part of an Epic Adventure although each part can be played as a stand alone scenario.
4. ARROW OF DEATH (Pt. 2) — You now have the means to destroy your enemy . . . but you are far from home and this land is strange to you. Can you cope with the deadly perils which approach you and have you the strength to see your mission through to the final conflict?
5. ESCAPE FROM PULSAR 7 — Alone on a gigantic Space-Freighter . . . The rest of your crew have died horribly at the hands of a mutated Zoo-Specimen. Your only chance of escape is to reach the Frail Shuttlecraft. But the lurking Monster is hungry and you are the only food it has left . . .
6. CIRCUS — Your Car has run out of Petrol on a lonely road miles from habitation. As you trudge reluctantly down the road in search of help you are suddenly confronted by an amazing sight . . . in a nearby field is a Huge Circus tent! But this is no ordinary Circus as you will soon discover . . .
7. FEASIBILITY EXPERIMENT — Far across the gulfs of time and space, a dying race of super-intelligent beings search the Universe for a Hero to save their existence . . . At length their thoughts turn to planet Earth. You are chosen to be their saviour in a bizarre scenario where death is a mere thought away . . .

* Adventures 5, 6 and 7 require 32K RAM.

Each adventure comes attractively packaged for just £8.95 inc.
Now in stock for ATARI 400/800 £12.50
Available soon for ZX SPECTRUM, ZX81 (16K), APPLE II.

YOUR LETTERS

This page is where you get the chance to put your opinions in print. Personal Computing Today welcomes letters from you on any aspect of microcomputing and views in general — as long as they're printable!

Please drop us a line to: The Editor, Personal Computing Today, 145 Charing Cross Road, London, WC2H 0EE.

Dear Sir,

With reference to the article on page 30 in your January publication of Personal Computing Today, 'Beginners Guide to Programming Languages'. Page 31 refers to further reading on:

1. Pascal User Manual and Report by Jensen & Wirth.
2. A Practical Introduction to Pascal by Wilson and Addyman.

I have contacted my local library by phone but they indicate that both books are no longer published. Can you help me by

a. giving me further information

b. alternatively suggesting other books on this topic.

Yours faithfully

R C Turner

West Sussex

Editor's Reply: If you are unable to get either of these books from a library the only alternative is to order them through a bookshop. Specialist bookshops should keep them in stock. If you still draw a blank try and get hold of a copy of Programming in Pascal by Peter Grogono which is published by Addison-Wesley. This is also recommended as a very worthwhile book on Pascal.

I would also like to point out that the section of that article devoted to Pascal was written by C S Ward and not Jeremy Ruston as the credit may have lead you to believe. Apologies and thanks to Mr Ward.

Dear PCT,

My first ever letter to a magazine was stirred to action by sheer frustration.

Firstly, though, a pat on the back to PCT for an excellent balance of contents, even if your program listings are heavily weighted, numerically, in favour of Uncle Clive, and the over-rated BBC machine.

The object of my frustration is the poor, abused TI99/4A. Not only have all reivews of this machine 'and I think I've read *all* of them) been grossly biased towards emphasising the machine's shortcomings, which are I believe fewer than more favoured micros, but also few of the reviews appear to have made any meaningful attempt at researching the machine.

Here your own Factfile is one of the worst offenders, and if it is meant as a serious article, should be kept up to date; for example you list on other languages for the TI when the following are available: TI Logo, UCSD Pascal, TI Pilot (though only from the USA at present), and an Editor Assembler.

You also list no other add-ons when the following are available: Speech Synthesiser (can be bought for £46.60) which has 373 pre-programmed words or phrases but when used in conjunction with the Terminal Emulator II module (£37.80) you have unlimited speech capability within TI Basic programs. An RS232C interface and modems are also available.

Everybody particularly misses the speech capabilities of this machine which are invaluable when used in education programs; TI's own Early Reading makes excellent use of speech and graphics, and can easily be run by very young children with the minimum of instruction. This is in stark contrast to the majority of programs which are puportedly written for children, and yet expect them to be able to read masses of instructions.

I have also yet to see a review of TI Extended Basic, which with speech, sprite graphics, cassette software protection etc enables some really advanced programs to be written.

My only real complaint about this machine is that despite promises from TI they have not made any technical information regarding this machine available. The information promised was a circuit diagram, modulator port pin assignments, ROM port pin assignments. I'm over-flowing with ideas for this machine, which I am unable to put into operation unless this information is available.

Yours

A P Cook

Swindon

Editor's reply: You'll be pleased to see that our Factfile has been updated at your suggestion. Thank you.

Dear PCT,

I think your 'software directory' is a great idea. I saw it first in your October issue and was going to complain about the lack of programs for the Acorn Atom, but I see you have rectified this in the December issue. I assume that this will be an ongoing feature and will build up over the months. For those who have missed some issues, will it be available as a separate item for sale and will the programs listed for just one computer be available separately?

I have just written a picture drawing program for my Acorn Atom which can store and load drawing information at a named file on tape (would you be interested in publishing this?) I have a small problem with this. The cassette handling commands for loading the picture do not seem to synchronise with the start of the data unless a 'tone leader' is being played when 'return' is pressed after the 'play tape' message. If the tape is blank it starts loading right away. Is this normal and if not is there any remedy?

Yours faithfully

John Howson

Editor's reply: First, the software checklist is a regular feature in PCT but because we receive so many entries for each computer we have to alternate some of the computers each month. At present we do not intend to publish each computer's individual software listing.

As far as your drawing program goes, I am afraid to say that when your blank tape starts loading as in the process you have just described it is abnormal. The only thing to do is to thoroughly re-read your Acorn Atom user manual and find out where you are going wrong. Alternatively consult your local user club for their advice. Good luck!

Dear PCT,

At the moment I'm waiting for my 48K Spectrum (which is my third micro) to arrive. As I know of two people that have sent off for a 48K Spectrum but actually received the 16K version, I would like to know if there is a program to test that all the 48K is there.

Yours hopefully
Graham Walden
Wolverhampton

PS Keep up the good work, I think your mag is great.

Editor's reply: The simple answer to this is: when your Spectrum is delivered look at the slot in the back of the machine and see whether or not it contains the extra memory board to make it up to 48K. If it's not there you've only got a 16K machine.

Dear PCT,

Why do you hate the BBC Micro? Each time I buy your magazine for a BBC listing, I find it is rubbish. Pete . . . (As far as I gathered the mistakes are:)
Lines 150-170 Postman 7 — — what are the missing characters?
Postman2
Line 510 is missing
Line 530 — — should it really be IF DIR% *less* than 6 — — or should it be more than?

There are probably other errors that I haven't found. And can't you update your Factfile — printers and disc drives have been around for months, as have other languages (Forth, Lisp, several Logos, BCPL). and CJE Evans doesn't make a carrying case anymore, sadly. And you list the expansion sockets a bit strangely — the A doesn't have A/D converter, B does (and you mention joysticks for other machines, which the B takes through the A/D converter).

I liked your software reviews, and I look forward to the disc reviews — but can't you get your listings right? The last time I complained I was assured that all listings would be dumped from a printer.

Yours sincerely
Douglas Weller

Editor's reply: I am sorry hear that you are so disappointed with PCT. Unfortunately, those dreaded bugs found their way into the system when Pete ran on the BBC — hence the printed result. We can only apologise, and request that if any of you did have trouble with Pete being Plastered just drop us a line (in an envelope marked Pete the Plastered Postman) and we will send you a corrected listing of this program. Also turn to Micro Answers to find the corrections.

I must point out that we do try and print listings direct from tried and tested programs. Sometimes this is impossible, and although run on our own computers (or those belonging to contributors) some listings have to be typeset.

This is partly due to the fact that many people send us programs which are merely hand-written and only invites errors, or the printouts provided are not at all suitable for reproduction.

So now is a good opportunity to ask you all to supply us with tapes of your programs (for easy and quick loading and testing) and a well-presented and easily-definable program listing.

Dear PCT,

I wonder if you would print some more computer programs, especially games, for the ZX Spectrum.

I am a school boy who can't afford to buy many programs that come in books and I am sure many other people and ZX Spectrum owners would appreciate it. I am hopefully getting a Spectrum by the end of January or February as a late Christmas present.

Yours faithfully
Miles Fletcher Brown

Editor's Reply: Each month we try to publish games, utility or educational programs for all the popular micro computers, including the ZX Spectrum. So keep your eyes peeled for Spectrum software.

SPECIAL OFFER on Colour Genie

We believe that the new Colour Genie home computer is the best value currently available...

Buy your Colour Genie from us for **£224** fully inclusive of V.A.T. Carriage and Insurance, and any one of the programmes listed below is yours for free. You will also be entitled to purchase 1 game per month for 5 years at 25% off our published prices.

SOFTWARE FOR COLOUR GENIE

SKRAMBLE — £8.95
Fly your ship through an underground complex and win £100. Other prizes include: Colour Genie joysticks, etc. Full details with programme or on written request (S.A.E. please).

EXTERMINATOR — £7.95
FORTRESS OF EVIL — £7.95
GRAPHICS MASTER — £7.95
Release full potential of Colour Genie graphics with this very easy to use programme.

GENMON — £12.95
All facilities you need and more in this good quality monitor.

WE INTEND TO PUBLISH AT LEAST ONE NEW ARCADE STYLE GAME FOR THE COLOUR GENIE EACH MONTH!

TRS 80 & GENIE SOFTWARE

EXTERMINATOR — £7.95
STAGE ONE . . . shoot the birds down and avoid missiles.
STAGE TWO . . . run out of 'safe area' and destroy eggs, avoid robots and mines.

REVERSI — £7.95
6 Skill levels make an easy to play but difficult to master game. A callenge to everyone.

FORTRESS OF EVIL — £7.95
A 3-D adventure where objects are manipulated via two word sentences. Your task is to find a Wizard and slay him. But he has his helpers.

DOUBLE AGENT — £12.95
A 3-D real time simulation with hundreds of characters and disguises Your task is to recover plans from an enemy's H.Q. Can be different each time you play, or you can save each game.

BASIC DEBUG — £12.95
If you write BASIC programmes or simply copy them from listings then this is the utility that will help you find those bugs. It enables simpler writing of programmes. Hours of misery avoided.

Please send me the following programme(s):
Basic Debug £12.95 Double Agent £7.95 Exterminator £7.95 Fortress of Evil £7.95 Genmon £12.95
Graphics Master £7.95 Reversi £7.95 Skramble £8.95

The word processor for the BBC micro

available now!

Wordwise

Model B

Without doubt the most sophisticated piece of software yet written for the BBC Micro. Wordwise contains all the usual word processing features enabling characters, words, sentences or any defined section of the text to be deleted, moved or copied from one part to any other part of the document. The more complex facilities such as search and replace or file handling commands are menu driven so that even a beginner can understand how to operate them.

Wordwise will work with whatever filing system is currently implementated.

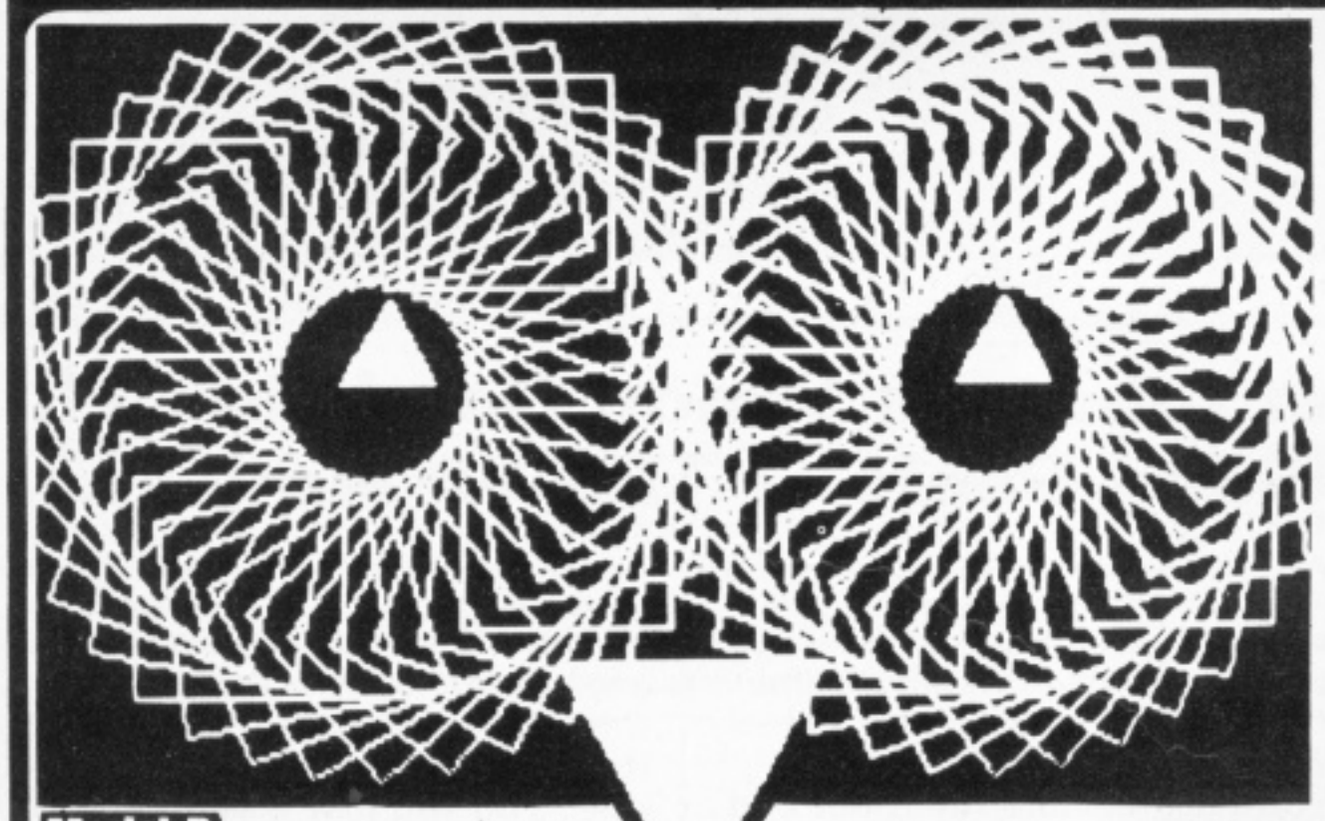

Supplied with full fitting instructions and a spiral bound manual.

We believe this word processor compares favourably with those costing many times as much.

£39.00+£1.50 p&p+vat

Technical details and order form are available from the address below.

Logo 2

The most complete implementation of the LOGO language yet available for the BBC Microcomputer. This language is now popular in American schools as an ideal educational program.

It graphically demonstrates the ideas of defined procedures, sub-routines, loops and even recursive programming. LOGO 2 is a much improved version of our original LOGO program and now works in different screen modes and includes the ability to list or delete defined words. These may also be saved on tape. This program will give an excellent introduction to Computers and the Logo language.

SOFTWARE

SNIPER

Outwit the malevolent robots in Simon Goodwin's all action game for the Video Genie or TRS-80 Model I.

Here is a game to pit your wits and reflexes against security robots at the top secret research headquarters of IBM (Intergalactic Business Mogul). You are looking through the giant mainframe computer-room, in search of interesting secrets, when you hear a rumbling noise from between the rows of processors and disc units . . .

You dive out of the way just in time as a hi-blast quarkon grenade rolls past you and detonates nearby. In the dimness you can just make out the glowing sensors of a security robot at the other end of the room. The robot's cybo-grip unit reaches behind and it primes another grenade, ready to roll it towards you. The bomb explodes prematurely, showering blue paint over the robot. Unperturbed, the security robot takes aim again.

You must disable the robot and any others which come to its assistance. To do this you are armed with a lightweight, high-resolution, laser rifle, but it is difficult to hit the robot as it dodges back and forth in the darkness at the other end of the computer room. Alternatively you could brave the grenades and attempt to sneak up and eliminate the robot with a sharp blow to its sensitive omniwave radiation sensors. The decision is yours; but hurry, because here comes another grenade . . .

Use the arrow keys or control keys to manoeuvre the sniper around the computer room. Press the space key to fire your laser rifle. You will lose a point every time you shoot (since you are wasting ammunition and drawing attention to yourself) and you lose a 'life' if you collide with a grenade. Points are awarded each time you sucessfully shoot the robot (the shorter the range the greater the score) and if you manage to 'mug' the robot and destroy its sensors. Be warned — you will be unable to shoot down the grenades with your rifle, and the robot will try to evade you if you creep up on it.

HOW IT RUNS

Lines 10-30 Identify the program and send the computer to the set-up routine at line 450.

Line 40 Introduces the routine for rolling bombs across the display. These lines form the main part of the program and consequently they have been placed at its head, where BASIC can find them quickly. The game would be about a third slower if the 'roll bombs' routine was at the end of the program.

Line 50 Selects the next bomb to be moved.

Lines 60-130 Check that the bomb has not yet hit the end wall of the computer room. If it has done so then a new bomb is launched.

Lines 140-160 Advance the bomb across the display.

Line 170 Checks to see whether or not the bomb has spontaneously exploded.

Lines 180-290 Reduce the number of lives if the bomb has hit the player.

Lines 300-430 Handle the hi-blast quarkon grenade explosions.

Lines 440-490 Part of the set-up routine for the game. They clear variable storage and the TRS-80 display. Lines 450 and 460 will not be needed on most computers. Adjust the value of BMAX to change the maximum number of bombs in action at any time. Its value must be a power of two (e.g. 1, 2, 4, 8 or 16).

Lines 500-560 Sets up the graphic characters that will be used in the game. Each item is assumed to be one character high and three characters wide.

Lines 570-680 Draw the walls of the computer room and populate it with chest freezer shaped machines.

Lines 690-730 Prepare the main recording variables of the game. These are P (player's position on screen for PRINTing), E (enemy's position), SC (score), B (bomb position) and LV (number of remaining lives).

Lines 740-760 Set the starting position of all bombs.

Lines 770-790 Label the display.

Lines 800-870 Form the main loop of the game. For simplicity it has been written in four parts. One part rolls the grenades, another allows the player to move, the third handles rifle-fire, and the final part controls the robot's movement.

Lines 880-940 Examine the keyboard (see 'Hints on Coversion') and adjust the player's position accordingly.

Lines 950-970 Punish the sniper if a bomb has been trodden upon.

Lines 980-1000 Blank out the old display of the sniper and set up the new one.

Line 1010 Checks whether or not the sniper has jumped on top of the robot. If so lines 1030-1110 modify the score and display accordingly.

Lines 1120-1190 Decide the robot's move. Line 1160 selects a new direction of movement (up or down) to home in upon the player.

Lines 1200-1210 Adjust the robot's position, preventing moves off the screen!

Lines 1220-1260 Set up the new display of the robot, blanking out the old one as required.

Lines 1270-1290 Handles rifle fire. Line 1280 determines whether or not the space key (fire) has been pressed and line 1290 excludes alternate lines of the display from use (those military-spec. cabinets are 100 per cent laser-proof!).

Lines 1300-1370 Display the laser-beam with an appropriate sound-effect. Line 1300 works out its length and 1370 checks whether or not the robot has been hit.

Line 1380 Allocates points in accordance with the distance between the sniper and the robot.

Lines 1390-1480 Illustrate the robot explosion in sound and vision.

HINTS ON CONVERSION

SNIPER is written in Microsoft 12K Z80 BASIC. As it is a graphic game a number of conversions must be made to enable it to be run on machines not compatible with the TRS-80 Level 2. The game uses the PRINT @ facility to place text and graphics on the screen. The TRS-80 display consists of 1024 characters. The character-code for each element is stored in memory between address 15360 and 16383. Consequently PEEK(15360) will return the ASCII code of the character in the left most position of the top line. PEEK (15487) does the same for the last character of the second line, and so on.

Each character-position has a number which is used as a reference for the PRINT @ command. The top left character position is numbered 0, through to 63 at the end of the line 1023 at the end of the screen. The display consists of 16 lines of 64 characters. For example PRINT @960, "SNIPER"; would cause the word to be displayed at the left-hand side of the last line of the screen.

The STRING$(X,Y) function returns X copies of the character with ASCII code Y. An equivalent function is available in BBC BASIC — on other machines you will have to set up a loop to generate the appropriate string using the CHR$ function.

SNIPER makes considerable use of the logical AND operation. This is available on most micros, but notably not the Apple or current Sinclair machines. A logical AND is used to tell the computer to ignore some of binary digits in a value. The value 30 is written 11110 in binary, and the value 19 is 10011, so that the expression 30 AND 19 has the binary value 100,10 or 18 decimal. (The 1 is copied in the columns where it appears in both numbers). Type PRINT 30 AND 19 on your computer to see if this feature is supported.

The program uses the AND function to generate random numbers. For example RND(3) generates (at random) 1,2 or 3. Long names are used for some string variables (e.g. PLAYER$) but these can be shortened to their first two characters (PL$) without ill-effect.

PEEK(14400) is used to poll the computer's keyboard. The game is controlled by pressing five keys. On a Video Genie you may use ESC and CTRL to move the sniper up and down the screen. If the keys are held down the sniper will move steadily. The CLEAR and TAB keys can be used to move left and right, the SPACE key cause a shot to be fired. If your computer has arrow-keys in place of ESC and CTRL, or CLEAR and TAB are not adjacent on your keyboard, then you can modify the program to recognise control from the arrows simply by changing line 900 so that it starts 'IF (KB AND 32)...'.

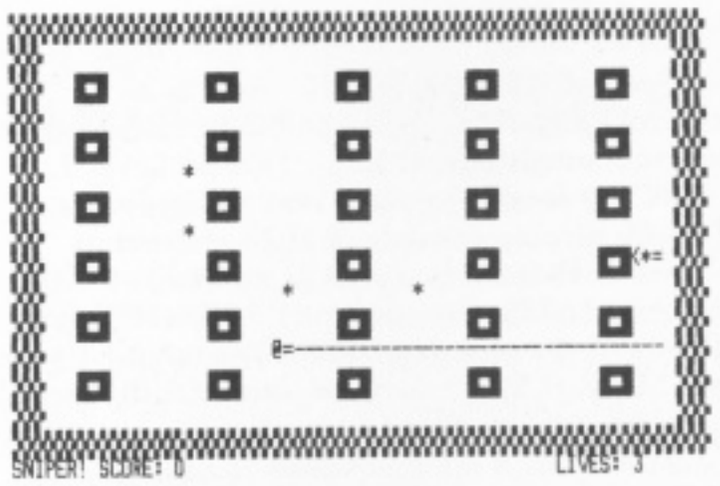

Sound-effects are generated as SNIPER runs. Program lines containing the OUT instruction are used to send noises to the Genie or TRS-80 cassette interface. These lines won't work on other computers but they may be missed out without harming the game.

NEW FOR THE TRS-80 AND VIDEO GENIE

FLOPPY DISC SYSTEMS EXPENSIVE?
CASSETTES SYSTEMS FRUSTRATING?

THEN YOU NEED THE

SOLO LOAD

Loads programs in less than one second. Save program in as little as two seconds. **NO MODIFICATIONS.**

Completely automatic, contains its own operating system. Anybody can use it — it's that simple to operate. So banish those cassettes and forget about expensive Disc Systems.

LOOK AT THESE UNIQUE FEATURES

Directory of Files — No need to remember names! Load File — Automatic search and load of programs. Load Data — Load Data into any memory locations. Save File — Automatically produces a 'named' file with all information the computer needs for instant reload. Save Data — Effectively an automatic 128K bits PROM Programmer i.e. no need to sectionalize programs into PROM sizes.
Multiple programs in single Rompack with overload prevention and auto verify. Does not use any user RAM space.

The **'SOLOLOAD'** is a new concept in Rompacks. It is unique in that it not only allows you to read pre-programmed Rompacks but create your own. The plug-in Rompacks are of course, **RE-USABLE.**

There are two forms of Rompack:

1. EPROM (2532's) for indefinite but re-usable storage.
2. Cmos RAM (with battery back-up) for long term but instantly alterable storage — ideal for program development.

The EPROM Rompacks have 128K bits storage capacity per pack. The Cmos Rampacks come in 64K and 128K versions. Bare boards are of course available so that any source of supply can be used.

TWO VERSIONS AVAILABLE

SOLOLOAD Read and write unit
SOLOREAD A read only unit for pre-programed Rompacks. Ideal for clubs. A range of pre-programmed packs will be available.

THE COST?

SOLOLOAD ..... **£125.00** COMPLETE
SOLOREAD **£35.00**

EMPTY ROMRACKS £10.00 64K RAMPACKS £62.50 128K RAMPACKS £99.95
SOLO READ POWER SUPPLY £8.69 EPROMS £4.50 (with ROMPACK)

• • FREE 'KANSAS CITY' PROGRAM • •

WITH SOLO LOAD ONLY

Discounts for clubs and educational establishments. **EX-STOCK DELIVERY**. Please add VAT.
For use with Model I Level 2 or EG 3003/4, i.e. up to 16K systems. + P&P

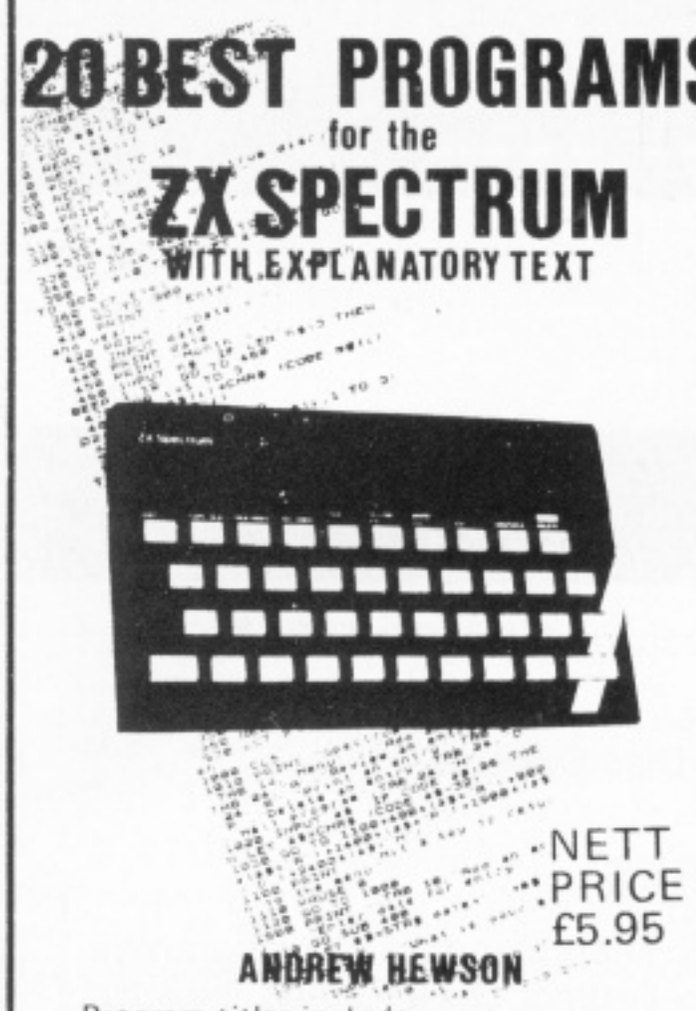

P.P. £2.50 PER ORDER

COMING SOON: Version for expanded systems. Version with Expansion Ram and Printer Intertace. Other computer systems, please enquire. WRITE FOR FULL DETAILS TO:

ANDREW HEWSON'S BOOKS

20 BEST PROGRAMS for the ZX SPECTRUM WITH EXPLANATORY TEXT

Mr HELPLINE — the man who answers your ZX queries in his column in Sindair User, the author of HINTS & TIPS FOR THE ZX80 and HINTS & TIPS FOR THE ZX81 now presents:

* 20 original programs for you to load into your Spectrum.

* 20 interesting programs for you to enjoy and learn from.

* 20 great programs to teach you about fixed and variable length records, binary searches, bubble sorts, graphic displays and much, much more . . .

Program titles include:

Machine Code Editor — Write, modify, extend and load machine code using this all-basic program. No need to use an Assembler when you have this program.

Index File — Learn about fixed length records, save numeric and string information, add to, sort, modify, delete and print your records. Ideal as a computer based filing system.

Duckshoot — Learn how to manipulate the attributes file *and* have fun at the same time.

Graphix — Construct up to 210 graphics characters with the full on-screen editing facilities, enhance and modify them and recall them later to build a detailed display to save on cassette.

Spiromania — A program to stretch your artistic talents, imagination and ingenuity. Draws a limitless variety of curves and spirals.

Plus: FOOTBALL, DIGITISER, DIARY and many more.

Available through Computer Bookshops and W.H. SMITH.

FOR THE SPECTRUM

40 BEST MACHINE CODE ROUTINES FOR THE ZX SPECTRUM £5.95

by Andrew Hewson and John Hardman.

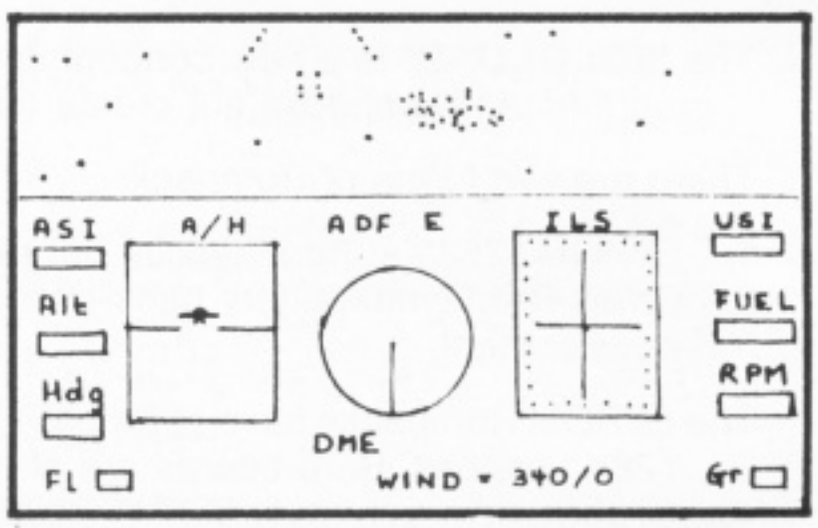

Section A: Three chapters explaining what you need to know about Z80 machine code on the Spectrum.
* How to load and save machine code.
* How to use the system variables.
* How memory is organised.
* How program lines are stored.
* How to use the stack, the display, the attribute files.
* How to call ROM routines — where they are and what they do.
* The structure of Z80 code — plus a valuable glossary.

Section B: 40 routines including,
* Scroll — up, down, side to side by pixel or by character.
* Search and replace, token swap, string search.
* Rotate character, invert character — horizontally and vertically.
* Line remember — including GOSUBs, GOTOs, RUN etc.

All routines are relocatable (except 'line remember')

This book teaches the beginner all he needs to know in a simple, easy-to-learn form and its an invaluable reference work for the expert too!

NIGHTFLITE FOR ZX SPECTRUM £5.95

Fly your own aircraft from take off to landing via navigational beacons, over mountains and using a fully detailed direction finding and instrument landing system. *You are the Pilot of a light aircraft flying at night. *You must use your skill and judgment to fly your aircraft accurately over radio beacons and then land safely on the runway *Hazards are mountains and cross winds *Instruments: Artificial Horizon, Non Directional Beacon, VHF Omnidirectional Range, Instrument Landing System *Readouts: Gear, Flap, Air Speed, Distance Measuring Equipment, Vertical Speed, RPM and heading *Visual display of runway on approach *5 Modes from Take off to Autopilot *Happy landings *

Z80 OP CODES £1.45

A must for the beginner and the experienced programmer alike. This hand ready reckoner lists all 600 plus Z80 machine code instructions in decimal and hexadecimal with their mneumonics. Each Op Code is succinctly explained and cross-referenced. Supplied in a protective transparent wallet for easy reference and durability.

PILOT ZX81 £5.95

Essentially the same as Nightflite but without the hi res graphics.

PUCKMAN ZX81 £5.95

All action display. Best score to date, scour the maze for food, dodge the ghost, eat a strawberry and attack the ghosts.

HINTS & TIPS FOR THE ZX81 £3.95

Available by direct mail order or through computer bookshops and W.H. Smith.

THE PROGRAMS

The programs advertised here are available from computer bookshops with a software stand, and many independent micro-computer shops.

RETAILERS

We are continually on the look out for new outlets. If you are interested in stocking the items advertised here, write to us for our trade rates.

URGENT

We require high quality Spectrum and Dragon software. Good royalties paid. Send your samples today for fast evaluation.

PCT MARCH

SOFTWARE COMPETITION

Let's face it, software is what really matters when it comes to computing and the more you have the better.

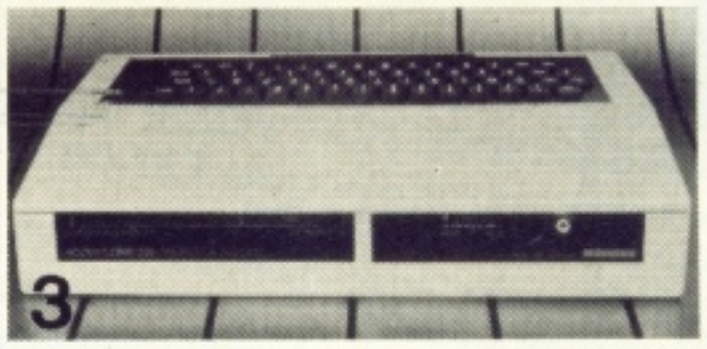

And up for grabs this month in our competition is £££££s worth of software for your computer.

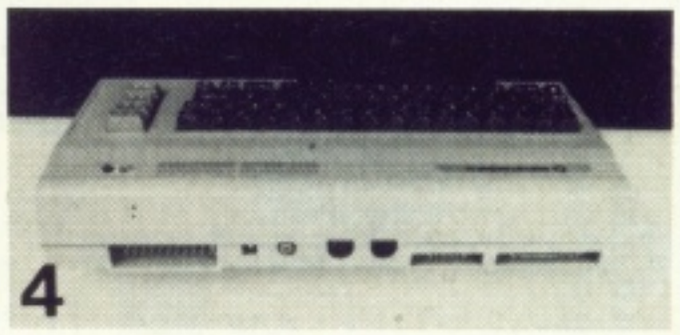

To win it all you have to do is correctly identify the different parts of the computers shown in the pictures below. Don't worry — we have specially chosen machines which are well-known so that if you don't own one particular computer pictured it will be fairly easy to find out from books if you're stuck for the answer.

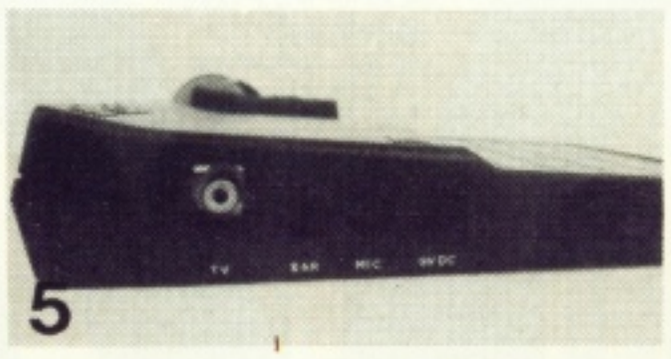

When you've worked out what each picture is just fill in the form entering what you think each answer is against the appropriate number. Fill in your name and address on the form (entries are only valid if completed on the form) and tell us what computer you own.

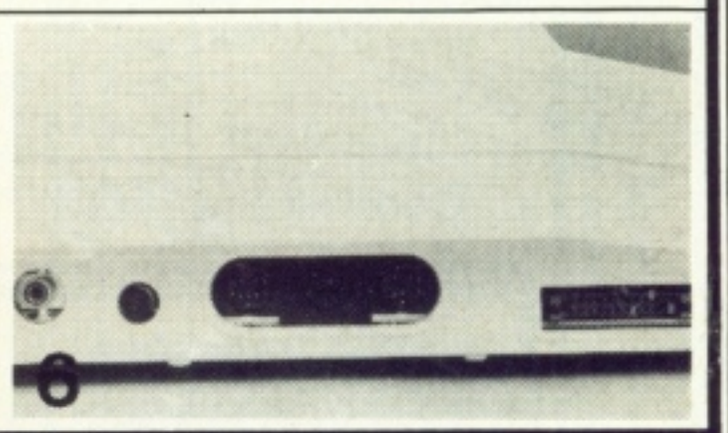

RULES

This competition is open to all UK and Northern Ireland readers of Personal Computing Today except employees of Argus Specialist Publications Ltd, their printers, distributors, or anyone associated with the competition.

All entries must be submitted on the coupon cut from the magazine — photocopies will not be accepted.

As long as the correct coupon is used for each entry, there is no limit to the number of entries you may submit.

All entries must be postmarked before 31st March 1983.

No correspondence will be entered into with regard to the results and it is a condition of entry that the Editor's decision is final.

The winner will be notified by post and the results will be published in a future issue of Personal Computing Today.

Address your answers to: **PERSONAL COMPUTING TODAY**

Envelope and Character Definer. (32k)

Together these utility programs offer a complete character and sound envelope defining package for the BBC Micro. Even if you fully understand both the envelope and character defining commands, these programs will make their definition quicker and more accurate.

BEEBUG AND COMPUTER USERS CLUB MEMBERS 5% DISCOUNT

Side 1

ENVELOPE DEFINER
- Excellent use made of graphics windows and colour to display pitch and volume
- Database containing 20 predefined envelopes of everything from phasers to explosions
- Example graphs and step by step prompts allow easy defining of your own sound envelopes

Side 2

CHARACTER DEFINER
- A very nice VDU23 character definition program — *Computer Users Club (GB).*
- Shows both magnified and true size characters as they are defined
- All other definable characters can be called up for display
- Easy to use and check performed on all input

Recorded on quality cassettes, sent by first class post

INTRODUCTORY PRICE £4.95. Dealer Enquiries Welcome or just £3.35 + the incomplete cassette lead supplied with your Micro.

CASSETTE LEADS

DRAGON 32 **£3.95** *Type* (1) Computer to 5 pin din. (2) Computer to two 3.5mm plugs and one 2.5mm plug

SOFTWARE

CASH FLOW

Keep your cash flowing smoothly with Ron Caver's analysis program.

If you want to know which month

to the penny, but rather an

onthly
ly bank
ound, over
ar. As with
ense and
ered to allow
f' situations.

When you have typed in the program, enter RUN 1810 and you will see a prompt for the number of expense categories. This has an upper limit of eleven to keep the display routine simple and should be adequate for general household expenses. When you receive the

UNS

160 — 180	Loop to total each expense catagory for the month.
190	Add each month's salary into years total.
200	Calculate net income for the month.
210	Calculate closing balance for the month.
220	Add net monthly income into years total.
230	Add total monthly expenses into years total.
240	Transfer closing balance each month to opening balance next month except December.
260 — 310	Loop to total each expense category for the year.
270	Reset each expense category year total to zero.
280 — 300	Loop to add each expense category across to find total for year.
320 — 330	Transfer January opening balance and December closing balance to total column.
350 — 370	**RULE A LINE FOR DISPLAY**
400 — 480	**VERIFY DATA ROUTINE**
420	Accepts NEWLINE for zero.
430 — 470	Ensures input is an integer between 0 and 999.
1000 — 1070	**SAVE DATA SECTION**
1080 — 1210	**DISPLAY DATA SECTION**
1100	Print three month's headings.
1110	Call 'Rule a line' routine.
1120 — 1190	Loop to print each category name held in C$ array and all data held in A array.
1140 — 1170	Measures the length of each element of the data array, as if it were a string, and tabulates the printing so that the numbers are justified from the right.
1180	Call 'Rule a line' routine.
1200	Commands available.
1220 — 1260	**SELECT COMMAND CHOSEN**
1270 — 1330	**CHANGE VIEW OF DISPLAY**
1290 — 1300	Verify input as a month number.
1320	Adjust, if required, to avoid display crash. (If M was set to 11 or 12, the program would attempt to print months 13 and 14 at lines 1100, 1150 and 1160).
330	Pass control to display section.
340 — 1590	**CHANGE/ENTER DATA**
350 — 1360	Prompt for a starting month number.
370 — 1400	Verify input as a month number, or zero.
1380	If input is zero, returns control to display section, after totalling all data.
1410	Prompt for an end month number.
1420 — 1450	Verify input as a month number.
1460 — 1470	Prompt for a category number.
1480 — 1500	Verify input as a category number, or zero.
1485	If input is zero, returns control to start month prompt.
1490	Prevent access to totals and balances except for January opening balance.
1510	Prompt for new amount.
1520	Verify input.
1530 — 1550	Loop to enter new amount into the category specified, for the month(s) specified.
1560	Pass control back to category number prompt.
1570	Call 'Totalling' routine.
1580	Adjust to avoid display crash.
1590	Pass control to display section.
1800 — 2200	**INITIALLISATION**
1810	Prompt for number of categories.
1820 — 1830	Verify input.
1850	Set E as number of expense categories.
1860 — 1900	Set pointers for position in data array of totals and balances.
1910 — 1930	Dimension arrays.
1940 — 1960	Loop to prompt and accept input for category names.
1970 — 1990	Category numbers automatically entered into C$ array.
2010 — 2070	Total and other headings set into C$ array.
2080 — 2140	Set month names into M$ array.
2160 — 2190	Save program list with arrays.
2200	Pass control to display section.

Note: All statements to PRINT AT line 20 to 21, should contain 32 characters, so spaces should be added where necessary to ensure the screen prompts overwrite one another. The exception is statement number 1410 which needs 19 spaces after the "?".

prompts to enter the category names, you will have six spaces each and some suggestions for these are shown with the variables list. When the final name is entered, you will be invited to SAVE the listing and afterwards the option to view the data is given. If you wish, this is a good point to STOP the program and delete the now superfluous lines (1800 to 2200) used for initialisation — this is purely to save those precious seconds when SAVEing and LOADing and they will not affect the running of the program if left in the listing. (Note: if you do delete these lines, restart the program by GOTO 1060 and *not* by RUN.)

Having got back to the option to see the data, press NEWLINE and after a few seconds you should see a display showing your expense and various other headings on the left, then totals for each catagory for January, February and March, followed by a total column on the right which will display the yearly totals. By entering the command 'V' for view and month number you can change the display to see any set of three consecutive months. The end column will always display the yearly totals. At present all the totals will be set to zero and the next step is to enter your expected spending requirements for the calendar year. Enter command 'C' for change and then follow the screen prompts — some useful hints are:

a) Deal first with those catagories which have a fixed monthly figure — eg if you have standing orders of £100 to pay from March to December, then when prompted, enter month number 3 to start and month 12 to end. The category number and amount then completes the entry for the entire ten months.

b) One-off expected bills are best entered a month at a time — eg for February enter month 2 to start and month 2 to end. Then you can enter or amend as many category totals as you wish for that month.

c) The first time you use the command 'C', you will need to enter your opening cash or bank balance for January — this is the only total balance that the program will allow you to directly access, all the others are calculated by the program.

d) The program will accept NEWLINE for zero entries.

The display totals will remain at zero during this operation but once completed, and the display requested, the totalling routine at line 40 is called and the current display is cleared and reinstated, showing all the new totals.

As you progress through the year, each months budgetted figures can be adjusted to reflect your actual spending, and the estimated future balances will be re-calculated accordingly. (The SAVE 'S' command should be used at this point so that you can preserve the data for the following months up-dates).

If your expenses exceed your salary for any given month, your net income will be shown as a minus figure — as will your actual balances if you 'go into the red'. When you approach the end of the calendar year, simply set up another file using the basic program listing first SAVEd, and enter the projected closing balance for the current year as the opening balance for your new year predictions. The program will run on the ZX80 (8K ROM) without conversion, as it is best run in FAST mode to avoid long delays during totalling and printing the full data. However, if you own a ZX81 and prefer a steady screen during input, run the program in SLOW mode with the following changes.

```
1570 FAST
1575 GOSUB 110
1195 SLOW
1935 SLOW
2185 FAST
```

HINTS ON CONVERSION

Sinclair string handling is excellent, but differs from some others in declaration and slicing.
e.g. DIM M$(100) will reserve 1 string, a 100 spaces long.
DIM M$(12,3) will reserve 12 strings each 3 spaces long.
So read lines 1910 to 1930 and adjust your statements accordingly. If your machine has RIGHT$, LEFT$ & MID$ here are some examples of other changes needed:

```
2120        LET M$(K) = MID$(D$,J,3)
2020        LET LEFT$ (C$,S,2) = STR$ S
```

If you have READ/DATA facilities you could change:

```
2090        DATA JAN,FEB,etc
2120        READ M$(K)
```

and lines 2100 & 2130 could then be deleted.

The display is designed to fit 32 columns of 22 lines. Extra months can be displayed, if you have a wider screen, by adding extra TAB statements where appropriate:

```
1100        .....TAB: M$(M + 3) etc
1162        PRINT TAB 31; .....(M + 3) etc
```

Increase TAB figures by 6 each time and don't forget to adjust lines 1320 to 1580.
Less than 22 lines means you will have to make economies on your expense categories and an adjustment to line 1830.
The codes used in line 440 are not standard ASCII. They test that the characters in the string V$ fall between 0 and 9, so replace these with codes appropriate to your machine.

E	= Number of Expense categories.
T	= Array marker for expense Totals.
S	= Array marker for salaries.
N	= Array marker for net income.
B	= Array marker for opening balance.
C	= Array marker for closing balance.
J	= Loop counter to mark data array.
K	= Loop counter to mark data array for calendar months.
M	= Array marker for month to be printed or changed.
ME	= Array marker for end month to be changed.
V$, V	= Temporary store for inputted values whilst verifying.
D$	= Temporary store for month names.
A(13,C)	= Main array to store all data.
C$(C,9)	= String array to hold category names.
M$(12,3)	= String array to hold month names.

Sinclair ZX Spectru

16K or 48K RAM... full-size moving-key keyboard... colour and sound... high-resolution graphics...

From only £125!

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power– personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can uprate later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour – 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound – BEEP command with variable pitch and duration.
- Massive RAM – 16K or 48K.
- Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set – with upper- and lower-case characters.
- Teletext-compatible – user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC – incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

rum

The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing by providing mass on-line storage.

Each Microdrive can hold up to 100K bytes using a single interchangeable storage medium.

The transfer rate is 16K bytes per second, with an average access time of 3.5 seconds. And you'll be able to connect up to 8 Microdrives to your Spectrum via the ZX Expansion Module.

A remarkable breakthrough at a remarkable price. The Microdrives will be available in the early part of 1983 for around £50.

How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard, Access or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

ZX Spectrum software on cassettes – available now

The Spectrum software library is growing every day. Subjects include games, education, and business/household management. Flight Simulation...Chess...Planetoids...History...Inventions...VU-CALC...VU-3D ...Club Record Controller...there is something for everyone. And they all make full use of the Spectrum's colour, sound, and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

ZX Expansion Module

This module incorporates the three functions of Microdrive controller, local area network, and RS232 interface. Connect it to your Spectrum and you can control up to eight Microdrives, communicate with other computers, and drive a wide range of printers.

The potential is enormous, and the module will be available in the early part of 1983 for around £30.

Tel: Camberley (0276) 685311.

Sinclair ZX Spectrum–technical data.

Dimensions

Width	233 mm
Depth	144 mm
Height	30 mm

CPU / memory

Z80A microprocessor running at 3.5 MHz. 16K-byte ROM containing BASIC interpreter and operating system.

16K-byte RAM (plus optional 32K-byte RAM on internal expansion board) or 48K-byte RAM.

Keyboard

40-moving-key keyboard with full upper and lower case with capitals lock feature. All BASIC words obtained by single keys, plus 16 graphics characters, 22 colour control codes, and 21 user-definable graphics characters. All keys have auto repeat.

Display

Memory-mapped display of 256 pixels x 192 pixels; plus one attributes byte per character square, defining one of eight foreground colours, one of eight background colours, normal or extra brightness and flashing or steady. Screen border colour also settable to one of eight colours. Will drive a PAL UHF colour TV set, or black and white set (which will give a scale of grey), on channel 36.

Sound

Internal loudspeaker can be operated over more than 10 octaves (actually 130 semitones) via basic BEEP command. Jack sockets at the rear of computer allow connections to external amplifier/ speaker.

Graphics

Point, line, circle and arc drawing commands in high-resolution graphics.
16 pre-defined graphics characters plus 21 user-definable graphics characters. Also functions to yield character at a given position, attribute at a given position (colours, brightness and flash) and whether a given pixel is set. Text may be written on the screen on 24 lines of 32 characters. Text and graphics may be freely mixed.

Colours

Foreground and background colours, brightness and flashing are set by BASIC INK, PAPER, BRIGHT and FLASH commands. OVER may also be set, which performs an exclusive–or operation to overwrite any printing or plotting that is already on the screen. INVERSE will give inverse video printing. These six commands may be set globally to cover all further PRINT, PLOT, DRAW or CIRCLE commands, or locally within these commands to cover only the results of that command. They may also be set locally to cover text printed by an INPUT statement. Colour-control codes, which may be accessed from the keyboard, may be inserted into text or program listing, and when displayed will override the globally set colours until another control code is encountered. Brightness and flashing codes may be inserted into program or text, similarly. Colour-control codes in a program listing have no effect on its execution. Border colour is set by a BORDER command. The eight colours available are black, blue, red, magenta, green, cyan, yellow and white. All eight colours may be present on the screen at once, with some areas flashing and others steady, and any area may be highlighted extra bright.

Screen

The screen is divided into two sections. The top section – normally the first 22 lines – displays the program listing or the results of program or command execution. The bottom section – normally the last 2 lines – shows the command or program line currently being entered, or the program line currently being edited. It also shows the report messages. Full editing facilities of cursor left, cursor right, insert and delete (with auto-repeat facility) are available over this line. The bottom section will expand to accept a current line of up to 22 lines.

Mathematical operations and functions

Arithmetic operations of +, –, ×, ÷, and raise to a power. Mathematical functions of sine, cosine, tangent and their inverses; natural logs and exponentials; sign function, absolute value function, and integer function; square root function, random number generator, and pi.

Numbers are stored as five bytes of floating point binary – giving a range of $+3 \times 10^{-39}$ to $+7 \times 10^{38}$ accurate to $9\frac{1}{2}$ decimal digits.

Binary numbers may be entered directly with the BIN function. =, >, <, >=, <= and <> may be used to compare string or arithmetic values or variables to yield 0 (false) or 1 (true). Logical operators AND, OR and NOT yield boolean results but will accept 0 (false) and any number (true).

User-definable functions are defined using DEF FN, and called using FN. They may take up to 26 numeric and 26 string arguments, and may yield string or numeric results.

There is a full DATA mechanism, using the commands READ, DATA and RESTORE.

A real-time clock is obtainable.

String operations and functions

Strings can be concatenated with +. String variables or values may be compared with =, >, <, >=, <=, <> to give boolean results. String functions are VAL, VAL$, STR$ and LEN. CHR$ and CODE convert numbers to characters and vice versa, using the ASCII code.

A very powerful string slicing mechanism exists, using the form a$ (x TO y).

Variable names

Numeric – any string starting with a letter (upper and lower case are not distinguished between, and spaces are ignored).
String – A$ to Z$.
FOR-NEXT loops – A-Z.
Numeric arrays – A-Z.
String arrays – A$ to Z$.

Simple variables and arrays with the same name are allowed and distinguished between.

Arrays

Arrays may be multi-dimensional, with subscripts starting at 1. String arrays, technically character arrays, may have their last subscript omitted, yielding a string.

Expression evaluator

A full expression evaluator is called during program execution whenever an expression, constant or variable is encountered. This allows the use of expressions as arguments to GOTO, GOSUB, etc.

It also operates on commands allowing the ZX Spectrum to operate as a calculator.

Cassette interface

The ZX Spectrum incorporates an advanced cassette interface. A tone leader is recorded before the information to overcome the automatic recording level fluctuations of some tape recorders, and a Schmitt trigger is used to remove noise on playback.

All saved information is started with a header containing information as to its type, title, length and address information. Program, screens, blocks of memory, string and character arrays may all be saved separately.

Programs, blocks of memory and arrays may be verified after saving to confirm successful saving.

Programs and arrays may be merged from tape to combine them with the existing contents of memory. Where two line numbers or variables names coincide, the old one is overwritten.

Programs may be saved with a line number, where execution will start immediately on loading.

The cassette interface runs at 1500 baud, through two 3.5 mm jack plugs.

Expansion port

This has the full data, address and control busses from the Z80A, and is used to interface to the ZX Printer, the RS232 and NET interfaces and the ZX Microdrives.

IN and OUT commands give the I/O port equivalents of PEEK and POKE.

ZX81 compatibility

ZX81 BASIC is essentially a subset of ZX Spectrum BASIC. The differences are as follows.

FAST and SLOW: the ZX Spectrum operates at the speed of the ZX81 in FAST mode with the steady display of SLOW mode, and does not include these commands.

SCROLL: the ZX Spectrum scrolls automatically, asking the operator "scroll?" every time a screen is filled.

UNPLOT: the ZX Spectrum can unplot a pixel using PLOT OVER, and thus achieves unplot.

Character set: the ZX Spectrum uses the ASCII character set, as opposed to the ZX81 non-standard set.

ZX81 programs may be typed into the ZX Spectrum with very little change, but may of course now be considerably improved. The ZX Spectrum is fully compatible with the ZX Printer, which can now print out a full upper and lower case character set, and the high resolution graphics; using LLIST, LPRINT and COPY.
ZX81 software cassettes and the ZX 16K RAM pack will not operate with the ZX Spectrum.

Software from PCT

ADVENTURE GAMES

THE WHITE BARROWS Program approximately 8K
Somewhre amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two! Your magic staff will block the tunnel to prevent him escaping . . . unless, that is, he outwits you.
A real brain-twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon and they don't hack easily!

CONQUERING EVEREST Program approximately 11K
So you think climbing mountains is all about scrambling over rocks? This superb piece of programming will soon change all that.

You are in charge of an expedition comprising 18 climbers, 34 Sherpas, and 40 Porters. There is food, tents and equipment for all, including the oxygen you'll need as you near the summit. Trouble is, it all starts at the BOTTOM of the mountain and you'll have to get it all to the TOP! Each upward route must be forced and any camp you make must be properly supplied, otherwise the expedition members will retreat down the mountain.

The monsters in this game are avalanches, starvation, storms and, worst of all, bad planning! A real thinking man's adventure, Everest will test your skill and forward planning to the limit.
PRICE: £11.45 all inclusive.

KILLING MONSTERS AND MAKING MONEY ISN'T EASY!

CELLS AND SERPENTS Approximately 11K
More monsters than you ever thought could fit behind your keyboard. Wander the halls in search of gold and glory but be very, very careful where you tread! There are things here which make your wildest nightmares look like Julie Andrews! Fancy meeting a Mind Plyer for example? Or shaking hands with Asmodeus maybe? Treasure is here to be found . . . the HARD way.

STOCKMARKET Approximately 11K
There are other ways of making money than bashing Trolls on the head. Try this one for a change. Contend with a fluctuating economy, tax investigations, bullish opponnents, impatient bank managers and consortium takeovers as you try to make your first million.

It is decidedly difficult and definitely compulsive. A must for all those aspiring financial wizards, both young and old. Easy to play but harder to beat than a Dragon. Up to six players can join in too.
PRICE: £11.45 all inclusive.

MOVING THE HARD WAY

LADDERS AND WALKWAYS VIC-20 6.5K
Beat the monsters on your journey up through several walled levels in a frantic but fun game based on the original arcade game. Move your man quickly or the monsters will trap and kill him.
MELODY MAKER VIC-20
Turn your VIC into a musical synthesiser with our easy to use program. With it you can build up your own tunes to suit your personal taste in music.

PRICE: £8.50

PETE THE PLASTERED POSTMAN BBC Model A & B
Guide your drunken postman as he totters on his way delivering parcels and avoid the vicious dog which is out attack him at ankle level.
ASTEROID LANDER BBC Model A & B
Your task in this space game is to fly your ship through an asteroid storm and land the craft safely on an outer galaxy planet's surface. Tackle the space lanes with the help of your BBC A or B computer.
PRICE: £8.50

Please send me tape(s) of:

TECHNICAL ENQUIRIES

MICROANSWERS is Personal Computing Today's Technical Enquiries Service. Each month we will endeavour to answer your questions on the subject of micro-computing. We would love to hear of your problems (honest!) as it is certain that if *you* are having trouble then other users of your machine will also be suffering.

So here's your chance to lighten your burden by sharing your troubles with Personal Computing Today's panel of experts.

Address your letters to:
"Micro Answers"
Personal Computing Today
ASP Ltd
145 Charing Cross Road
London WC2H 0EE

If you wish a personal reply, please enclose a stamped addressed envelope *and the reply coupon from this page*. This is to enable us to give priority to regular readers of PCT.

Dear PCT
I own a TRS-80 Model 1, Level II and I am an absolute beginner with computers. I have tried to program it to pick words beginning with a chosen letter out of a list of 20 words. I tried the following program:

```
5    CLS
10   DIM A$(20)
20   INPUT B$
30   FOR X = 1 TO 20
40   READ A(X)
50   IF LEFT$(A$(X),1) = B$ PRINT A$(X)
60   NEXT X
70   GOTO 20
500  DATA (A LIST OF 20 WORDS)
```

On initial input it works perfectly, but on next INPUT I get an OUT OF DATA ERROR. I have tried increasing the DATA list and moving the INPUT command but nothing works. Could you help me with the following:

a) Why am I getting the error?
b) How can I make it work?

M. Thomas
Gwynedd

There are two solutions to your problem and you are half-way between the two with the program you have written. To start with, the reason you are getting the OUT OF DATA ERROR is that after one run through the program you are not resetting the data pointer. This is a pointer created by the computer to tell it where the next piece of DATA is to be read from. When you cycle through your program for the second time, the computer, having already READ the 20 words cannot find anymore DATA to READ. This can be remedied by adding the following line:

```
65   RESTORE
```

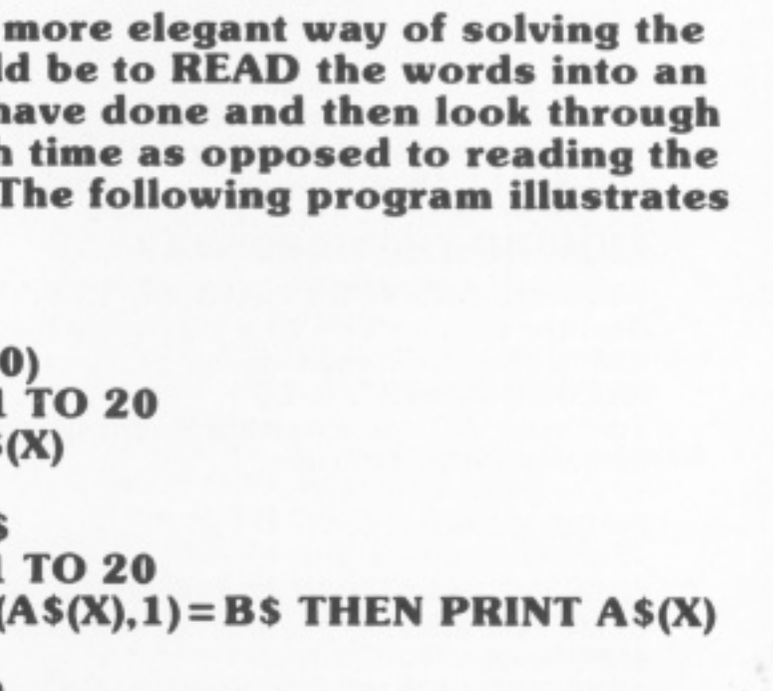

This command will set the DATA pointer back to the first item of DATA, enabling you to READ the 20 words again.

A slightly more elegant way of solving the problem would be to READ the words into an array as you have done and then look through the array each time as opposed to reading the DATA again. The following program illustrates this:

```
5    CLS
10   DIMA$(20)
20   FOR X=1 TO 20
30   READ A$(X)
40   NEXT X
50   INPUT B$
60   FOR X=1 TO 20
70   IF LEFT$(A$(X),1)=B$ THEN PRINT A$(X)
80   NEXT X
90   GOTO 50
100  DATA (A LIST OF 20 WORDS)
```

Address .....
.....
.....
.....
.....

Dear PCT
As a newcomer to the mysteries of computer programming I would be most grateful if you could suggest what alteration I should make to the enclosed program in order to run it on the unexpanded VIC 20.

This is a very short program called Character Presentation. In it, each of the component letters of the words contained in A$ should be printed out in their correct order from left to right, at the speed preset in line 40. The additional lines 55,70,80,90 do the same for words instead of sentences.

Looking at the program, with my scant knowledge of BASIC, it would appear to be straightforward and logical as written, but when I attempt to RUN it I keep getting the infuriating 'Bad Subscript error in 30' message on the screen.

Referring to this error message in my machine manual I am informed that the program was trying to reference an element of an array that was outside the limit specified in the DIM statement.

As there is no DIM statement in the program, and even if I add, say DIM A$(30) for instance, it does not appear to make any difference.

The significance of 'IF A$(A) = CHR$(0)' in line 55 also escapes me, as there appears to be no value given for CHR$(0) in the CHR$ code listing in the manual.

I know the solution will be a simple one when you explain it, but the annoying thing about it is that with my limited knowledge of BASIC, I don't seem able to work it out for myself.

```
10   INPUT A$
20   FOR A = 1 TO LEN(A$)
30   PRINT A$(A);
40   FOR B = 1 TO 20
50   NEXT B
60   NEXT A

55   IF A$(A)  =  CHR$(0) THEN GOTO 80
70   STOP
80   IF INKEY$ = "C" THEN GOTO 60
90   GOTO 80
```

G. Beattie
Maidenhead

The problem that you have here is one commonly encountered by people converting between dialects of BASIC. Although line 30 is perfectly feasible in many BASICs it does in fact mean something totally different to what you had assumed. In this context, line 30 is performing the same function as the MID$ command does in other BASICs.

This line takes one letter from the string A$, at position 'A' and will PRINT it on the screen. So, to make the program work on your VIC 20, you must change line 30 to read:

30 PRINT MID$(A$,A,1);

This will move along the string A$ one character at a time and PRINT out the appropriate character. Line 80 should be changed to:

80 GET A$: IF A$ = "C" THEN 60

And line 55 should be changed to:

55 IF MID$(A$,A,1)= " " THEN GOTO 80

This will now look for a space in your input string and if it finds one it will give you the option of pressing 'C' to continue.

Dear PCT
I have recently taken delivery of my 16K Spectrum and having now recovered from the shock I have set about exploring its graphics capabilities. My problem lies in the area READ and DATA. I understand the use of USR + BIN numbers to produce certain graphics and that incorporating BIN numbers into a DATA list would make them rather long, although this can be done as shown in the Sinclair manual.

In some programs I have seen DATA lists consisting of a series of numbers from one to three digits long are used to produce graphics. One example from Richard Altwasser's 'Cambridge Collection' book showed the following line:

```
3000 DATA 0,0,0,0,0,224,224,224: FOR Q = USR"A"
TO USR"A" + 7: READ A: POKEQ,A: NEXT Q:
RETURN
```

This line produced a square at the centre of a maze. There are numerous other examples in Altwasser's book and some in the Sinclair manual (for which no explanation is offered !!!). The fact that they are in groups of eight leads me to assume that they relate to BIN numbers in some way. But how I don't know?
D. Slinn
Bristol

All these numbers are the decimal equivalent of the binary numbers that you see in the Bin statement. For a more in-depth analysis of how the user-defined characters work on the Spectrum you should read the article on them in the October 1982 issue of *Personal Computing Today*.

Meanwhile here is a brief explanation of those numbers. All the characters on the Spectrum are made up of eight rows of eight dots. Each of these rows can be represented by the pattern of one's and zero's in the Bin statement. If you think of the one as representing a dot in the character and the zero as representing a space you should be able to see the correlation between the BIN statement and the character.

To convert the BIN statement into a single decimal number is easy. Starting from the left of the BIN statement label each position from 0 to 7. If there is one in the BIN number then write its value down as two raised to the power of its position number. If you then add these numbers together you will have the decimal equivalent of the binary number.

WHOOPS!!

It seems that the office gremlins had a field day in our January issue. Working under cover of night they attacked our Pete the Plastered Postman listing and made off with a number of lines and symbols from the page. However we launched a counter-attack and recovered the missing lines which are as follows:

```
150  K = 30 *2↑I
160  F = 3 *4↑I *4 ↑J
170  IF J = 2 THEN F = 15 *4↑I
240  VDU 23,236,136,112,80,0,0;0;

510  IN% = ASC(INKEY$(0))
530  IF DIR% >6THEN DIR% = DIR% – 7 ELSE IF
     DIR% <0 THEN DIR% = DIR% + 7
```

BBC FORTH

"rqFORTH" runs on BBC A or B and costs only £15, including its 70 page manual. It:

* needs no added hardware;
* runs up to 10 times faster than BBC BASIC;
* includes full screen editor tailored for the BBCpu;
* is FORTH-79 STANDARD and has fig-FORTH facilities;
* provides 260 FORTH words;
* is infinitely extensible;

Spectrum BBC nascom adventures

Colossal Adventure: The classic mainframe game "Adventure" with all the original treasures & creatures & 70 extra rooms.

Adventure Quest: Through forest, desert, mountains, caves, water, fire, moorland and swamp on an epic quest vs Tyranny.

Dungeon Adventure: NEW! The dungeons of the Demon Lord have survived His fall. Can you get to their treasures first?

Every Level 9 adventure is packed with puzzles and has over 200 individually described locations - a game can easily take weeks to complete! Only data and code compression allow so much to be provided.

Each adventure needs 32K and costs £9.90, including P&P/VAT.

Send order or SAE for catalogue, describing your computer, to:

ROMIK PROMISE A MINIMUM OF ONE NEW GAME EVERY MONTH

Britain's leading games software house are proud to announce our new range of exciting games and other software for Vic20, DRAGON and ZX81 (see panels) (Games for BBC, Spectrum and Atari available soon.)

ALL ACTION GAMES CARRY A FREE ENTRY TO NATIONWIDE COMPETITIONS WITH FANTASTIC PRIZES
ALL PROGRAMS ARE £9.99

MARTIAN RAIDER

For unexpanded Vic20

Skim as close as you dare to the surface of the planet, devastating the Martian cities, destroying ammunition dumps (gaining more time), shooting down the ground-to-air missiles

"A real action shot of the game"

MOONS OF JUPITER

For expanded Vic20, 3K, 8K or 16K

You are the Commander of a fleet of destroyers looking on from the safety of a mother ship, you send in one destroyer at a time to blast a passage through the **MOONS OF JUPITER. Your destroyers have to dodge, and blast the UFOs . . . Watch out for the Gologs** they can smash your destroyers, but you cannot harm them.

A MACHINE CODE ARCADE QUALITY GAME

MIND TWISTERS

For unexpanded Vic20
Four games to stretch your brain

Blackjack, Decipher, Four Thought and Teaser are our computerised versions of very popular home games and will test your mental agility and skill for many a long hour.

SUPER NINE ZX81

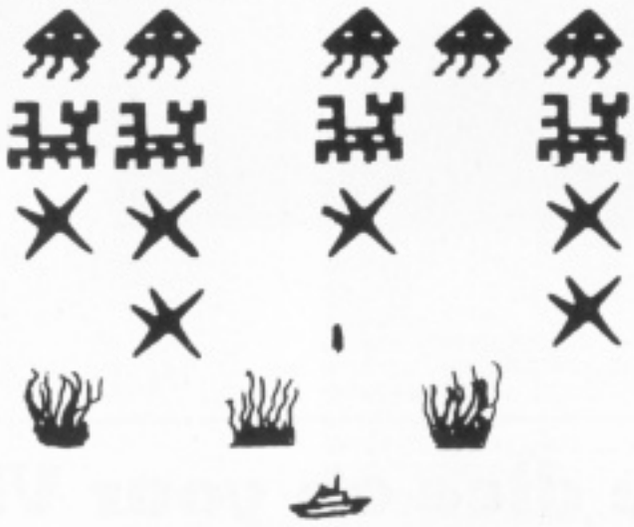

NINE 1K GAMES

1. CANYON
2. ASTEROIDS
3. ASTROBLASTER
4. DEFENDER
5. SQUASH
6. SCRAMBLE
7. SKETCH
8. COSMIC RAIDER
9. FOUR THOUGHT . . .

SEA INVASION

Unexpanded Vic20

Fight off the attacking sea creatures for as long as you can. Shoot the whale for a surprise score, watch out for the crabs, starfish and octopuses.

MULTISOUND SYNTHESIZER

For the unexpanded Vic20

The Vic Multisound Synthesiser is very flexible and can be played in more ways than can ever be explained here, to create music and special effects. For example, create any tune, up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key "9" and enjoy the added effect. Now hit "+", listen to the difference. For a surprise — hit "–". Now add a melody over the top — hit key "8" then "7" — now play a melody, or experiment. *Have fun!*

STRATEGIC COMMAND

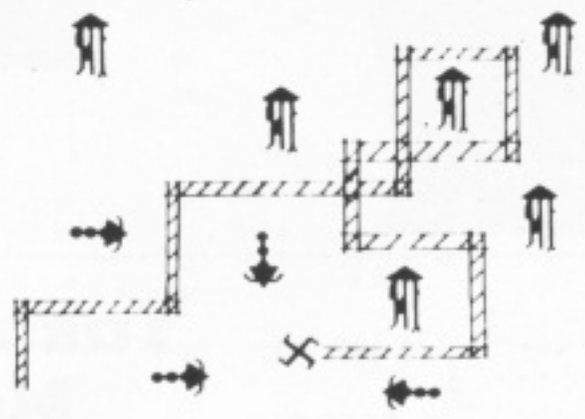

OUR FIRST GAME FOR THE DRAGON

A strategy game for two players. Will keep you active for many hours. Air, sea and land battles!!!

SHARK ATTACK

For unexpanded Vic20

You are in shark-infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you, trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of stopping or covering your tracks for too long, if you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopi (somtimes the sharks will eat part or all of one!)

"A real action shot of the game"

NEW NEW NEW

SPACE ATTACK

For the unexpanded Vic20

SPACE ATTACK is a game of skill. You as the pilot of an intergalactic battleship have to fight your way through wave after wave of various alien spaceships.

SOFTWARE

YHATZI

Toss the dice on your VIC using Mychajlo Dubil's program.

Based on a popular dice game Yhatzi is very easy to learn. The basics of the game lie in achieving certain combinations with 5 dice.

These combinations are:-

A- 2 Pairs: Two Pairs and an odd die in any order eg. 4 5 6 6 4.

B- 1 Prile: 3 dice with the same number and two odd dice in any order g. 34336.

C- 1 4-fold: 4 dice with the same number and one odd die in any order eg 66646.

D- 1 Poker: A Prile and a Pair in any order eg. 33434.

E- 1 5-fold: All dice with the same number eg. 66666.

F- 1 yhatzi: A run in numbers from 1to5 or 2to6 in any order eg. 35642.

This program was written for the VIC-20 with a minimum of 6K of memory. Between 2 and 8 players may play and the game is fun for young and old alike.

Each player has a maximum number of 3 throws. At the end of each throw the player may hold any number dice to achieve a combination, but once held that die will be held for the duration of that turn. When a player has achieved a combination which he wants he types S to score that combination. The computer will then ask which combination the player wishes to score, to which the player replies by typing a letter A-F corresponding to the combination. The computer will then check the die and score accordingly. It is now the turn of the next player. The game ends when a player has scored all the combinations.

HOW IT RUNS

Lines 1-7	Set up graphics for dice (a number enclosed in a box).
Lines 8-17	Ask how many Players and their names and set variables and flags to 0.
Lines 18-24	Main display with title and dice.
Lines 27-34	Sub-routine to display Player G's scoreboard.
Lines 35-40	Hit <T> key routine to throw dice.
Lines 57-67	Choose random numbers between 1 and 6 for dice.
Lines 42-43	Display dice.
Lines 43-56	Input hold numbers and set hold flags.
Lines 68-72	'How would you like to score' routine.
Lines 73-83	Check for 2 Pairs.
Lines 84-94	Check for Prile.
Lines 95-105	Check for 4-fold.
Lines 106-120	Check for a Poker.
Lines 121-125	Check for 5-fold.
Lines 126-142	Check for a yhatzi.
Lines 143-149	Update scoreboard and display new scores.
Lines 150-154	Display winner.

SOFTWARE REVIEWS

This is the place to find out more about the software for your micro. Each month we review a hat-full of tapes and bring you the results.

Each month PCT will be presenting pages of reviews of the computer programs currently available. We have engaged a team of reviewers, each of whom is a seasoned user of his/her particular machine — and has the crazy streak that means they enjoy playing computer games!

All types of software will, however, be reviewed in these pages; but with around 85% of all home-computer software being of the playful variety, you will be seeing more games than anything else!

Our 'Ratings Table' headings are:

Program Quality

Here we're looking to see how well written the program is, and how well it exploits the computer's capabilities. Also, how logical is the structure of the program? Does it require the user to make guesses to use it?

Crashproofing

We all hit the wrong key sometimes, do we not? Go on, admit it. If the program has been well written, all should not be lost. If, for example, the machine is asking you to enter "Yes" or "No", then any other key except Y or N should illicit no response whatsoever. In other words, how tolerant is the program of us humans!

Value For Money

Quite frankly, some software on sale today is vastly overpriced. With the low cost of cassette tapes, why *should* simple games cost up to £12 per tape? We judge this one on an overall basis — how much work have the suppliers put into the program and is the price reasonable?

Presentation On-screen

How good are the graphics used in the program? If the instructions are provided on screen, are they both readable and easy to understand? This section examines the visual aspects of the package — vital for games!

Ease Of Use

If the program is for, say, an 'action' game, then the author's choice of keys is very important. Try playing "Invaders" with the movement keys reversed, and the "Fire" button right next to 'Reset'! There are many, many ways in which life can be made easy for the program user. We want to see them *all* used!

Supplied Instructions

Regardless of whether the instructions come on sheets of paper, or are presented as text on-screen, they should be as clear and as concise as possible.

Ratings are done on a "Five stars is excellent, one is hopeless" basis, with the reviewer then scoring the supplied package as a whole on a percentage scale.

Title: **Timegate**
Type: **Tape**
Supplier: **Quicksilva**
Machine: **Spectrum 48K**
Price: **£6.95**

If there ever was a game to demonstrate the Spectrum's capabilities to the fullest then this is it. From the first laser blast to the last warp through time and space this program reeks quality.

Written in machine code, this program uses every trick in the book to give you a fast moving, graphically stimulating space adventure in 4D!

The game concept places you in control of the last space fighter of the free empire. It is your unenviable task to fight your way back in time to the home planet of the alien oppressors and destroy it, thus freeing the galaxy from their reign of terror. Your journey is not easy, because at every turn you are confronted with hoards of aliens intent on preserving themselves and their ancestors.

Your television screen becomes the screen of your fighter. It not only displays the enemy as they swoop down to annihilate you, but also displays your ship's status along with long range scan and tracking radar. Using these controls you can steer your ship into battle with the enemy even though they are not in visual range.

The status indicators give you information as to the state of repair of your craft. When they start moving into the red it is time to land on a planet to repair and refuel your craft. These landing sequences are very impressive because the Spectrum stores a number of planets in its memory and these are displayed in full high resolution as you come into land. Unfortunately your craft draws on the molten core of the planet to refuel itself, causing the planet to be destroyed on your departure.

Scattered randomly about each time zone are the timegates. On finding one of these you are warped backwards in time, nearer to your destiny with the aliens home planet.

All the action is complemented with continous sound effects, ranging from the reassuring throb of your engines, to the shuddering blasts as an alien's bolt strikes home. To really get the best from these effects you should connect the Spectrum up to the biggest amplifier you can lay your hands on.

You can control your flight through time and space by either a joystick or the keyboard. If you can afford it, I would recommend getting a joystick, as you will find that it is easier to relate the movements on the screen to the movement of the joystick. I found the keyboard controls a little difficult to get on with at first, although Quicksilva do supply a clearly marked keyboard overlay that makes finding the correct key in an emergency a lot simpler.

To complement the program you get some well written sleeve notes and a separate program to train you in the use of the keyboard controls. This program also deals with description and meanings of all the system controls displayed on the screen.

Title: **Rabbit Writer**
Type: **Tape (also available on disc)**
Supplier: **Rabbit Software**
Machine: **Vic 20 plus 16K**
Price: **£19.99**

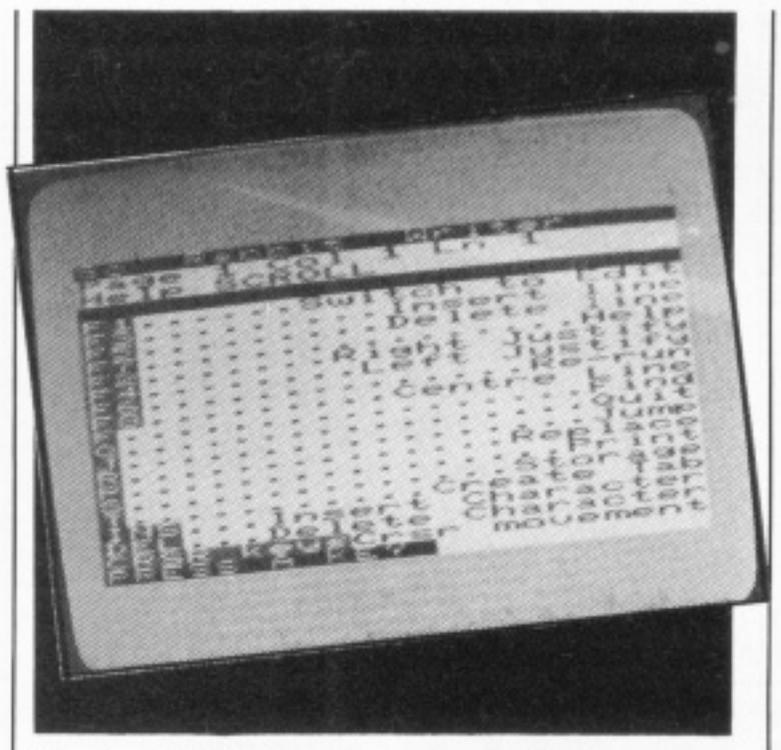

Rabbit Writer is a word processing that will enable you to emulate many of the features available on more expensive programs for your VIC.

Unlike many programs here the cursor stays in one place, while the words you are typing move to the left. This looks odd at first but works well in practice. Although you can only show 22 columns on the screen at any one time, your copy can be up to 80 columns wide. To show the rest of the text, you scroll the copy across the screen. This is a feature used on many more expensive word processing packages.

On setting up Rabbit Writer, you decide on the width of your copy and the page length. At the top of the page is a status line where you are always told the page number, line number and column number.

Rabbit Writer has two basic modes. Edit, where you are changing the copy in some way and Scrolling, which is used to move around the screen to see the rest of the text. All of the function keys on the right hand side of the Vic are used, the top key is used to change modes and the bottom one for the Help facility. This useful feature is available in both the Edit and Scroll modes.

After pressing this bottom key you can soon solve any problem starting with 'What do I do next?'

In fact this feature also eliminates the need for any written instructions, though three pages of written details are supplied.

Although the cursor starts off in the centre of the screen, you can easily move it around by pressing the cursor keys. But when you do, it appears to have the opposite effect. Pressing cursor left makes all the text move to the right, but in fact its the cursor that moves left and the page that moves right.

In the scroll mode you have all the functions needed to manipulate your copy, and to see them you either read the instructions or press the Help key. I just used the Help key as it was easier.

The F1 key changes the mode between Edit and Scroll. F3 gives you the facility to insert a line of copy. While F5 lets you delete it. F7 is the Help key. For justifying F2 gives you right justified and F4 left justified. And for the centre line type F8. If you want to re-run the program F6 gives this facility. For the first occurrence of a set of characters just press F for Find, but don't try to find commas as this doesn't work.

To leave or quit the program just press Q and if you want to replace a set of characters then R gives this option. But the new set must be the same length. So John can be replaced with Mark, but not with Richard. If you want to print out your text and most people do, just press P for print.

When you press this key you will be asked whether you want to merge a letter with a database file created by Rabbit Base. This Mail Merge facility is something that is sometimes extra even with much more expensive programs.

But Rabbit Writer does not have the block move feature of more expensive word processors, neither do you have the facility of word wrap around at the end of each line of copy. These are refinements which you can manage without, considering this package costs under £20 on tape.

Rabbit Writer is a very useful addition to the range of Vic software, especially if you have already bought a copy of Rabbit Base.

Title: **Computer Scrabble**
Type: **Disc**
Supplier: **Little Genius**
Machine: **Apple II**
Price: **£24.95**

Scrabble by computer is comparable to chess by computer — it's useful for solitary players — but how good is it? Can the computer's in-built (and limited) dictionary cope with the challenge of a mind comparable to the Concise Oxford?

It not only coped, but more than admirably, giving this Scrabble fanatic several tough games.

The instructions were easy to follow — seasoned Scrabble players will already know the rules of the game — and the graphics were good with a clear screen layout, although after an hour of play my eyes were beginning to tire from gazing at luminescent characters.

A beginner to the game might find it inconvenient and distracting to have to call up information such as values and distribution of characters (couldn't this have been printed along with the instructions?) but the program did allow you to do almost anything you would normally do in a Scrabble game, including shuffling and changing letters. My biggest complaint was that it allowed you to cheat — it was too easy to overcome the computer's challenge — and I found it a little odd when the computer challenged words such as sorrel — gastronomes need not play! 4 levels of speed and play added to the enjoyment and all in all I found it a compulsive program.

J.C.

GAMES

Title: Robot Nim
Type: Tape
Supplier: A & F Software
Machine: Acorn Atom
Price: £3.95

Nim is believed to have originated in ancient China. In its classic form, you have 4 heaps of counters with 7,5,3 and 1 counters in each heap respectively.

Two players take it in turns and may remove as many counters as they wish, but only from one heap each turn. The one who takes the last counter is the winner. The strategy can be defined mathematically and, once you know it, it's easy to win against an inexperienced player.

In this version, you play the computer and the objects being removed are cute little baby robots! On running the program, you are given the option of defining the number of lines (heaps) and the number of robots per line. Then you are asked whether you wish to go first, and the robots are displayed. The robots seem to be aware of their fate, because periodically they open their mouths and bleat!

After specifying the line number and number of robots to be removed, the robot executioner appears and marches up the screen, pausing to look at your response, before setting off to find his victims — if he has to go back to find them, he grumpily stumps his way down the screen! After finding the right line, he turns and gives a sinister laugh, before blasting the robots off the screen.

The program runs in 5K and uses the Atom's basic graphics. The author is to be congratulated on his imaginative use of graphics and this program is an object lesson in what can be achieved. It is well crashproofed and the instruction sheet is hardly needed, as the program provides all the necessary prompts. The tape also includes an Index routine so that you can set up your tape recorder.

This program presents a simple game in a most imaginative and entertaining way.

B.P.

Title: Chess
Type: Tape
Supplier: Program Power
Machine: BBC Computer A or B
Price: £7.95

In this game of chess for the BBC micro you will find all the standard computer chess features that you would expect to find on any normal game. Some of the more notable inclusions are the ability to castle and to capture pieces by en passant.

All the moves are entered in algebraic notation, although this is not as easy as it could be because the board is not labelled on-screen but instead a labelled board is included in the instructions.

You have six levels of play to choose from. On level one the computer generally takes about five seconds to reply to your move. The computer is also very quick to chastise you for an illegal move. Included in the game is the option to save the game to tape.

Apart from playing a normal game the computer will allow you to set up positions on the board and then play them through to their conclusion. Also included is the option of playing a 'blitz' game against the computer. When you select this option you play the computer with a ten second time limit on each move.

For reasons of speed the game is written entirely in machine code. The display is produced using mode seven graphics and while it isn't stunning, it is perfectly adequate for the game. My one criticism of the game is that it is sometimes difficult to distinguish between the pieces, for instance between the Queen and the Bishop.

The game should provide a good few hours of amusement for both novice and intermediate chess players alike.

A.S.

Title: Buck Dodgers in the 25th Century
Type: Tape
Supplier: The Software House
Machine: Vic 20
Price: £5.95

Buck Dodgers, or his closely named associate, have been assigned to clear the way for the first intergalactic highway, route 42.

His cosmic Dozer has anti-matter shovels which are used to clear the space debris left by previous hitchikers. Buck gets 10 zats for each load of debris he zaps, then he must get more energy from the green zargovian antimatter when he looks low on fuel.

But you can also find space junk in your way. You must avoid this junk, which is clearly marked, otherwise you get a large fine. And when you have done enough work to go through the red star gates, you are paid 100 zats. Be careful, if you attack the space gates by mistake you are fined again.

If you suddenly vanish for no apparent reason, it's probably because you have made contact with some forbidden object. So watch what you are touching, it could be fatal.

As the green zargovians appear at random and your fuel soon runs low, you have a distinct possiblity of completely vanishing up your own warp. For a program that runs on the Basic VIC, Buck Dodgers is an amusing game that represents good value for money.

N.A.

Step into the unknown

fast action, arcade style games, fantasy and sci-fi, plus exciting technology in program aids & hardware/software combinations

ZX81 16K

Krazy Kong £3.95

All machine code version of the popular arcade game. This program has all the features of the original and is every bit as fast.

Ghost Hunt 3.95

Gobble you way through a Maze- Ghosts, power pills etc etc. very fast.

Maze Drag Race 3.95

Drive through a giant maze 9 times the size of the screen picking up points as you go – but watch out for the other cars, rocks oil & ice. A really

Alien 3.95

Set on board the spaceship Nostrodamus, can you choose the right weapon to repel the alien before he kills your crew?

DCoder 5.95

Essentially a disassembler for your machine code but with one important difference – it will relocate the code in whole or part to any other part of memory.

Zonix 12.95

Sound effects for your ZX81 are now available at a price you can afford! Zonix is a hardware/software combination that allows you to write programs with real impact. The software includes two programs:

a) A program set to produce bombs, missiles, fire engines, tunes, telephones and sirens. Also includes the facility to make your own.

b) A program that turns your ZX81 into an electronic organ.

The hardware is an amplifier with volume control and loudspeaker which simply plugs into the mic socket of your ZX81. The sounds can be actuated from within your programs with a simple command. They can also be of various lengths so the limit is only your own imagination.

MCoder £7.95

This truly amazing program is the most flexible compiler available for the ZX81 AND NOW THE SPECTRUM TOO!.

MCoder will instantly translate your slow basic programs into super fast machine code at the touch of a key. It is also extremely easy to use: just load MCoder (the ZX81 version is just 2K long, the spectrum versions 3K) and then write your basic program as normal or you can load a basic program from tape to save you retyping the whole thing. MCoder then allows you to run and debug the basic until it is fault free. Now you can bring MCoder into operation using a print USR command – the basic will then be compiled into machine code as you watch!.

On average MCoder will increase the speed of basic programs 75 times. Both the ZX81 and the spectrum version will handle 95% of all basic commands and is quite simply the best compiler on the market. state 16K or 48K when ordering spectrum MCoder.

DRAGON 32K

Dragbug 9.95

Dragbug is a powerful machine code monitor plus a full disassembler for your Dragon 32. An essential software tool for writing, debugging and running your machine code programs or machine code subroutines to be called from basic.

Star Trek 7.95

An intergalactic adventure in full sound and color. As captain of the SS Enterprise your mission is to defend the empire from the invading Klingons. Features include battle computer, phasors, photon torpedoes, scanners etc etc. Nine levels of Play

Attack 7.95

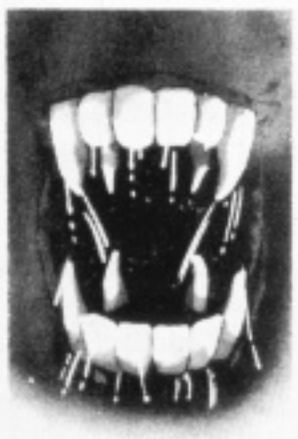

If you've ever played defender or scramble just wait till you play Attack! Incredibly fast !!!

Dataplan 11.95

A superb business or home use filing & reporting system. Flexibility is its strength making it usable in place of any card index application. Features include sort, search, list, delete, change, save, file etc.

Textstar 11.95

Not only can Word Textstar function as a complete word processor but includes comprehensive editor routines that make writing and debugging programs as simple as A.B.C.

QSave £15.95

MANY THOUSANDS OF SATISFIED CUSTOMERS NOW HAVE A HIGHLY RELIABLE LOADING SYSTEM WHICH OPERATES 16 TIMES FASTER THAN THE SINCLAIR SYSTEM'

The news is that QSAVE has been improved for '83

This is what you get:

1. A cassette interface to improve the signal quality (essential if a high speed loader is to be reliable) which will also improve the loading of your programs. The interface plugs into your ZX81 using the leads supplied and has been improved to incorporate: AN AUTOMATIC LEVEL CONTROL....AN OVERLOAD WARNING LIGHT....A SAVE/LOAD SWITCH (no unplugging of mic or earphone leads)....AN ON/OFF SWITCH (which doubles as a Reset switch). With these features loading is highly reliable (programs will still load with a volume setting as LOW as ¼).

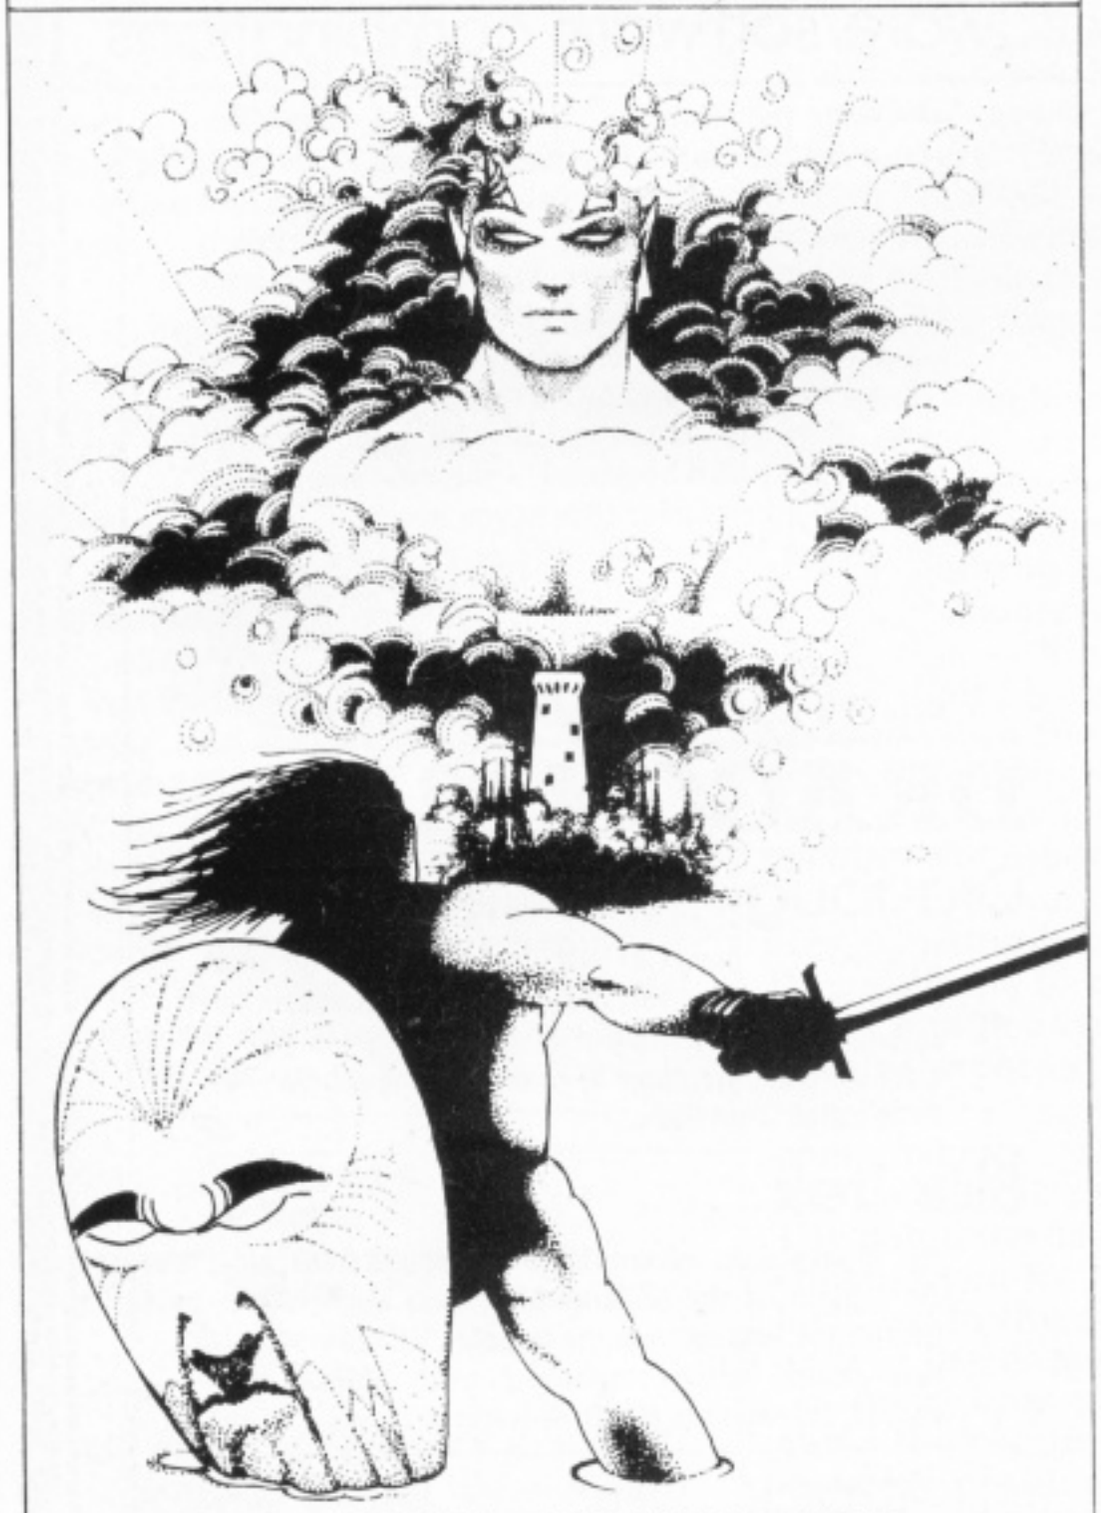

2. Highly sophisticated software which will load and Save programs at 16 times their normal speed (i.e. 8K in 10 secs; 48K in 110 secs). Programs can be named to allow a superfast file search through a tape. It works equally well with autorun programs, Basic or machine code.

A **TRUE** verify feature is also provided – this allows you to verify that a 'SAVE'd program has 'SAVE'd properly **BEFORE** turning off the power and finding all is lost. QSAVE will operate with **ANY** memory, on **ANY** program length **AND** with your existing programs. **All the above is contained in ½K of superbly easy to use Software.**

SPECTRUM 48K : ZX81 16K
SIX PART ADVENTURE

BLACK CRYSTAL
THE QUEST IS ABOUT TO BEGIN

The ultimate role-playing adventure for the SPECTRUM/ZX81.
You can become a warrior, elf or wizard on a quest to find and use the rings of creation: to destroy the Black Crystal and defeat the Lords of Chaos. Held within six programs lies a land of fabulous treasures and mythical monsters. Journey through the land of Beroth, explore the castle of shadows, descend into the Shaggoths lair, search for diamonds in the sea of sand but beware of sand sharks! Confront the fire demon in his temple, battle against the Lords of Chaos and win your way to the Black Crystal.

By splitting Black Crystal into six programs we can provide more variety and detail than any other adventure for the Sinclair computers.

Real time monster battles. Superb graphics. Save game feature. All six parts are supplied together on cassette, boxed with instruction booklet.

SPECTRUM 48K: 180K OF PROGRAM IN SIX PARTS — ONLY £7.50
ZX81 16K: OVER 100K OF PROGRAM IN SEVEN PARTS — ONLY £7.50

ZX81 GAMES
from
J.K. GREYE SOFTWARE LTD
THE NEW GENERATION SOFTWARE HOUSE

"Without question the finest machine code games available today"..... J.N. ROWLAND Product Manager for W.H. SMITH.

GAMESTAPE 1 for 1K _____ **only £3.95**
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GUILLOTINE, KALEIDESCOPE, etc.
PROBABLY THE BEST VALUE 1k TAPE AVAILABLE.

We've done in 1k, games which some of our competitors require 16k to do!

GAMESTAPE 2 for 16K _____ **only £3.95**
***STARFIGHTER** Superb machine code Space Battle. Set against a background of twinkling stars, with stunning explosions — if you can hit the enemy!
PYRAMID Can you move the Pyramid? Make a mistake and it will collapse! A Thinkers game.
ARTIST The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, CLS, etc.

GAMESTAPE 3 for 16K _____ **only £4.95**
***CATACOMBS** A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Phantoms, an Exit (to the next level), and there's an infinite number of levels.
NOTE. . . . This is NOT one of the necessarily limited text Adventures as sold elsewhere.
"An excellent addictive game which will keep you amused for hours.". . . . *COMPUTER & VIDEO GAMES.*

GAMESTAPE 4 for 16K _____ **only £4.95**
***3D MONSTER MAZE** The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective!), you've never seen anything like this before!
"3D MONSTER MAZE is the best game I have seen for the ZX81". . . . COMPUTER & VIDEO GAMES
"If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greye's 3D MONSTER MAZE would be the one without doubt" . . . . ZX COMPUTING. *"Brilliant, brilliant, brilliant!"....POPULAR COMPUTING WEEKLY*

GAMESTAPE 5 for 16K _____ **only £4.95**
***3D DEFENDER** The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewscreen shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen, which shows your rotating home planet, backdrop of Stars, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!
"Another 3D winner"..... *SINCLAIR USER*

GAMESTAPE 6 for 1K _____ **only £1.95**
***BREAKOUT** Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!

MICROSPOT

NON-KEYBOARD CHARACTERS

Populate your Print statements with little men and faces with this clever routine from H.F.F. Lobley.

Many micros contain lots of exciting characters for you to use in your programs. The only problem is that many will not let you put them into PRINT statements like normal characters. This routine shows a quick and clever way of doing just that on your Sharp MZ-80K.

All you have to do is to place a temporary character in the PRINT statement where you want your little man, face or whatever to be, then run the routine and watch as the computer replaces the dummy symbols with the ones of your choice.

Program Listing

```
 9999    STOP
10000    FOR I = 53248 TO 54247
10010    IF PEEK(I) = 65 THEN POKE I,202
10020    NEXT
```

Using the Program

1 Enter the lines 9999-10020.

2 Enter your main program in the usual way but enter a temporary character (in this example I have used a 'spade' whose character code is 65) in place of the desired character, (in this example, 'little man', code 202).

3 After a line containing the temporary character is entered, enter RUN 10000 and the character will be changed wherever it appears on the screen.

4 At this stage, only the display has been changed. To change the line in memory, move the cursor back to the modified line and press RETURN.

5 When they are no longer needed, lines 9999 to 10020 are deleted.

Program Notes

Line 9999 prevents the program from being executed when not required, eg after a trial run of part of your program.

Lines 1000-10020 look at each screen location in turn and substitute your desired character for the temporary one. You will obviously choose characters and codes to suit your particular requirement.

The line numbers used should obviously be well away from those used in your main program.

Conversion to another system should involve little more than using the appropriate screen locations in line 10000, i.e. top left and bottom right corners of your screen.

BOOKS

SPECTRUM BOOKSHOP

Dilwyn Jones sees an array of spectrum books in their true colours.

The recent flood of books relating to the ZX Spectrum computer have turned out to be better quality overall than their ZX81 counterparts. None of the books reviewed were bad, but some were slightly expensive for what they were.

Cover designs are a vast improvement over ZX81 books — most Spectrums books have colour covers with a high sheen finish. Trouble is, almost every book has a photo of a Spectrum and a band of colour similar to the go-faster coloured stripes on the keyboard of the Spectrum. A little bit of variety would not go amiss here — publishers please take note.

THE SPECTRUM BOOK OF GAMES:
by Mike James, S.M. Gee, Kay Ewbank.
Granada
£5.95, (146 pages).

This is a collection of 21 games, mainly graphics games, which, although nothing to shout about, are generally fairly good as books of games programs go. Under 'Perfect Programming' the authors claim "that there is no such thing as the last bug in a program".

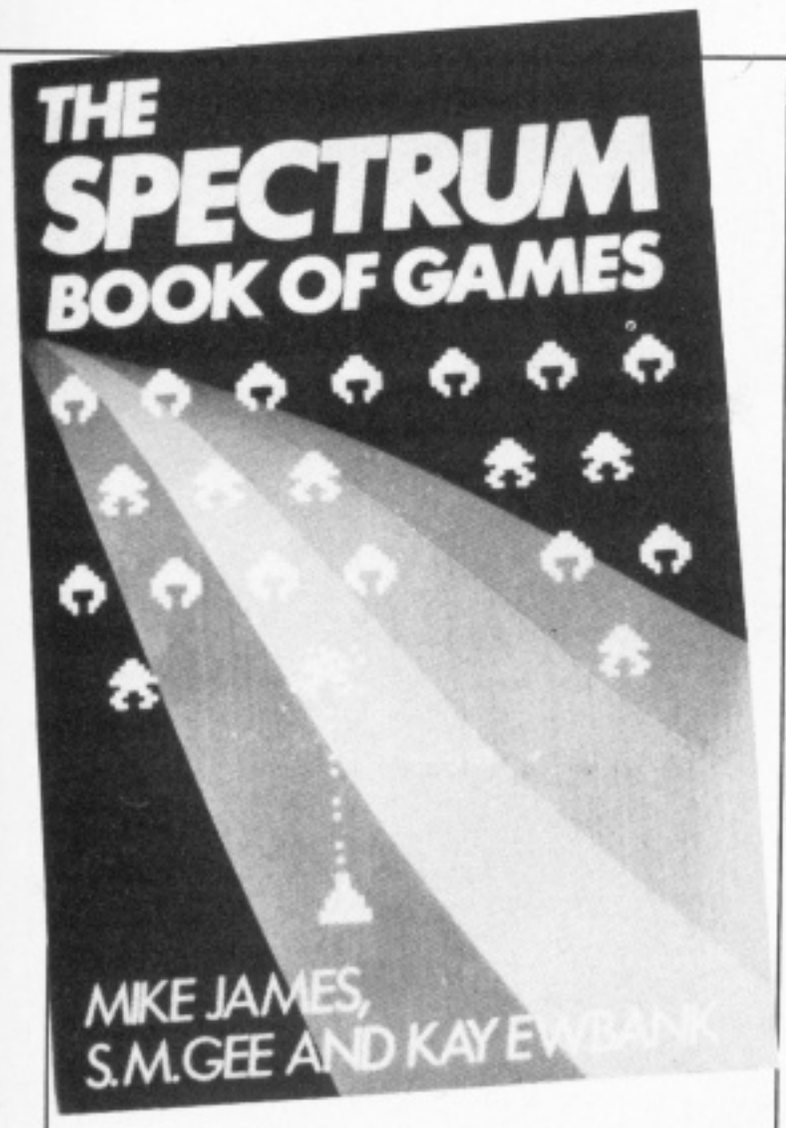

Maybe so, but silly little bugs lie in some of the programs which detract from them even though they do not affect the running of the program. This is the sort of thing I'm talking about, a sentence from one of the programs: "You took one jumps to . . ." That is, not paying attention to singulars and plurals.

The error could have been avoided through something as simple as the inclusion of a short AND clause along the lines of this, within the PRINT statement:

PRINT "You took";jump;"s" AND jump>;"to . . ."

The same sort of attention to detail applied throughout the book could have made a world of difference to the finished product.

The programs themselves are a

mixture of old and new ideas, some rather ordinary and others infuriatingly good and addictive. I spent a lot of time trying to get my dog on the screen to herd some cute fluffy white sheep into a pen only to end up being told I was no good as a shepherd and should hand in my shepherd's crook!

There are fairly good explanations and descriptions of the programs and their structure and also included with each program is a Typing Tips section to help make sure you don't confuse the letter 0 with the digit zero in the dot-matrix printed listings (not ZX printer listings) for example.

These listings are reproduced from a good quality printer and are large, bold, easy to read and tidier than ZX printer listings although this means there is no 'spot the error at a glance' as a result.

GAMES TO PLAY ON YOUR ZX SPECTRUM

Martin Wren-Hilton
Shiva Publishing
£1.95, (43 pages).

A slim book mainly comprising of games to play on your Sinclair Spectrum computer. Despite the title, there are some non-games programs included.

The book claims to be one of Shiva's Micro Puzzle books although there are no puzzles as such, despite some challenging games. The programs are reasonable and a few interesting techniques can be learnt from studying the listings. Some rather poorly reproduced screen photographs accompany the listings and there is only a brief documentation with each program which is at best described as adequate.

A series of 'bugs' type of cartoons are interspersed with the programs and the humour can either add to or detract from the programs depending on taste (would you describe 'Breakout' as a game to drive you up the wall?). The program listings are typeset but I found no major errors in the programs I tried. Good use is made of sound and graphics and the book is, despite its small size, worth the £1.95 cover price. Beginners may find the book of more interest than the more experienced user.

TWENTY BEST PROGRAMS

by Andrew Hewson
Hewson Consultants
£5.95, (118 pages).

This book contains a collection of twenty programs which for the most-part are non-games orientated. They are well documented and the instructions and explanations are generally as clear as the complexity of the methods used allow.

Some of the ZX printer listings are rather faintly reproduced, although this may cause problems with variable names. For instance, it won't prevent you using any of the programs and only applies to a minority of the listings.

The programs are on the whole good, ranging from a 'Learning Hangman' game which has either you or the computer attempting to guess the word (the Spectrum's vocabulary can be increased with experience and even saved on tape!), through a program to give you a screen and paper printout of a calendar for a month or year you specify, to a full disassembler program which fills the 16K Spectrum to the byte. The programs are mainly in BASIC although some use is made of machine code in the book.

The book doesn't have many faults, but it didn't click with me entirely. Nevertheless there is something for everybody here especially as the programs illustrate a number of advanced techniques and routines both generally applicable to other computers and specifically to the Spectrum. From studying the programs you can learn a lot even if the programs do not appeal to you as such.

This book is very clear, instructive and helpful. It is more free of technical jargon than the customary manuals on machine code for a particular microprocessor. For those with a Spectrum and a yearning to learn to program in machine code, this book should most certainly be considered.

A few major programs are given such as the Freeway Frog and the EZ machine code monitor which has a lot of useful facilities for the machine code programmer even though it is not an assembler. The book is well laid out as a whole and could even serve as a reference guide for the more experienced programmer who needs some occasional help with a particular subject.

THE ZX-SPECTRUM AND HOW TO GET THE MOST FROM IT

by Ian Sinclair
Granada
£5.95, (130 pages)

With a title like that one may be forgiven for thinking that this was a book of fairly advanced material about the Spectrum. But no so.

In fact it is mainly a beginner's book in the old 'teach yourself Spectrum programming' mould, with a few useful routines, advice and hints thrown in. There are so many books of this kind around that it takes a very good book to stand out from the crowd. Also, this book covers much similar ground to another book from Granada, The Spectrum Programmer by S.M. Gee.

As such, this book is nothing special, although it is comparable with most other books of its kind. I sometimes think it would be a very good idea to compile the best from these books, selected by beginners, into one book that is good throughout.

The book starts very well with a very comprehensive guide to setting up the television and the computer in those first few tentative moments afte the Spectrum is taken out of its packaging. Such subjects as tuning in the TV set, choosing the optimum brightness, colour and contrast settings — all obvious to experienced users but a great help to the newcomer and perhaps indicative of Mr. (no relation) Sinclair's background in electronics.

This is followed with a useful section on cassette recordings and the probelms that can be encountered, but why, oh why, was the possibility of broken cassette leads (as happened to me) not clearly mentioned in the checklist of errors?

From here on the book is rather disappointing and there are a few silly mistakes.

HOME ACCOUNTS

An accounts program specifically designed for the home user. It contains many features which makes it the best accounts package currently available for the BBC Microcomputer. Home Accounts is a comprehensive program allowing statistical analysis of data with mean and standard deviation, as well as a three month forward forecast. Full documentation is supplied. Available for use on the Model B only. **Price £12.50**

FRENZY

A fast moving and challenging game for the Model A or B Micro. You are in control of a land speeder with no brakes which continues to increase in speed. You must dodge anti-matter blocks whilst destroying as many aliens as possible. **Price £5.75**

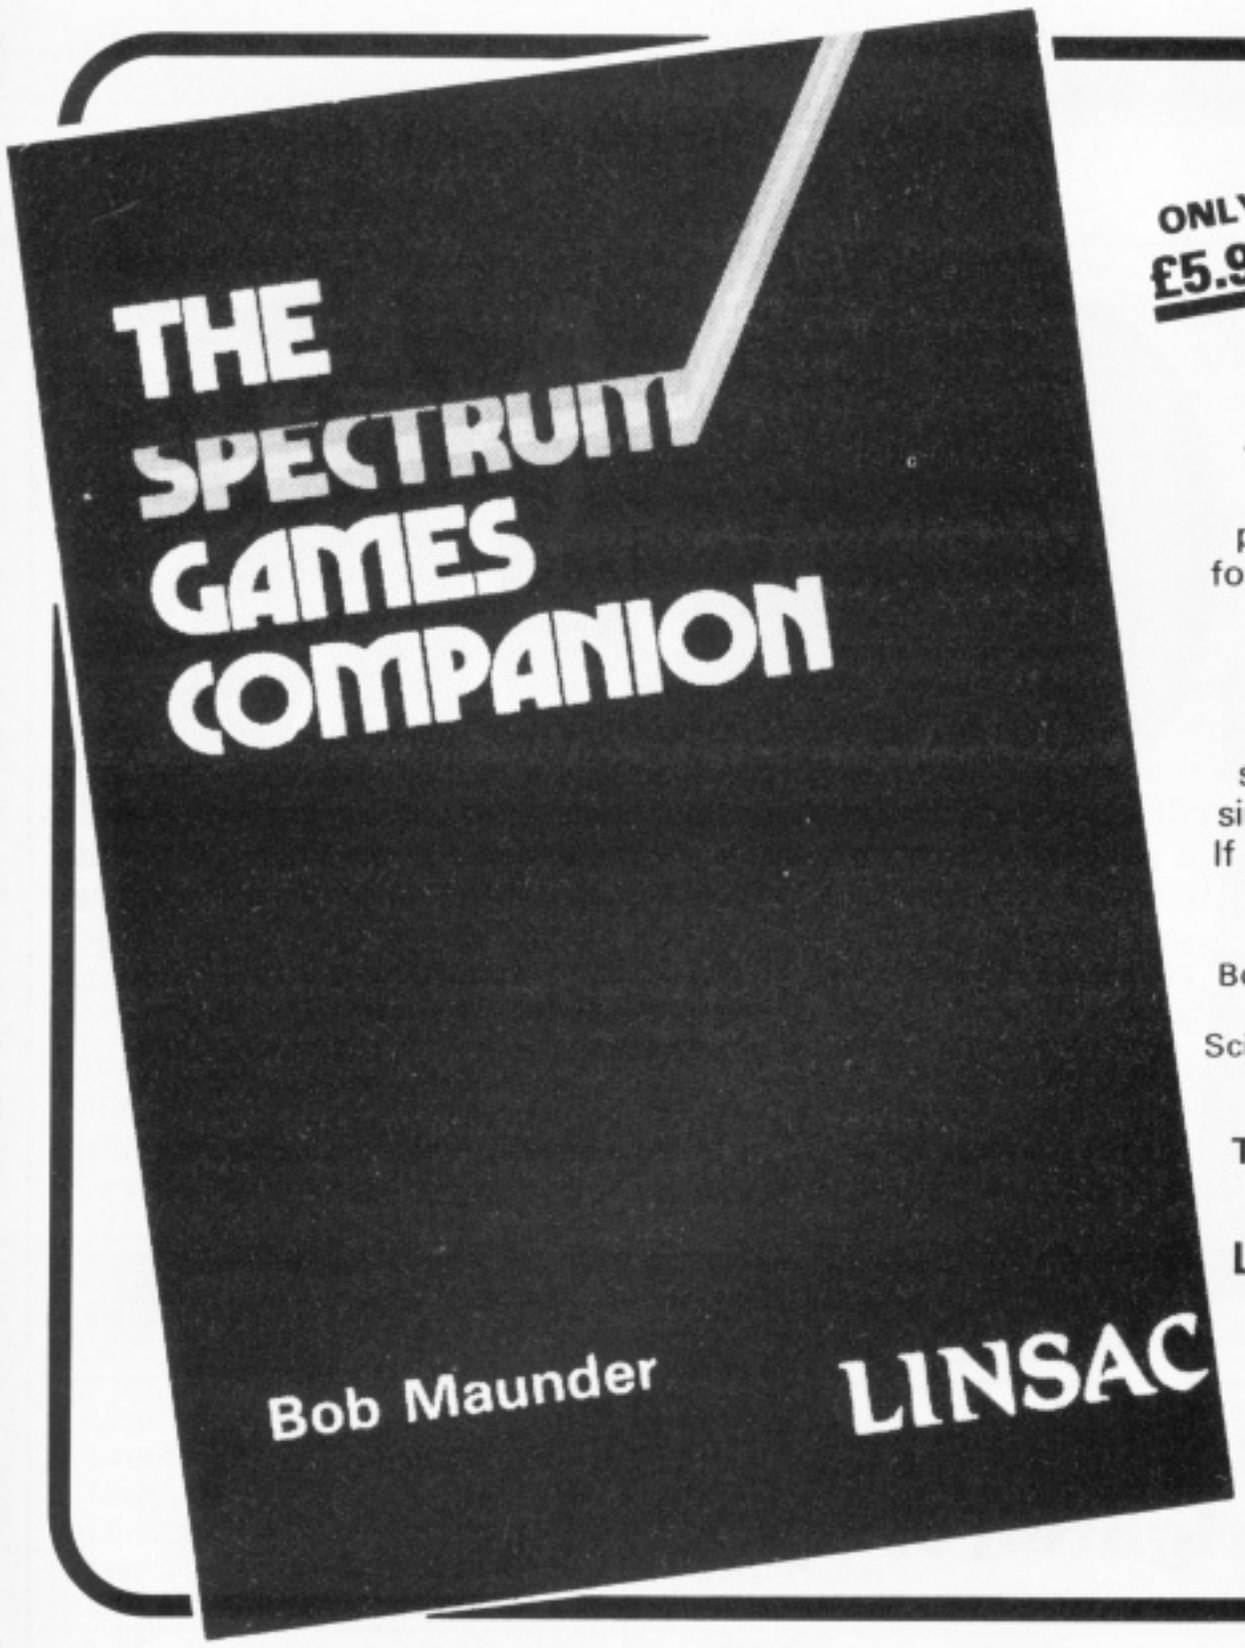

POTENTIOMETER JOYSTICKS

Single or twin joystick units for direct connection to the Model B. Allows true analogue movement via one or two high quality dual axis potentiometer driven joysticks. The unit is enclosed in an elegant injection moulded case with push button(s) for use with the Adval (O) Statement. It comes complete with full instructions and demonstration programs.

One Stick Unit £27.50 **Two Stick Units £36.20**

Linsac's ZX Companion series has received excellent press reviews:

ONLY £5.95

"Far and away the best" — *Your Computer*

Thoughtfully written, detailed and illustrated with meaningful programs ... outstandingly useful" — *EZUG*

'The Spectrum Games Companion' is the latest addition to the series and is aimed at the games player and programmer alike. Twenty-one games designed specifically for the ZX Spectrum are included, with clear instructions on entry and play. Each program is explained fully with complete details on how it is designed and written. Introductory chapters show how to set up and use the Spectrum and how to create your own games. Later sections cover number games, word games, board games, simulation games, dice games, card games and grid games. If you want to enjoy your ZX Spectrum and learn its secrets at the same time then this is the book for you!

Bob Maunder is co-author of 'The ZX80 Companion' and author of 'The ZX81 Companion'. He is a Senior Lecturer in Computer Science at Teesside Polytechnic, holds an MSc degree in Computer Science, and is a Member of the British Computer Society.

The Spectrum Games Companion is available from good book shops, or send £5.95 to:

COLOUR MIX

If your Spectrum is dull and boring then Carolyn Arthur can help you brighten it up.

If you find yourself restricted by the colours your Spectrum can offer you then Colour-Mix will open up a whole new realm of colourful characters for you to decorate your screen with. So now is the time to

unleash those Pink Space Invaders and those Orange Pac-Men.

Colour-Mix uses the Spectrum's user-definable graphics facility to mix up two colours thoroughly enough for them to look like a new colour. In this way oranges, browns and the purples can be formed, which are not normally possible. The only limitation is that you cannot print characters on these colours unless you re-define them on your background as user-graphics. The information for the graphics is held in the data statements at the start. They are in decimal, not binary, form as it is shorter to type in.

When typing in the program I suggest that you type up to line 70 and "RUN" that part first, to get the user graphics. This makes it easier to type line 160 for which the PRINT statements are:-
6 spaces, 5 graphic mode A's, 5 graphic B's, 5 graphic C's, 5 graphic 8's and the second PRINT statement:
6 graphic 8's

Running The Program

When run, the program tells you to press a key and then proceeds by displaying 6 strips of colour filling the screen. They range from a pure colour in the left, to another in its "BRIGHT" form on the right, through three different mixtures of the two. Pressing a key will change the right hand colour. This goes on through all the possible combinations (there are 28). If you press "c" at any time except when being asked "Scroll?" a chart showing some of the new colours will be displayed. There are 6 rectangles horizontally going through the shades of a colour and 5 rows of different colours to illustrate some of the possibilities for subtle shading in pictures.

Finally, if you press "N" after displaying the chart, the numbers in the data statements from which the colours are formed will be printed on the screen in the corresponding chart positions. This is so that you can easily reproduce the colours that you want. The numbers can be interpreted as follows:—

"1" above the numbers for a colour represents the BRIGHT form.
143 is the code (on page 186 of the Manual) for a square of ink colour.
144,145, 146 are the codes for the user-graphics on the A,B and C keys respectively.

The next two numbers are the paper and ink colours.

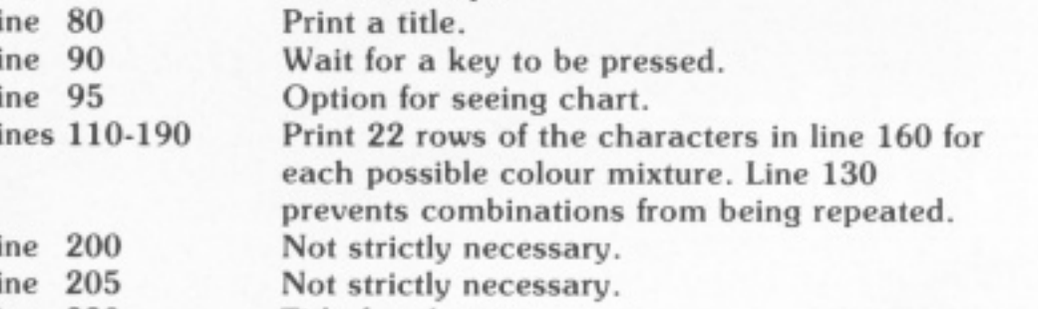

HOW IT RUNS

Line 5	Data for user-graphics on A key.
Line 10	Data for user-graphics on B key.
Line 15	Data for user-graphics on C key.
Line 20	Count for defining 3 characters.
Line 30	Count for 8 rows in each character.
Line 40	Choose the user character to be used.
Line 50	Read a row of the character.
Line 60	Poke it to the memory location.
Line 65	End of n loop.
Line 70	End of x loop.
Line 80	Print a title.
Line 90	Wait for a key to be pressed.
Line 95	Option for seeing chart.
Lines 110-190	Print 22 rows of the characters in line 160 for each possible colour mixture. Line 130 prevents combinations from being repeated.
Line 200	Not strictly necessary.
Line 205	Not strictly necessary.
Line 220	Title for chart.
Lines 230-238	Data for colours in chart.
Line 250	Start of loop for vertical position.
Line 260	Start of loop for horizontal position.
Lines 270-287	Read a. If a = 1 then print "1" in red if using number chart, or set BRIGHT state if using colour chart. In either case go back and read another value of a.
Line 290	Read data for paper and ink colour.
Line 300	Start of loop for height of individual block of colour.
Line 310	Start loop for width of individual block of colour.
Line 315	Check if number chart is wanted.
Line 320	Print appropriate character in chosen colours.
Line 325	Print numbers in number chart.
Line 340	End of width loop.
Line 350	End of height loop.
Line 360	Go on to next colour.
Line 365	Go onto next row.
Line 370	Stop if number chart has been printed.
Line 375	Finish off colour chart.
Line 380	Wait for a key to pressed.
Line 385	Option for number chart. Restore data for chart.
Line 395	Go back to start of chart drawing routine.

HINTS ON CONVERSION

It is arguable whether this program would be suitable for conversion for other Computers since most which allow user-graphics have a greater range of colours than the Spectrum. It could possibly be used where the number of on-screen colours in BASIC is limited.

The user graphics are designed on an 8 x 8 grid and have the following shapes:-

The command "BRIGHT 1" makes whatever is printed appear slightly brighter. An apostrophe between two items which are to be printed, as in line 80, merely causes the second item to begin a new line.

Most of the other Spectrum commands are either typical BASIC or are self-explanatory (such as PAPER, INK and BORDER).

Variables

x	Count for selecting letter for user-graphic. Also acts as a check for whether to draw the number chart (is x = 1) or the colour chart (if X < > 1).
n	Count for reading 8 rows of user-graphic.
p$	Stores letter of user-graphic.
a	Data for a row of the user character.
b	Count for left hand colour of stripes.
c	Count for right hand colour of stripes.
i	Count for number of lines.
l	Count for vertical height of first row in block of colour.
t	Count for horizontal position of start of block.
a	Data for whether or not Bright 1 state required, and also the code of the character to be used.
p	Data for paper colour.
i	Data for ink colour.
c	Count for number of rows in block of colour.
w	Count for width of block.

DRAGON SOFT

St George and the Dragon for the Dragon 32 **Only £6.95**
Can you slay the fire breathing Dragon? Can you cross the slippery bridge and smite the magic stone to lift the curse from the castle and its beaufitul maidens? Don't get roasted by the Dragon, and mind the river and pond. If you fall in, your armour will send you to a watery martyrdom. Two versions for joystick and keys are contained on the tape. Using sound, the program also pushes the Dragon high resolution to its full capabilities.

UFO for the Dragon 32 + Joystick **Only £6.95**
In the depths of space you face a UFO mothership in head to head combat. Dodge the approaching Photon torpedoes or shoot them for points as the UFO fights back. Evenly matched, this is no walk over for the defender of earth. When the UFO is in range, so are you! Hi-res is used to its limit and you can even see the UFO's port open as it releases its deadly weapon. It can even duck below the nose of your craft to reappear again and attack.

Handicap Golf for the Dragon 32 **Only £6.95 inc p&p**
An 18 hole, 1 or 2 player handicap game. There are bunkers, the rough, lakes, trees, gorse bushes and gusting wind which all have to be taken into account as you choose the strength and direction of your shot. The computer decides the length of the hole and its par, making sure you never, ever play the same hole twice. Watch the Dragon 32 build up the hole in a fascinating graphics routine. Full use of sound and colour.

ORIC 1

Revealed here the computer inspired by the popular space-fiction series Blake's Seven.

On reading the specification for the Oric I computer and looking at the way it has been styled it is fair to say that it has been designed to be a direct competitor to the ZX Spectrum. Certainly, comparing the machines specification for specification it seems that the Spectrum wouldn't stand a chance. When the Oric is plugged in it's a different matter.

Unfortunately, for this review we had to use a pre-production Oric for the basis of this review so some aspect of the machine's operation may seem a little less well covered than others, but hopefully you will be able to get a good idea of how the machine works despite this.

The Oric measures 28cm x 18cm x 4.5cm and the case is made of a heavy duty plastic. One nice feature which the designers have built into the Oric case is a small tilted plinth, so that when you place the Oric on a hard surface, the keyboard is tilted towards you.

Quality Keyboard

The keyboard is better than the Spectrum's rubber monstrosity but is still a fair way off a proper typewriter keyboard. Each key is made out of a small plastic moulding which is mounted on some form of click switch. This arrangement gives the keyboard a very positive feel which is reinforced by an audible bleep when a key is depressed. These bleeps vary in accordance to which group of keys is being used. The letter keys give one tone and keys such as the ESC and RETURN give another. All this makes the Oric's keyboard very positive, but quite slow.

The Oric has been provided with a good selection of sockets for connecting it to the outside world. From left to right they are: RF output for the televsion, RGB output for a colour monitor, 7 pin DIN plug for cassette operations and sound output to an external amplifier, Centronics printer interface, expansion socket for extra memory, joysticks, cartridges, modem, and finally, the power input.

Mounted inside the case are a reset button, a fine tune for the modulator and the loudspeaker. The Oric would be an ideal machine for anybody who wants to generate heavy-metal computer music, for instead of incorporating an electronic party squeaker like the Spectrum, the Oric has a full blown loudspeaker and take it from me, it can certainly blast out the watts.

The reset button, when pushed with a pencil or other suitable object, forces the Oric to do a warm restart, without losing any program that is in memory. This is particularly useful because I found that my Oric had several nasty bugs that had me reaching for the reset button with alarming regularity. More of this later though.

The BASIC contained in the Oric is fairly standard Microsoft. All

its commands are listed in Figure 1. Unfortunately the editing software had not been included in my machine, but from what I gather the machine has a standard screen editor. You call the line you want to edit by using the command EDIT and then use the cursor, escape and delete keys to change the line. The closest BASIC to the Oric's BASIC seems to be the Spectrum BASIC, especially when you start to look at the way the graphics work.

Crazy Characters

The error messages produced by the Oric are all in plain English, which makes a nice change from having to check up in the manual what error 23 stands for. By using the CTRL key you have access to some of the Oric's control characters. These are the 'caps' lock, 'delete line' and a switch to turn the keyboard click on or off.

I found some other slightly more alarming control characters by using the CTRL and ESC keys. For instance, if you hold the ESC key down and press the Y key then release the ESC key, the whole screen goes into an uncontrollable flurry of flashing and scrolling.

It was only through further investigating the actions of some of the Oric's characters that I found that this alarming display could be turned off by printing CHR$(154). The Oric lets you turn off both the keyboard and the display which often happened by accident while I was programming. Whether this was just a feature of the early model I have I do not know because the people at Oric products were unavailable for comment at the time of writing this review.

Perhaps one of the Oric's most impressive features is its sound capacity. As well as providing commands to make your own sounds, it also has four pre-programmed sounds that you call by name from within your program. These are ZAP, PING, SHOOT and EXPLODE. The actual sounds they make are quite accurate to their names. This takes a little bit of the frustration out of getting good sounds to accompany your games.

Sounding Out

If you are not satisfied with these sound effects the Oric gives you three commands with which to make your own noises and music. These are SOUND, MUSIC and PLAY. The SOUND command allows you to select the channel, period and the volume for either a tone or a noise.

MUSIC allows you to select the channel, octave, note and the volume for any musical tone. PLAY is perhaps the most useful of the sound generation commands, as it lets you select one of seven preset envelopes to modify your sound.

By using these commands and adjusting the speed at which the envelope acts it is possible to create some very impressive and professional sounding zaps and explosions of your own.

The Oric has stepped outside convention in the choice of recording speed for its cassette interface. Whereas most machines operate at between 300 and 700 baud for their cassette transfers, with a few going up as high as 1200 baud, the Oric has a data transfer rate of 2400 baud. This is great for loading long programs quickly but in the tests I carried out using the cassette I found that not only was volume critical but also the programs had a tendency to corrupt when they loaded into the computer. All is not lost though because the Oric also offers an option of loading and saving programs at 300 baud.

Hi-Res Haywire

When I came to examine the high resolution capabilities of the machine I must admit that I was both perplexed and disappointed. Firstly the Oric has only eight colours for use on its screen, and not sixteen as some early advertising stated. These colours are black, red, green, yellow, blue, magenta, cyan and white. They are accessed using the commands INK and PAPER, as on the Spectrum.

The problem with this is that as soon as you change the INK colour then everything on the screen changes to assume the new INK colour. This is a serious failing on behalf of the Oric's designers. This happens in both the text and the high resolution modes. In the text mode you can get round it by using a Prestel style display because the Oric contains the control codes to manipulate colours as well as double height and flashing characters.

The text screen has a resolution of 28 rows by 40 characters and the high resolution screen has a resolution of 240 pixels by 200, with a three line deep window at the bottom which is reserved for text. My other critiscm of the high resolution on the Oric is the fact that it uses relative positions in its DRAW command. This is great for moving a shape into different positions on the screen but makes virtually all other high resolution work on the screen unnecessarily difficult.

The command set for high resolution graphics is fairly comprehensive. It includes CIRCLE and FILL commands, as well as a PATTERN command for drawing dotted lines in any style you want. I also find that on my model if you pressed certain keys on the keyboard while it was drawing, the screen literally went haywire.

This could make games playing with the high resolution screen a very hazardous business, especially as the only way to recover from some of these graphic excursions was to use the warm reset button on the bottom of the case.

Bear in mind that the Oric computer I tested was a pre-production model and some of the faults encountered could be due to this.

One of the other interesting quirks of the machine I found was that it seemed to use the screen memory to store some of its variables. Because as I ran programs that involved storing a large number of items in a string array, the screen started to fill up from the bottom with the information that I was storing in the array. This meant that clearing the screen also wiped the contents of my array. Very worrying.

Overall, my impression of the Oric was that it has nothing special to offer although it functions reasonably well as a computer of this kind should. For the money it is quite adequate.

MICROSPOT

INVERSE VIDEO

When it comes to using inverse video the Atom can be miserly. But fear not because N. Tonks has come up with a solution.

If you have an Atom, you will have no doubt realised by now that you are restricted in the use of inverse video in your programs.

The Atom will only let you print the characters A to Z, along with a few others such as square brackets, in this reverse state. This short routine will allow you to considerably expand this capability and will let you print things such as numbers, punctuation marks and the contents of variables, in reverse field.

This piece of code replaces the Atom's own write character routine with one which, every time it is called, checks the state of a flag held in position 90 hex in memory to determine in which state the character is to be printed. If this flag is set to one then the character will be printed in its normal form, if it is set to zero then the character will be printed in inverse video.

To set this flag and thus determine the state of your printing, two normally unused character codes are used. These codes are 16 and 18. The command PRINT $16 causes the flag to be set and acts as an 'inverse video off' instruction.

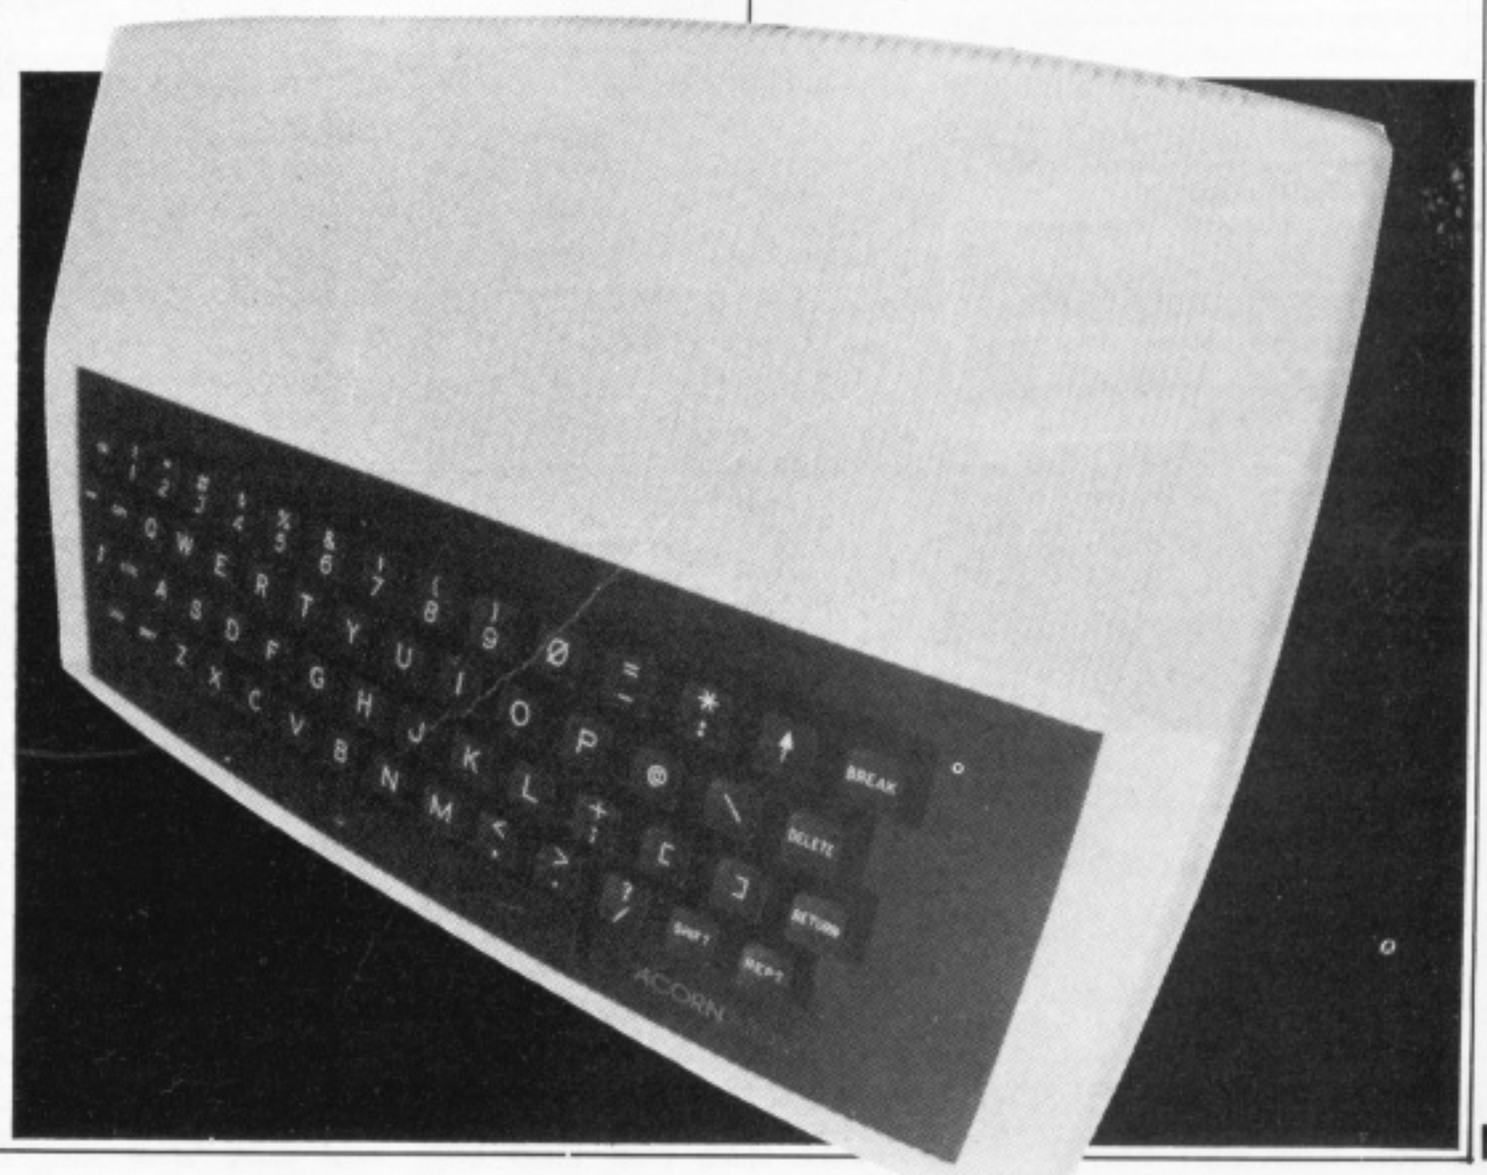

PRINT $18 sets the flag to zero and thus acts as an 'inverse video in' instruction. In the following line of code these two characters change the state of the printing to produce "THIS IS INVERTED" in inverse video, followed by "AND THIS IS NOT" displayed normally.

```
PRINT$18,"THIS IS
INVERTED",$16"AND THIS IS
NOT" '
```

As soon as this flag is set to zero all the subsequent screen printing is displayed in inverse video form, including the contents of variables. This will continue until the flag is reset to one.

Once the program has been entered and run then it can be deleted, as the machine code it produces is free standing. If at any time you press the BREAK key then the code can be activated by typing LINK 10430. The routine occupies an area in RAM between 28BE hex and 28FF hex. This area is protected from corruption provided that the floating point arrays %YY and %ZZ are not used.

Star Raiders

European Countries

Missile Command

Basketball

Computers for people. Atari Home Computers are designed for use in the home by all the family. After all, you don't have to be a computer wizard to appreciate what breakthrough technology can mean, do you?

Atari does more. All home computers contain a microprocessor...the "chip" that's so often in the news. But Atari Home Computers also have a special kind of chip, one that's custom-designed by experts to provide extraordinary capabilities. Which means that an Atari computer can do more for you.

The Graphic Difference. In an Atari computer, a separate microprocessor operates what experts consider the finest colour display in the industry...without diminishing your Atari computer's capacity for work – or play.

So, whether you're using the Atari Home Computer program that monitors your investment portfolio or the Video Easel program that teaches design and perspective, the information shown on the screen isn't just more colourful, it's more complete.

Hear the difference. There's a separate chip that produces sound, too. It controls four built-in synthetic sound generators that can play simultaneously, producing everything from pure musical tones to explosion sounds.

All work and no play? With separate systems for sound and colour, do we even have to say how much fun games like Space Invaders, Star Raiders and Missile Command are? These you'll have to see – and hear – to believe.

Learn everything from how to converse in French, German, Spanish and Italian to chess and touch typing. All at your own pace from a teacher that never gets tired or impatient. Learning has never been more effective or more fun.

A beginning, not an end. The Atari computer is built with one goal...the expansion of your world. And your family's world. It can speak several programming languages, an important extra. And it is expandable...

To learn more about the amazing capabilities of Atari Home Computers either visit your local dealer or fill in the coupon below.

THE GRAPHIC DIFFERENCE BETWEEN ATARI COMPUTERS AND ALL THE OTHERS.

SAVE £4.25 by receiving a FREE magazine binder when you subscribe to Personal Computing Today

Its true, by subscribing to Personal Computing Today you will not only receive your personal copy direct to your door for a whole year but also have a superb A.S.P. magazine binder in which to keep your copies AND ITS FREE!

All you have to do to receive your FREE binder is book a new subscription or renew an existing subscription to Personal Computing Today before 30th April 1983. What could be simpler? Normally priced at £4.25, these attractive binders will hold approximately 12 issues of Personal Computing Today.

Not for you any longer the chore of having to track down dogeared copies of your favourite magazine, instead you will merely go to your bookshelf and they will be waiting for you in pristine condition.

Don't miss out on this outstanding offer — subscribe today and receive your FREE binder within 14 days of your order being received.

SPECIAL OFFER

Cut out and SEND TO :

Software News

INNOVATIVE
TRS 80·GENIE SOFTWARE

from the professionals

TRIAL PACKAGE

The Snapp utilities Extended Basic, Built In Functions, Mapping Support, Autofile and the Garbage Collector are all described in our catalogue. Literature is also available from us on request. These programs are available for the machines listed below.

All of this software is installed into the Disk Basic interpreter of the host machine and thereafter is fully integrated into TRSDOS Basic. Once installed it is entirely transparent to the user.

Extended Basic has six separate utilities within it, including cross reference; variable dump (including values), compression, string and keyword find.

Built In Functions contains a large number of new commands and utilities to aid the programmer, the exact number depending on the machine. For instance, one can POKE up to 255 bytes at one time, sort a number of arrays, erase any or all arrays from the Array Table, PEEK multiple bytes at one time, calculate passwords, exchange the contents of variables and so on.

The Garbage Collector gets over that big failing of Microsoft Basic whereby the machine appears to hang from time to time whilst it sorts out its string area.

Automap is a product designed to automate for the Basic programmer the tasks of presenting information on the VDU and accepting information from the keyboard operator.

Autofile carries out very similar tasks to Automap, but instead of interfacing between the keyboard and the VDU, it interfaces between the keyboard and a file.

These utilities are hard to describe but once you use them, then like us, you will never let them go. They are almost miraculous in their use and are the greatest programming time savers that we have ever seen. They are, however, expensive. This Trial Package has, therefore, been produced to provide a "sample" of these utilities for a very low price. The catch is that this sample can only be installed on one of your disks containing Disk Basic and can only be accessed on that disk 99 times. This is more than sufficient to give the user an idea of the very real and very important advantages of using these utilities.

Model I & III (LDOS)	**£ 7.00**	Model II (TRSDOS 2.0)	**£25.00**
Model III (TRSDOS)	**£17.50**	Model II (TRSDOS 4.1)	**£37.50**

All the above plus V.A.T. ..... p & p 75p

other machines

We have started to supply some of our more popular programs in non TRS-80 format for other machines as follows:

BBC (MODEL B)

JUMBO

The 747 simulation that has swept the TRS-80 community worldwide! So memory tight that there was no room for full colour.

Cassette **£17.25**

MYSTERIOUS ADVENTURES

The English written, machine language series of adventures. Seven in number, at the moment the following are presently available on the BBC:

The Golden Baton
The Time Machine
Arrow of Death Part I
Arrow of Death Part II
Escape from Pulsar 7
Circus
Feasibility Experiment

Cassette (each) **£10.06**

FAIRYTALE

Basic adventure mainly aimed at the kids but for all the family! Uses a scenario of nursery rhymes and fairy-tales within which to find the treasures.

WONDERLAND

A follow-up Basic adventure to Fairytale. Fairytales and nursery rhymes again plus cartoon characters.

Cassette (each) **£10.06**

V.A.T. included

P. & P. 75p for any quantity

TECHNIQUE

TRS 80 TIPSTER

In the second of our occasional series of TRS-80 hints and tips Keith Campbell takes you through the steps of transferring cassette stored programs to disc storage.

Buying disc drives for your TRS-80 is a natural progression that keen owners will make, but the trouble is what can you do with your existing cassette stored software without it going to waste?

The answer is simple. Just transfer it on to your discs, thereby you will save time and sometimes the frustration of CLOADing. First of all though, be sure and make your backup copy of TRSDOS.

A BASIC program will present no difficulty in copying to disc, but will not be compatible with disc BASIC if it calls a machine-code subroutine. Before saving a BASIC program to disc, find out if there is a USR call to a machine-code subroutine by loading the program and typing CM"X",USR. The computer will reply with either a blank line, indicating that USR has not been found, or will list the line number(s) in which USR occurs.

In the first case there is no problem, simply SAVE the program to disc. If USR is found, note the line numbers where it occurs, then type CMD"X",POKE. Again, note the line numbers. List each of these lines on the screen, and look for POKE 16526 and POKE 16527.

These tell BASIC in 2-byte form, from which address to start executing the USR call. In disc BASIC, this address must be specified as a single decimal number (or Hex number using the prefix &H) equated to DEFUSR. The following example demonstrates the conversion required:

```
1000 POKE 16526,48 : POKE 16527,117
```

This specifies an address of 48 + (117 x 256), ie 30000.
The conversion to Disc BASIC is:

```
DEFUSR0 = 30000
```

For addresses above 32767 use a value of (address — 65536).

Now look for the associated USR call following the POKE statements.

```
1010 X = USR(0) : REM JUMP TO M/C SUBROUTINE
```

The conversion for this is:

```
1010 X = USR0(0)
```

Note that the 0 directly following USR relates to the 0 following DEFUSR. Up to 10 calls (0 through 9) may be defined in this way.

Having made changes for all the USR calls and associated POKEs,

the program should run from Disc BASIC so SAVE it to disc.

The above assumes that there will be room for the BASIC program to Load and Run in the existing 'memory size' needed to break the machine code.

This means that a program originally written for a 16K machine should not exceed about 11K bytes. If it does, then you will have to consider relocating the machine code at a higher address, and modifying the DEFUSR address and 'memory size' to correspond.

Running a cassette-based machine-code program from Disc presents an altogether different problem, since machine-code will load in memory exactly where it is told. This may, and probably does, start at an address like 4300H (17152 decimal). The trouble is that the Disc Operating System DOS resides in this area, up to 5200H, and therefore, in loading your program, you will overwrite the operating system. TRSDOS won't like this, and will reboot, causing the machine code to abort.

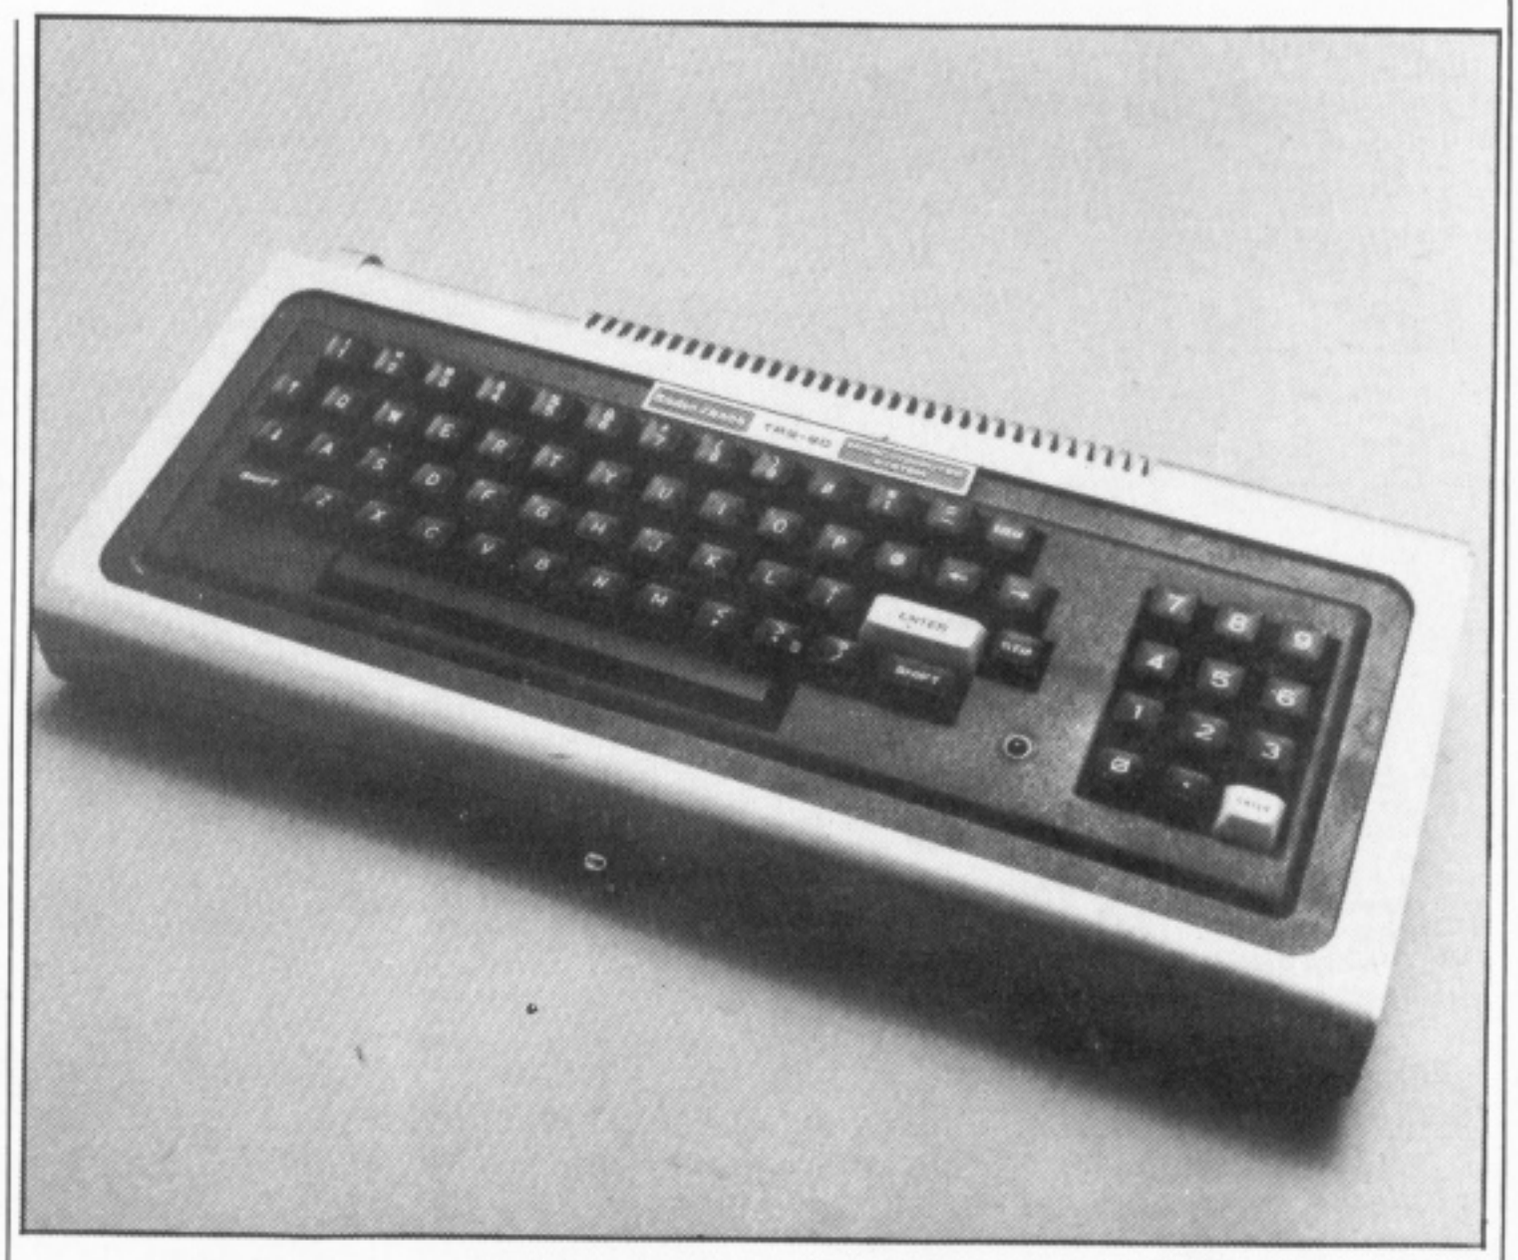

Problem Solving

The way to overcome this is to load the machine-code higher up in memory than it should go. Unfortunately it is extremely unlikely that it will successfully execute from this new location. However, it WILL load. The secret in executing it is to add a small machine-code routine to shift it back down to the original location and execute the new routine rather than the original program.

Before you can do all this, you will need to know the start, end and transfer addresses of the program. This may be achieved by using a disassembler such as that published by Misosys, which has a very useful 'T' command that will examine a tape and output just this very information.

Having discovered the required addresses, use the TAPE command of TRSDOS to dump the program to disc. Now use RELO to change the loading address. Suppose the program starts at 4300H, has a transfer address of 4350H and ends at 7FFFH. To help keep track of numbers, specify a new start at 8300H, ie RELO FILENAME (ADD = 8300).

When this operation has been completed, LOAD the program, then enter the DEBUG utility and display the end of the program at the top of the screen. (This will now be at BFFFH.) Add the required

machine-code routine by modifying memory successively from C000H on as follows: C000-21 C001-00 C002-43 C003-11 C004-00 C005-83 C006-01 C007-FF C008-3C C009-ED C00A-B0 C00B-C3 C00C-50 C00D-43.

Locations C001,C002 hold the required start address, C004,C005 hold the relocated start address, C007,C008 hold the length of the program to be transferred (3CFFH), and C00C,C00D contain the transfer address (4350H).

An Assembly language listing of the source code to produce this machine code subroutine is shown in Figure 1.

Having thus modified memory, exit DEBUG by the 'Q' command, and DUMP the whole thing to disc:

DUMP FILENAME
(START = 8300,END = 0C00D,
TRA = 0C000)

Now just type the filename, the program should load and start executing.

The only snag is that leaving the program will cause TRSDOS to reboot, since the added machine code will have forced the program to overwrite the DOS. A small price to pay for the advantage of not having to load from tape any more!

The Misosys Disassembler referred to is available from Molimerx Ltd., of Bexhill.

Figure 1

Assembly language listing of machine-code routine to move program from 8300H to 4300H and execute at 4350H

VISION STORE

LOOK BEFORE YOU LEAP

Local dealers have recently sprouted countrywide and this month we look at an up-and-coming Kingston store.

Until recently if you wanted to look at a large range of computers and software you have had to travel into the centre of London or any other major city. But that is now changing.

Nestling in the prestigious Eden Walk Precinct in Kingston Vision Store offers a selection of machines and software that you would not expect to find outside central London.

Vision Store was set up at the beginning of October by Jan Murray. He had just completed several years with REW Audio Visual, running their shops which sold Hi-Fi, video and recording equipment. During his time with REW some of the shops dabbled in computers and this prompted Jan to buy an Atari 800 computer for his own use at home. He soon came to realise the potential for the home computer market, so on his departure from REW he immediately set up his own shop to sell computers, along with Hi-Fi and video equipment.

Since its instigation the people at Vision Store soon found that the demand for the computers far outstripped their initial expectations. They carry an impressive range of computers, starting at the bottom end with the ZX81 and the VIC-20, moving up through the mid-price computers including the Dragon 32, Atari 400 and the Commodore 64 and at the top end stocking the Atari 800 and the PET range to cover the business end of the market. By the time you read this they should also be carrying the Oric-1 and the Sinclair Spectrum.

Their premises are large and modern, with the computers sharing display space with a large number of videos, televisions and tape recorders, although this will soon change to give more space to the demonstration and display of computers. The staff are on the whole friendly and enthusiastic and are always willing to take time to discuss customers requirements, or to demonstrate some new piece of software.

Vision Store's prices are about par for the course but they do offer special packs to suit most needs and these often work out cheaper then assembling the parts separately. They will also consider part exchange or purchasing second hand equipment.

To complement the shop's range of computers they also attempt to carry as comprehensive a range of software and peripherals as possible. They carry all the software from the machines' manufacturers as well as most of the independent software available. Particularly impressive was the range of American software which they had obtained for the Atari 400/800 computers. The staff do not object to demonstrating the software, so at least the customer can see what he is buying, before having to part with his hard earned cash.

A Plethora of Peripherals

One of the peripherals in stock which particularly drew my attention was the B Key 400. This device could be a godsend for all frustrated Atari 400 owners. The B Key 400 is a proper typewriter style keyboard to replace the touch sensitive keyboard on the 400. It costs £79.95, along with a charge of about £9.00 if you want the people at Vision Store to fit it. They will also undertake an internal upgrade for the 400 to put it up to either 32K or 48K. If you were intending to buy an Atari 400, but were put off by either the lack of memory or the thought of having to type on a touch sensitive keyboard then it could be worth your while checking out some of Vision Store's Atari deals.

In the future Jan is intending to set up more Vision Stores around the South-East of England, but if you can't wait until one arrives on your doorstep then they also run a blossoming mail-order business.

If you're thinking about buying a computer, some software or some peripherals and don't fancy a trip to see the big city lights, I would recommend a trip to Kingston to see Jan Murray and his crew. The address of Vision Store is: 3 Eden Walk Precinct, Kingston-on-Thames, Surrey. Tel: 01-546-8974. ■

Let Commodore expand your horizons.

VIC 20 is the finest home computer that money can buy.

And the better you get to know it, the more confident, adventurous and ambitious you'll become.

You'll want to take advantage of the vast range of VIC software: a superb and constantly-growing selection of programs, embracing business systems, entertainment, education and many applications in the home.

Every program in the series has been designed by experts, and chosen for its quality and value for money.

VIC business software covers a wide range of applications, including spread-sheet analysis, stock control, information handling and word-processing.

A mind-blowing range of games including Scott Adams' world-famous 'Adventure' series.

Advanced space games, including the sophisticated 'Omega Race'.

Learn subjects as diverse as English Language, programming, and biology.

And 'home' software ranges from IQ tests to Robert Carrier menus.

In addition, there is a range of VIC software, like programmers' aids and graphics packages–

to add to your understanding and enjoyment of computers and computing.

There's even a special 'VicSoft' Club for VIC 20 enthusiasts, with many advantages including special offers to club members.

VIC software will expand your horizons. And your mind.

PRICES RANGE FROM £4.99 to £24.95 INC. VAT.

NEW!!

QUALITY SOFTWARE FOR THE BBC MICRO

GALAXIANS (32K) £6.50
Fast action version of the popular arcade game. 4 types of Galaxian (in 3 initial screen formations) swoop down individually or in groups of two or three. 6 skill levels, hi-score, rankings, bonus laser bases, increasing difficulty, superb graphics and sound.

CENTIPEDE (32K) £6.50
Incredible arcade type game featuring mushrooms, flies, snails, spiders, and the centipedes of course. Excellent graphics and sound. 6 skill levels, hi-score, rankings, bonuses, and increasing difficulty as the spiders become more active and the mushrooms increase.

FRUIT MACHINE (32K) £6.50 ***** NEW RELEASE *****
Probably the best fruit machine implementation on the market. This program has it all . . . HOLD, NUDGE, GAMBLE, moving reels, realistic fruits and sound effects, multiple winning lines. This is THE fruit machine program to buy.

ALIEN DROPOUT (32K) £6.50 ***** NEW RELEASE *****
Based upon the arcade game of ZYGON, but our version improves upon the original arcade game itself. You have to shoot the aliens out of their "boxes" before the "boxes" fill up. Once full, the aliens fly down relentlessly, exploding as they hit the ground. Suitable for use with keyboard or joystick.

INVADERS (32K) £6.50
Superior version of the old classic arcade game including a few extras. 48 marching invaders drop bombs that erode your defences, and 2 types of spaceship fly over releasing large bombs that penetrate through your defences. Hi-score, increasing difficulty, superb sound effects and graphics.

SPACE FIGHTER (32K) £6.50
Arcade-style game based upon features from DEFENDER and SCRAMBLE. 5 types of menacing alien fire at you and may attempt to ram you. Separate attack phases, fuel dumps, asteroids, repeating laser cannon, smark bombs, hi-score, rankings, 6 skill levels, bonuses.

*** WE PAY 25% ROYALTIES FOR HIGH QUALITY PROGRAMS ***
Please add 50p per order for P & P + VAT at 15% *** Dealer enquiries welcome.

OPERATING SYSTEM

MINDOS: Authorised subset of Apparat's NEWDOS+. This can be supplied if required to run above 40 track disk packages; model I only. Abridges instructions included: sssd mini-disk **£11.50** price includes packing, post and VAT.

CHALKSOFT

BBC

Our programs are not just fun — they're an education!!!

CHALKSOFT is a Software House specialising in Educational programs for Parents and Teachers of children aged 4-15. Our guaranteed cassettes are available by mail order from selected dealers. Examples (all for the BBC-32K) available now:

Angle Set of 4 graded programs demonstrating Angle as "turning", degrees, names of various angles (reflex, acute, full turn, etc.), how to use a protractor. Then children answer questions to check their understanding — they even measure angles direct from the screen. Uses graphics to the full, and a smiley character! Ages 8-14 **£6.95**

Inkosi Be an African King! If your strategy is good you may stay for 10 years. But watch out for the witch doctor. Colourful simulation with great graphics and sound — for ages 10-adult **£5.95***

Invisible Man Draws and labels a grid and displays a man who disappears! Feed in co-ordinates to find him in the time allowed. With compass point clues; children love it. 3 levels of difficulty — ages 7-14 **£5.95***

Letters Draws slowly (and correctly) full-screen lower case letters of the alphabet — in set of 5 programs. Invaluable aid for teachers and parents of children aged 4-6. Many features built in; with booklet. Uses well-known writing scheme format. Teacher checked **£9.95**

Metrics Set of 5 programs giving practice in the metric system — mass, volume, capacity, length and area — for children of 10-15. Good sound and visual effects and score is kept! Useful revision aid **£9.95***

Pascal 2 programs show construction and properties of Pascal's Triangle, then ask questions about it. All with good graphics **£5.95***

Sequences Menu-driven demonstration, with good graphics, of 7 important no. sequences, such as Factors of 3, Fibonacci, primes, triangular no's etc. Good to dip into! **£5.95***

FOR THE VIC-20
The programs marked * are also available for the Vic-20 — all are **6.5K** versions.

COMING MARCH

Punc-Man Gobbles commas, full-stops etc. Good for punctuation practice **£7.95**

Capital Letters Complement the "Letters" program set with Upper Case. Set of 4 progs. **£9.95**

Story A For ages 7-11. Just like a story book on the screen but choose your own plot! With many illustrations and endings.

FACTFILE

MICRO FACTFILE

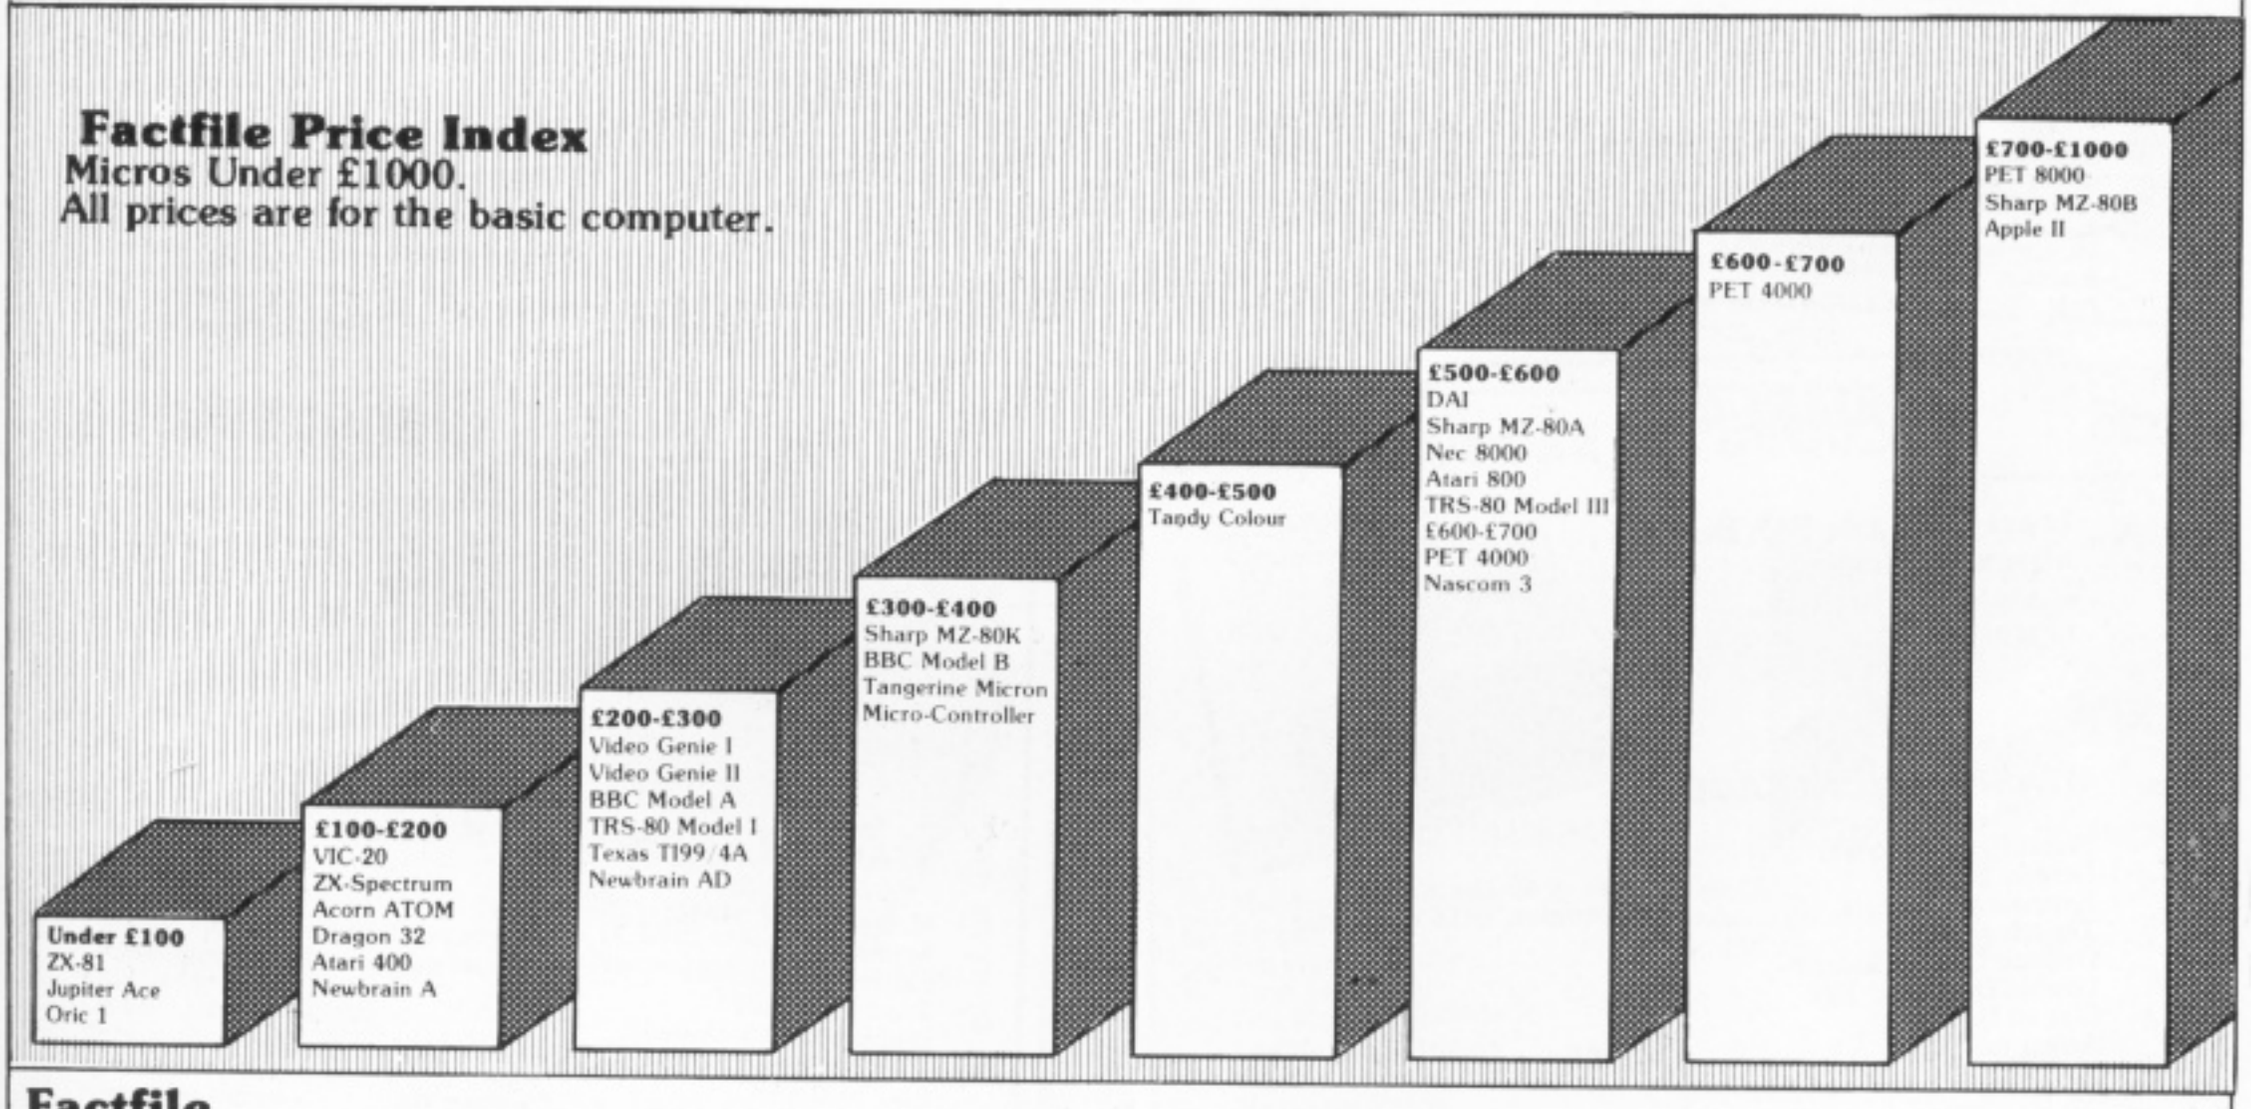

Factfile is our regular buyer's guide to microcomputers. Herein you will find all the important facts and figures on 28 of the most important micros on the market under £1000. The idea is that you are able to directly compare what different manufacturers are offering you and how much they are charging you for it. Many brochures and adverts bury the reader in a mass of irrelevant facts and figures, which make it difficult to judge one against the other.

Factfile sorts it all out for you!

Just look down the price index to discover which machines are in your price-range and then consult the 'cards' on each. All the information is in a standard form and has all been checked by our technical staff. The section is presented alphabetically.

As new machines become available, we will add them into the FACTFILE as soon as we can.

Factfile Price Index
Micros Under £1000.
All prices are for the basic computer.

Factfile

RAM: Stands for Random Access Memory and it is in there to accept the user's programs. Amount of memory is measured in "thousands of bytes" or "K" ie, 8K. A byte is a computer 'word' or single piece of information, made up of eight 'bits' which are just 1 or 0. Hence you need thousands of bytes to store a reasonable size program, since each letter, number, full stop, comma, line number, etc, uses up computer 'words' quite rapidly.

As a guideline – you can get about 50 program lines into 1K and 250 into 8K. This is a rough estimate – don't take it literally! The figures are not straight multiples, because you need to allow the machine space to work on your listing, once you've typed it in.

ROM: Read Only Memory. The machine can look and see what is stored in the memory, but it cannot alter the contents, nor store anything new. Generally used for control programs, where the micro consults the memory to see what to do next at various points in the program. Languages, such as BASIC, are stored in ROM and allow the machine to interpret what you type in, in terms of its own 'machine code'.

SIZE OF BASIC: The number of bytes occupied by the BASIC language is important, as it is an approximate guide to the BASICs versatility. The more powerful the language, the easier it should be to use.

BUS CONNECTION: A socket on the micro which allows it to be linked up to various add-ons. This can take the form of many various items, ie, expansion box, printer, disc drives, plotting device. In short a BUS is an information 'window' through which the micro communicates with the outside world.

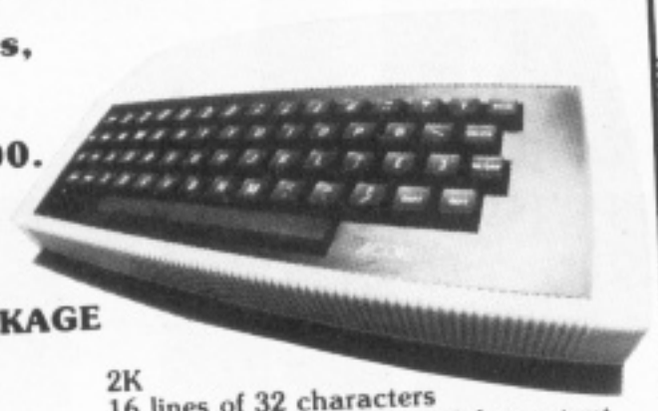

SERIAL/PARALLEL OUTPUT: This refers to the manner in which the micro transmits data to other units. If it puts out information in a long string, one bit after another, down a single wire or connector, it is a serial output. Parallel output is where pins or wires carry information simultaneously and are 'read' together as a block by whatever it is the micro is communicating with.

VIDEO OUTPUT: an output which will drive a monitor, as opposed to a TV set, allowing it's use as a screen for the computer.

WE PROUDLY PRESENT, FOR THE VIC 20

THE INTERNATIONALLY SUCCESSFUL MYSTERIOUS ADVENTURES

These superbly written, Machine Code Adventures have been enjoyed by TRS80-VIDEO GENIE owners in Britain for well over a year now and are currently taking the U.S. by storm. The Author has now implemented these absorbing programs on the COMMODORE VIC 20 FITTED WITH 8K RAM PACK.

ALL ADVENTURES IN THIS SERIES INCLUDE:
Split screen display, Ultra fast Machine code response, Save game to cassette feature, Simple two word command entry, approx. 70 Locations to visit, 30 Objects to manipulate, 20 or more "problems" to overcome.

ADVENTURES PRESENTLY AVAILABLE:
1) THE GOLDEN BATON — venture into a strange province of danger and evil magic to retrieve the stolen Baton of King Ferrenuil.
2) THE TIME MACHINE — As a newspaper reporter you have been sent to the old house on the moors to investigate the eccentric Dr. Potter . . .
3) ARROW OF DEATH (Part 1) — In the first part of this epic Adventure you must find and destroy the source of the evil blight which has befallen your homelands.

These are the first three of a series which could ultimately total more than 20 Adventures.

WARNING! — Only supreme courage and low cunning can ensure eventual success on these dangerous missions.

Telephone (0253) 27091

NOW AVAILABLE FOR THE BBC MACHINES

Combine accurate flight characteristics with the best in animation graphics and you'll have SubLOGIC's

T80-FS1 Flight Simulator

for the TRS-80

SubLOGIC's T80-FS1 is the smooth, realistic simulator that gives you a real-time, 3-D, out-of-the-cockpit view of flight.

Thanks to fast animation and accurate representation of flight, the non-pilot can now learn basic flight control, including take-offs and landings! And experienced pilots will recognize how thoroughly they can explore the aircraft's characteristics.

Once you've acquired flight proficiency, you can engage in the exciting British Ace 3-D Aerial Battle Game included in the package. Destroy the enemy's fuel depot while evading enemy fighters.

Computer and aviation experts call the T80-FS1 a marvel of modern technology. *You'll* simply call it *fantastic!*

MODEL III VERSION ALSO AVAILABLE

Special Features:
- 3 frame-per-second flicker free animation
- Maximum transfer keyboard input
- Constant feedback cassette loader

Hardware Requirements:
- Radio Shack TRS-80, Level 1 or 2
- 16K memory
- *Nothing else!*

Only £20

NEW! ZX SPECTRUM TAPE NOW READY!
NEW! EXPANDED DISC VERSIONS FOR APPLE, PET AND SHARP!

SOFTWARE FROM PCT

THE VALLEY

© ASP LTD 1982

What are you . . . Barbarian or Wizard?

Choose your character type carefully . . . Barbarians recover quickly but their magic doesn't come easily. A Wizard? Slow on the draw and slow to mature . . . but live long enough and grow wise enough and your lightning bolts are almost unstoppable . . .

The Valley is a real-time game of adventure and survival. You may choose one of five character types to be your personal 'extension of self' to battle and pit your wits against a number of monsters. Find treasure, fight a Thunder-Lizard in the arid deserts of the Valley, conquer a Kraken in the lakes surrounding the dread Temples of Y'Nagioth or cauterise a Wraith in the Black Tower. In fact live out the fantasies you've only dared dream about. BUT BEWARE . . . more die than live to tell the tale!

You've read the program (Computing Today — April '82) . . . Now buy the tape. Tape versions (£11.45 each inc P&P and VAT) available for: ZX Spectrum (48K), Atari 400 and 800 (32K), Tandy TRS-80 Model 1 Level 2, BBC Model B, Sharp MZ-80A, Sharp MZ-80K (18K), VIC-20 (with 16K RAM pack) and PET (New ROM, 16K RAM minimum).

Disc versions (£13.95 each inc P&P and VAT) available for: Apple II (DOS 3.3), Sharp MZ-80A, Sharp MZ-80K and PET 8032 (8050 drives).

Fill in the coupon and return it to CT Software, ASP Ltd., 145 Charing Cross Road, London WC2H 0EE and become one of the many to play . . . The Valley . . .

Please send me the following versions of The Valley Tape . . . . . @£11.45 all inclusive of P&P and VAT.
Disc . . . . . @£13.95 all inclusive of P&P and VAT.
I enclose cheque/PO for £ . . . . . (payable to ASP Ltd). OR Debit my Access/Barclaycard (delete as necessary)

ASP SOFTWARE

SOFTWARE LISTING

Looking for a program to buy? Look no further! If it's available, it's listed here in our exclusive and comprehensive software checklists.

Looking through any computer magazine can be a bewildering experience if you're in search of a program. Count the hundreds of ads and thousands of titles on sale and it would be easy to lose heart!

We've tried to sort out the confusion, and the sheer numbers, to present an easily understood list for each machine. Where possible, we have eliminated duplications, so that the same tape with a different label is not listed twice. Rather it should be credited once, with as many suppliers as we could find.

Table Codes

In order to fit as many programs as possible into our pages, we have had to use codes for some columns, considerably shortening the wording.

The information given for each program is: Title, memory required to run it, company producing it, whether tape/cartridge or disk, type and supplier and price.

The codes we have used are:

Program Type

GM = Game
BS = Business routine
UT = Utility (ie. programming aid)
DO = Domestic
ED = Educational

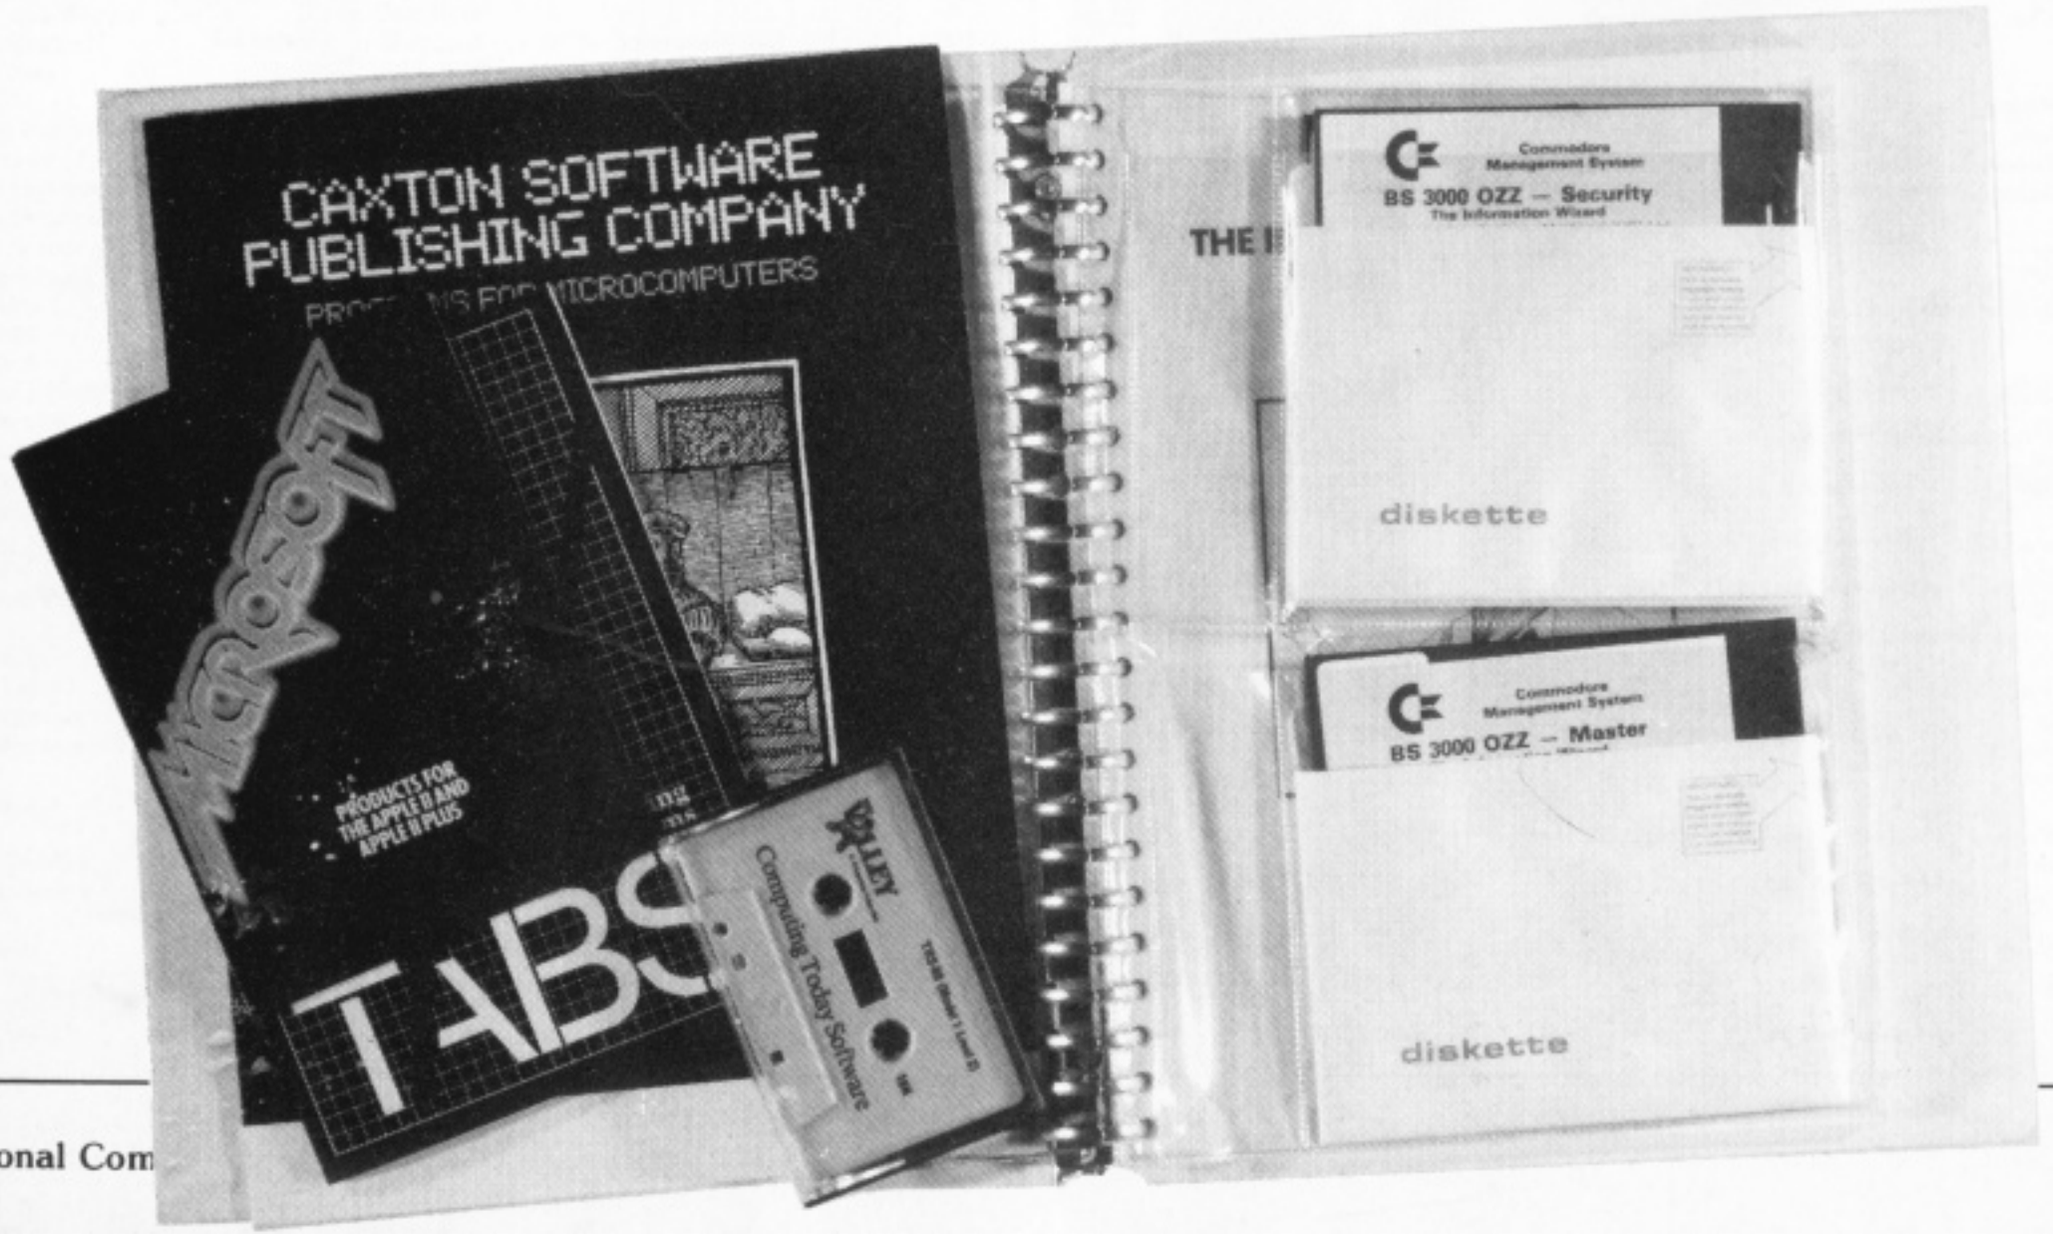

How Sold

R = Cartridge (may include memory)
C = Tape (cassette)
D = Disc (for expanded systems)
L = Listing (sold as print-out)

Due to overwhelming response we have been forced to alternate machines included in our checklist each month. Out this month are the TRS-80 and Sharp.

Not Here?

To companies whose products are not listed herein we can only say TELL US ABOUT IT! This applies particularly to the smaller retailer who may sell only half a dozen or so programs for one machine. If you produce software for *any* of the machines on the market today, then we would love to include your wares in our checklists. Send it in to us, marked for the attention of the Editor (in our format *Please*!) or ring Chris Palmer on 01-437 1002 as soon as possible.

Manchester Home Computer Show
MIDLAND HOTEL
April 22/23/24

Your diary dates are:

Glasgow . . . . . May
Birmingham . . . . . June
Nottingham . . . . September
Newcastle . . . . . October
Bristol . . . . . December

Sponsored jointly by:

Personal Computing Today
ZX Computing
Computing Today
Micro Update
Personal Software

At the Home Computer Shows will be a complete cross section of the hardware and software available to the home user. The emphasis is on the lower end of the price bracket with computers from £50-£400.

If you are interested in computers and what they can do for you then come along to our **COMPUTER ADVICE CENTRE:** experts will be on hand to give you impartial advice on equipment available.

Try out the machines in our own demonstration area and see programs running covering educational, games and small business applications.

There is a **COMPETITION** at every show to:

WIN TWO COMPUTERS.

Win a computer for yourself as well as one for the school of your choice: free entry form with advance tickets. Also available at the show with the show catalogue.

ADMISSION £2.00 (CHILDREN UNDER 8 & O.A.P's FREE)
AND IF YOU'RE A PARTY OF 20 OR MORE, THERE'S A 25% DISCOUNT

Friday 22 April '83 (10am-6pm)
Saturday 23 April '83 (10am-6pm)
Sunday 24 April '83 (10am-4pm)

The Manchester Home Computer Show
Midland Hotel. (Opposite Town Hall).

For advance tickets send cheque/postal order to:
ASP Exhibitions
Argus Specialist Publications
145 Charing Cross Rd,
London WC2H OEE
Tel: 01-437-1002

ADVANCE TICKET OFFER
MANCHESTER HOME COMPUTER SHOW

Push your Sinclair to the limit

ZX81/SPECTRUM ARCADE GAMES

NEW **ZX INVASION FORCE** (ZX81)
Use your skill to fire through the energy band to destroy the menacing alien ship — **£3.95**

NEW **SPEC INVADERS**
SPEC GOBBLEMAN
These exciting high-speed classic games incorporate hi-resolutiongraphics and sound to bring you the best in arcade action at only **£4.95** each (16/48K)

NEW **SPEC FROG 5/SHOWDOWN** (16/48K)
Hop across the dangerous road avoiding the lethal cars, then lorries. Go back to the wild west for a gunfight battle amongst cacti and wagons. Features include western music. **£4.95**

NEW **NAMTIR RAIDERS** (ZX81)
High speed, quick action arcade game with four separate groups of attackers. **£3.95**

Gobbleman also available for ZX81 at **£3.95**

UTILITIES

NEW **TOOLKIT**
Nine powerful new functions for your ZX81 (including re-number lines (goto, gosub), program merge, string finding and replacement. **£5.95**

SPEC BUG
A 30 in 1 machine code tool and disassembler for your ZX Spectrum. **£6.95**

ZX BUG
A 30 in 1 machine code tool and disassembler for your ZX81. **£6.95**

Improve your machine code programs with this new 48K Spectrum Assembler

Just released by Artic, this new professional quality assembler is also available for 16K ZX81 and features:—

• Word-processor-like text editor. • High-speed, versatile two-pass mnemonic assembler with labels and detailed error-trapping. Will assemble to any address. • Essential support facilities such as memory-edit, register inspect/modify and search for de-bugging. • Full output to ZX-printer. • Memory-status report and comprehensive user-manual.

ONLY £9.95

ZX81 & SPECTRUM

ADVENTURE GAMES

JUST RELEASED for 48K SPECTRUM
Still available for ZX81

INCA CURSE (Adventure B)
In a jungle clearing you come across an ancient Inca temple. Your mission to enter, collect the treasure and escape alive. But beware! Includes a cassette save routine. **£6.00**

SHIP OF DOOM (Adventure C)
You are unavoidably drawn to an alien cruiser. Can you reach the control room and free yourself? Or will they get you first? Includes a cassette save routine. **£7.00**

ESPIONAGE ISLAND (Adventure D)
While on a reconnaisance mission your plane loses control and you are forced to land. Can you survive and escape with the island's hidden secret? **£8.00**

PLANET OF DEATH (Adventure A) 16/48K
You find yourself stranded on an inhabited alien planet. Can you reach your ship and escape? **£5.00**

REDUCED TO £29.95

ZX FORTH

Supplied on cassette with editor cassette, user manuals and keyboard overlay. ZX Forth combines the simplicity of basic with the speed of machine code

THE ULTIMATE ADVENTURE FOR THE SPECTRUM/ZX81 for only £9.95

AND THE CHANCE TO WIN **£10,000** or more IF YOU

KRAKIT™

KRAKIT TRADE MARK OF INT. PUBLISHING & SOFTWARE INC.

RULES AVAILABLE FROM ARTIC

Your eccentric father has left you £10,000 in his will. In order to claim your windfall you must solve twelve clues and gain access to a bank account in which the money has actually been deposited. Be the first to crack the puzzle and the prize is yours! Plus you will win two tickets to the city of the secret KRAKIT™ vault location. The prize money is increased weekly. A telephone number will be supplied so you have the opportunity to find out just how much you could win.

DON'T MISS YOUR CHANCE TO WIN A FORTUNE!

A GREAT CHESS GAME FOR YOUR ZX81 OR SPECTRUM*

*SPECTRUM CHESS 48K

ZX CHESS I
Very popular machine code program, with six levels of play and an analysis option. Available for ZX81. **£6.50**

ZX CHESS II
A new improved version, with a faster response time, seven levels of play, analysis option and in addition a recommended move option. **£9.95**

ZX 1K CHESS
An incredible game in 1K for only **£2.95**

As featured on ITV

NEW **SPECTRUM VOICE CHESS**

This incredible program talks you through your game.
It tells you its move, recommends a move, and contains a range of facetious comments. The game is based on the highly successful ZX Chess II and is offered at the Christmas offer price of **£9.95**.

SPECTRUM CHESS now only **£9.45**

ALWAYS AHEAD WITH ZX81/SPECTRUM SOFTWARE

Cheques & P.O. made payable to: Artic Computing Limited. Dealer enquiries welcome.
Please state whether your order is for ZX81 or Spectrum. Send S.A.E. (6in × 9in) for catalogue.

ENTER THE DRAGON

TEACH YOUR DRAGON TO ROAR!

A fresh and highly creative collection of ready made programs designed specifically for the **Dragon 32** micro. Created by the sharpest minds in micro software today, this book will teach you how to maximise the entire range of your Dragon's impressive capabilities. Using easy-to-follow programmed listings, this book turns your Dragon 32 into a complete arcade of fast action space and adventure games. All your favourites are there including: **Dragon Invaders, Lunar Lander** and **Astral Storm,** plus there's an entire collection of fresh and exciting new games!

Each program fully extends the excellent colour resolution of the Dragon to its maximum and the action is faster than you ever thought possible.

Your overall knowledge of computer operation will be expanded too. Each program features an in-depth explanation of how and why it runs and illustrations of screen displays back up the text to ensure you understand exactly what will be achieved.

The book even includes many programming tips and hints usually reserved only for the experts. So whether you are a first-time computer user or an 'old hand' if you want to make your Dragon really perform, and feel the satisfaction of doing it yourself, this is the book that will show you how!

MELBOURNE HOUSE PUBLISHERS

MICROTERMS

Get to grips with terminology in this month's issue dictionary. A quick reference guide to common computer jargon.

Address
A label or name (usually a *binary* or *hexadecimal* number) specifying a particular *memory* location.

Array
A special variable that is used to hold large amounts of string or numeric information in a row and column format.

Assembly Language
Means of representing *program* statements in mnemonics and conveniently handling *memory* addressing by use of symbolic terms.

BASIC
Beginner's All Purpose Symbolic Instruction Code. An easy to learn, widely used computer language.

Bit
A single *binary* digit, representing either a 'one' or a 'zero'.

Bug
An error in *software*.

Byte
A *binary* number, usually of eight *bits*. It can represent a number from 0 to 255 (8-bit byte) as there are 256 possible combinations of "ones" and 'zeros" eight bits long.

Cartridge
A self-contained unit storing either ROM or RAM which plugs into a computer to expand the memory or provide a program.

Character Set
The list of letters, numbers and symbols that you can use to write programs and display information.

CP/M
A standard disc operating system that in theory allows software packages to be run on different machines. It stands for Control Program for Microcomputers.

Cursor
Character or graphic symbol used by the computer to denote where it's printing. Also used as a prompt to input information or a command.

Data
Simply, information. The raw material that the computer processes.

Debug
To correct the errors in a *program*.

Disc
Magnetic storage device allowing fast random access to a large volume of *data*. A full-size hard disc will hold, say, 5 *megabytes* or more; a smaller *floppy disc* typically holds from 80 to 250 *kilo* bytes but in either case the capacity is being increased all the time.

Display Mode
Means of indicating the form in which the computer's output will appear on the *VDU* screen. It is either text only, text and graphics or graphics only. The display mode is usually represented by a number and the difference between these numbers indicates the change in the display capabilities of the screen, for instance on the BBC computer Mode O gives a higher resolution than Mode 1.

DOS
Disc Operating System. This refers to the piece of computer code that controls the action of the disc drive. On some machines this code has to be loaded into the machines memory and on others it is present in the *ROM* onboard the disc drive. The DOS tells the disc drive how to load and save programs on the disc as well as carrying out any disc management functions such as updating the directory.

Dummy Variable
This is a variable that is defined at the beginning of a program that has no use until later on in the program.

EPROM
Erasable Programmable Read Only Memory. When programming, writing typically takes one minute and erasing, by ultra-violet light, 10 minutes or longer.

Get
A BASIC command. It tells the computer to search the keyboard and bring back the value of the first key pressed.

Gosub
A BASIC command telling the computer to go to a subroutine within a program.

Gcol
A colour command used in BBC Basic.

Hard Copy
A computer printout or listing on paper.

Hardware
All the electronic and mechanical components making up a computer system.

Hex
Shortened version of hexadecimal, meaning '6 plus 10', which is a funny way of saying 16. It refers to the number system with a base of 16. This uses 0 to 9 and then A to F of the alphabet to represent its 16 digits. Two hex digits can be conveniently used to represent a byte (eight bits).

High Resolution
This means that you can pinpoint one dot on a screen rather than one square, giving you graphical pictures of much greater detail and accuracy.

Instruction
A set of *bits* which causes the *CPU* to carry out a particular task in a program.

Interface
Circuit which connects different parts of a system together and performs any processing of signals in order to make transfer possible (ie serial-parallel conversion).

I/O
Input/Output. A computer generally has one or more *ports* through which it communicates with 'the outside world' — *peripheral* devices such as a *keyboard*, video display *(VDU)*, *printer* etc. An I/O port may be just an input or just an output or it can be bidirectional.

Kilo (K)
Normally means 1000, but stands for1024 (2^{10}) when referring to memory.

Language
A repertory of commands — symbols, expressions etc, used to 'call up' the instructions or procedures a *processor* can execute.

Location
Physical position; *memory* location is the same as *address*.

Loop
Program technique where one section of program (the loop) is performed many times over.

Machine Language (or Code)
The lowest (and most tediously detailed)

level of *program instructions*. All higher level coding must be converted to *machine language* (by *compiler* or *interpreter)* before a *processor* can obey it.

Memory Map
Chart showing how *memory* is used by a computer. The arrangement of *data* and *program* within the memory.

Menu
A set of options displayed on-screen by a computer program from which the computer user can make a selection to implement.

Modulator
A device, included in every good hobby computer, which takes the computer's output and converts it to an RF signal on a suitable TV channel, giving you a cheap, convenient visual display.

Monitor
(1) The first level of computer *operating systems:* the *program* which turns *machine code* commands into action, managing input, output etc.
(2) A TV-type device which is specially constructed to handle video signals from a computer that does not have a *modulator*.

Parallel / Serial
Denotes the manner in which the computer's output is sent to its peripheral devices. Serial means that the information is passed out one byte after another and it uses a system of special characters to signify control codes of the device. Parallel communications are sent out along a series of wires using the high or low state of the wire to indicate which bits are set and therefore making up a byte.

Pascal
A very powerful, structured computer language, available on a variety of microcomputers.

Peek
This BASIC command reads a value from a location in the computer memory. It can be used to access either RAM or ROM.

Peripheral
Device attached to a computer, eg *printer, plotter, disc* unit, but not necessarily essential to its use.

Pixel
The single dot that is used to create characters displayed on the VDU. Also the smallest display unit when using high resolution graphics.

Poke
This command places a value in a location of the computer's memory. It can only be used to access RAM or control registers.

Port
Terminal which the *CPU* uses to communicate with the outside world.

Print At
A BASIC command telling the computer where to begin printing.

Print Out
Same as *hardcopy*.

Program
A set of *instructions*, which tells the computer to perform a sequence of tasks also called software.

PROM
Programmable Read Only Memory. Proms are a special form of *ROM*, which can be individually programmed by the user.

Qwerty
The traditional typewriter keyboard layout adopted by computer designers.

RAM
Random Access Memory. *Data* may be written to or read from any location in this type of memory.

Register
A general-purpose *memory*, or set of memory *locations*, built into the *microprocessor* itself. Sometimes, particular registers may be designated for a specific purpose.

RND
In BASIC this stands for RANDOM and instructs the computer to select random numbers, it is often used in games programs. Because the numbers thrown up are mathematically related to the number preceding they are called pseudo-random numbers, not true random-numbers.

ROM
Read Only Memory. *Memory* device which has its *data* content established as part of manufacture and cannot be changed.

Routine
A whole *program* or part of a program designed to perform a single function or action.

RS232
A communications *interface* used for *modems* and for serial *printers*.

Sequential File
This is a data file that can be created on either a disc or a cassette system. As its name suggests, the information is stored one piece after another. If this information is to be changed or modified in any way then the whole file has to be read back into memory and then written back again once the changes have been made.

Software
The different kinds of *program* required to work a computer.

Source Code
Program written in one of the *high-level languages* and requiring *compilation* into *machine language* before use.

String
A sequence of characters used in a program.

Subroutine
A part of a *program* which performs a specific task and which is available for use elsewhere in a program, as often as you like.

Syntax
The grammar of a programming *language*.

Tab
Really stands for tabulate and allows you to automatically put figures and/or words into columns, forming a table.

Toolkit
Name given to a piece of code that runs in a computer independantly of any other programs and adds commands to the machines language to make the process of programming or debugging easier. Commands such as Renumber, Auto and Trace are common in toolkits. Toolkits take the form of a program that is loaded into the machine on power-up or a chip that is inserted on the circuit board which is then initialised by a SYS or USR call from the operator.

Variable
A symbol used in programming which is assigned a numeric memory address. You can change the value of variable at will to suit the program you are writing.

VDU
Visual Display Unit. Usually a TV set in hobby computers, but may be a video monitor which accepts the output directly from the computer.

Z80
Widely used microprocessor. It is used in the ZX81, Spectrum and TRS-80.

6502
Another widely used microprocessor. It is the heart of the PET, Apple and Atari computers.

100 FREE PROGRAMS
FROM SILICA SHOP — WITH EVERY PURCHASE OF AN
ATARI 400 800

ATARI

ATARI PRICES REDUCED!
We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K	**£199**
ATARI 400 with 32K	**£248**
ATARI 800 with 16K	**£349**

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.
