News Desk

Peanut micro to challenge Apple

THE PEANUT costs just over £300 and is being imported from the Far East by Peanut Computers for sale in the UK in April.

"In a nutshell" said the company's Chris Roberts "the machine offers the facilities of an Apple for a fraction of the cost."

The 6502-based, 48K, colour computer will run software written for the Apple II and will accept the range of applications cards — such as the Z80 card for CP/M — produced for the American machine. The Peanut also has a cassette interface (1,500 baud), monitor and tv outputs, and a full-size integral keyboard.

Display format in low-resolution mode is 40 × 48 characters, each 7 × 5 pixels. The high-resolution mode has a black-and-white resolution

Continued on page 5

CTA holds inaugural meeting

THE Computer Trade Association (CTA) — formerly the Society of Computer Manufacturers, Agents and Dealers — held its first meeting last Saturday.

The aims of the association are to develop a recognised code of practice and trading standards for the industry as a protection for the buying public. The group also hopes to resolve problems in the trade — to tackle issues of copyright protection, illegal copying, trademark and licence infringements and unauthorised hiring and lending of software.

At this first meeting, Tony Sheil of Knot Komputing was elected Chairman and Nigel Backhurst was elected Secretary.

A working party was set up to produce a draft constitution and begin working on a framework of ethical guidelines that will become the CTA's code of practice. A separate committee was set up

How to submit articles
Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your program returned you must include a stamped, addressed envelope.

Accuracy
Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

British software writers have long been highly regarded by the rest of the world. Many of our top business and applications programmers are now working abroad, tempted by salaries and conditions that UK firms cannot match.

Now it would appear that British games programmers are about to tread the same path as their more business-orientated predecessors. Parker Brothers placed an advertisement in this week's *Sunday Times* for "Hardware and software engineers — the challenge in electronics is the games people play". The US-based firm is offering up to £30,000 a year for graduate programmers, with three years experience of Z80, 8085 and 6502 assembly languages, who are willing to move to Boston.

With the Timex/Sinclair 2000 due to be launched in the US in June, there is clearly a demand for innovative programmers. British software for the ZX81/TS1000 is already selling well in the US — and most of the major UK firms have already tied up distribution deals for their Spectrum software.

While the incentives for budding games programmers to move abroad are clearly great, I cannot help hoping they will be resisted. Rather than exporting our top programmers, I would prefer to see us exporting our top programs.

Next Thursday

Do you have what it takes to rule a country? Could you defend a state against its enemies without starving your own population to death? Find out next week in King Cedrick, a new game for the unexpanded Vic20.

TELEWRITER™
the DRAGON 32 Word Processor

TELEWRITER

Telewriter is the powerful word processor designed specifically for the DRAGON 32 Computer. It can handle almost any serious writing job and is extremely easy to use. It has all the advanced features you need to create, edit, store, format and print any kind of text. With Telewriter you can quickly produce perfect, finished copy for letters, reports, term papers, articles, technical documentation, stories, novels, screenplays, newsletters. It is also a flexible and efficient way to take notes or organize ideas and plans.

51 × 24 DISPLAY

The DRAGON 32 is an incredibly powerful and versatile computer, but for text editing it has some major drawbacks. The small 32 character by 16 line screen format shows you too little of the text and, combined with its lack of lower case letters, bears little resemblance to the way text really looks on the page. Reverse video in place of lower case just adds confusion.

Telewriter eliminates these shortcomings with **no hardware modifications required.** By using software alone, Telewriter creates a new character set that has **real lower case letters,** and puts 24 lines of 51 characters on the screen. That's more on-screen characters than Apple II, Atari or TRS-80 Model III. That's more than double the DRAGON 32's standard display.

FULL SCREEN EDITOR

The Telewriter editor is designed for maximum ease of use. The commands are single key (or single key plus control key), fast, and easy to remember. There is no need to switch between insert modes and delete modes and cursor movement modes. You simply type. What you type is inserted into the text at the cursor, on the screen. What you see on the screen is always the current state of your text. You can move quickly through the text with one key cursor movement in all 4 directions, or press the shift key simultaneously for fast, auto-repeat. You can jump to the top or bottom of the text, and beginning or end of a line, move forward or backward a page at a time, or scroll quickly up or down. When you type past the end of the line, the wordwrap feature moves you cleanly to the next.

You can copy, move or delete any size block of text, search repeatedly for any pattern of characters, then instantly delete it or replace it with another. Telewriter gives you a tab key, tells you how much space you have left in memory, and warns you when the buffer is full.

. . . truly a state of the art word processor . . . outstanding in every respect
– The RAINBOW, Jan. 1982

The only one with all these features for your DRAGON 32

51 column × 24 line screen display
Sophisticated full-screen editor
Real lower case characters
Powerful text formatter
Works with any printer
Special MX-80 driver
Requires absolutely no hardware modifications
★ Tandy colour version also available

FORMAT FEATURES

When it comes time to print out the finished manuscript, Telewriter lets you specify: left, right, top, and bottom margins, line spacing and lines per page. These parameters can be set before printing or they can be dynamically modified during printing with simple format codes in text.

Telewriter will automatically number A4 pages (if you want) and centre lines. It can chain print any number of text files from cassette without user intervention. You can tell it to start a new page anywhere in the text or pause at the bottom of the page.

You can print all or any part of the text buffer, abort the printing at any point, and there is a "Typewriter" feature which allows you to type straight to your printer. Because Telewriter lets you output numeric control codes directly (either from the menu or during printing), it works with any printer (Tandy, Seikosha, MX-80, Okidata, NEC 8023, C. Itoh 8510, Centronics, GE Terminet, Smith Corona TP-1, etc.). There's even a special driver for the Epson MX-80 that lets you simply select any of its 12 fonts and do underlining with a single underline character.

CASSETTE INPUT/OUTPUT

Because the Telewriter makes using cassette almost painless, you can still have a powerful word processor without the major additional cost of a disk. The advanced cassette handler will search in the forward direction till it finds the first valid file, so there's no need to keep retyping a load command when you are lost in your tape. The Verify command checks your cassette save to make sure they're good. You can save all or any part of the text buffer to cassette and you can append pre-existing files from those you have in the buffer already.

ASCII COMPATIBLE

Telewriter turns your DRAGON 32 into the most powerful, lowest cost, word processor in the world today. But that's not all. The simple ASCII conversion program provided with Telewriter means you can use the full power of the Telewriter editor for creating and editing BASIC and assembly language programs. It means you can use Telewriter to prepare or edit text files used with any data communications program.

Telewriter costs £49.95 on cassette and is

No Spectrum upgrades

SINCLAIR Research has not yet begun to offer Ram upgrades to convert 16K Spectrums to 48K machines.

Ever since the Spectrum was first advertised in June last year the company has promised the upgrade. "The problem is not how to do the modification," said a Sinclair spokesman, "but how one makes the upgrade available.

"We plan to make the service available in sections of 16K purchase, fairly and in sequence," he said.

Apparently the upgrades will begin "in a matter of a very few weeks," at a cost of £60 which includes parts, labour and all postal charges.

Monopoly no more

PARKER Brothers has lost its battle to keep its US trademark in the Monopoly board game (see *Popular Computing Weekly,* February 24).

The US Supreme Court last month upheld an earlier California appeal court decision that the word 'Monopoly' had become a "commonly descriptive name for real estate board games." The court ruled that Parker Brothers was therefore no longer entitled to the trademark it has held since 1935.

Peanut power

Continued from page 1

of 280 × 192 pixels — colour resolution in this mode is 140 × 192 pixels. Both upper and lower case characters are provided.

The basic Peanut costs £299 plus VAT. Other prices (exclusive of VAT) are: disc drive card, £27.95; Z80 card, £46.50; Centronics interface, £33.75 and RS232C, £38.25. Language cards and an 80-column card also cost around £40. A disc drive is also available — cost under £200.

"The Peanut is priced very realistically," commented Mr Roberts. "If it seems so then one should ask why the Apple is so expensive."

The Peanut Computer will be available from the middle of April by mail-order only from: Peanut Computers, Dewsbury, West Yorkshire.

CTA to investigate lending libraries

CTA chairman Tony Sheil (facing left) and secretary Nigel Backhurst (facing right).

Continued from page 1

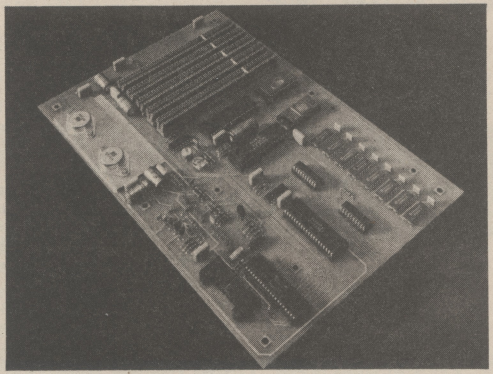

to investigate questions of copyright and software lending.

The CTA is to develop a standard warning against unauthorised use of software. A watchdog will monitor the activities of lending libraries. It was suggested that the CTA might follow this with an action to fight a test case.

Membership of the CTA now includes Atari, Tandy, Camputers, Bug-Byte, Silversoft, Carnell, Virgin Games, Oxford Computer Publishing, Lothlorien, Microware and Buffer Micro Shop.

The next meeting, to be held in London on Tuesday, March 29, at 11 am (venue yet to be decided) will consider the draft constitution and the code of practice. Details from Nigel Backhurst (Tel: 0530 33566).

Build your own micro

A 6809E based computer board is being manufactured by Adaptors (Engineering). All that is needed to turn it into a powerful computer is a keyboard and a tv.

The board includes 64K Ram. Its 16K on-board firmware provides Basic, 6809 assembly language and D9E Hex editor. Keyboard input is standard Ascii — output to a black-and-white television or RGB colour monitor is possible. A colour encoder board, which decodes the colour and upper and lower case for use with an ordinary colour tv, is available as an option.

Interfaces include a 1,600 baud cassette port and five 50-way buffer ports. These latter can be used to connect discs, parallel or serial I/O ports, up to 2M of additional memory, or a sound board.

The central C9E board will sell for £185. The keyboard is priced at £40, the mains adaptor is £10.70 and the colour encoder board (available late April) is £56. The disc interface and operating system — Flex 9 or a free format system (enabling individual disc operating systems to be supported) which can handle up to eight double-sided double-density drives — is £120. Serial and parallel interfaces are scheduled for May.

Memory expansion options include a 64K unit with Z80 second processor to run CP/M for £97 or a 128K board for £160 which can be simply expanded (only the chips are required) to 2M.

More details from Adaptor (Engineering), 94 Tower Hamlets Road, Forest Gate, London E7.

Apple fights to ban cheap imitations

APPLE is continuing its campaign to stop the import and sale in the US of what it claims are low-cost Apple II look-alikes — so-called "rotten apples".

The company has persuaded the US International Trade Commission to look into alleged infringements of Apple's patents and copyrights in machines produced in the Far East — Hong Kong, Taiwan and Singapore.

This move follows Apple's earlier, unsuccessful, attempt to take legal action in Taiwan against two companies — Sunrise Computer Services and Golden Formosa. The actions were dismissed by the Taipei court on a technicality. Apple claimed infringement of copyright in the Apple II Rom.

Apple II "look-alikes" on sale in the US and Europe can be bought for less than half the cost of the original machine.

Price unchanged

TEXAS Instruments' £50 discount voucher scheme for the TI 99/4A home computer has been so successful that the offer is to be continued indefinitely.

"The major reason the 99/4A machine was not selling was price," said Michael Lunch, TI (UK)'s managing director.

The TI99/4A now sells for between £149.95 and £159.95.

THE FLEXIBLE COMPUTER SYSTEM FOR THE FUTURE

ORIC-1

CREATED BY TANGERINE

How can Tangerine promise you a professional computer for only £99.95? Because, unlike most computer builders, we have designed the U.L.A. ourselves.

This makes the ORIC-1 substantially more reliable and versatile to work with and what's more, at £99.95, you get a professional system well below the price of all leading manufacturers.

We can give you prompt service, quality, reliability and full technical backup: The ORIC Computer System will guarantee you that and more:

ONLY £99.95 (inc. VAT) FOR 16K RAM VERSION

- 8 colour graphic display (8 foreground + 8 background)
- 40 character by 28 line colour text display
- High resolution graphics (240/200 pixels) 240 across screen, 200 down
- 96 User defined graphics symbols
- Microsoft BASIC software
- 6 octaves of music with Hi-Fi output and 4 preset sound effects – Shoot, Explode, Ping, Zap
- Centronics printer interface (compatible with a whole range of standard printers)
- Optional Communications Modem (allowing access to 200,000 pages of Prestel and direct link with other computers)
- Typewriter style keyboard
- Professionally written user manual by well-known computer authors
- Oric Owner Magazine included with each ORIC 1 purchased
- Tan-Forth supplied free with every mail order 48K Model
- Extended Basic (BBC etc) available soon
- Full range of business and leisure software coming shortly.

(Please allow 28 days for delivery) Subject to availabilities.

Order your ORIC-1 direct from the designers

Machine code instructions

I noticed in this week's *Popular Computing Weekly* (January 20-26), in the *Peek & Poke* column, a question about three Z80 machine code instructions: *'in f,(c)'*, *'ld (nn), hl'* and *'ld hl, (nn)'*.

The seven *'in'* instructions that input into a register, using the *'c'* register as the port address, are well documented in the Z80 assembly language manual. They have the side effect of setting the flags to show the status of the data byte read in — whether it is zero, positive, etc.

The *'in f,(c)'* instruction is not well documented in the assembly manual (and I believe it is not available in Zilog's own assembler), but the corresponding machine code is in the Z80 hardware manual, so I felt justified in listing it as a standard Z80 instruction: it is part of the specification of the Z80 chip. Its effect is to set the flags in the same way as for the other seven instructions, but then to throw away the data byte itself without storing it anywhere.

The *'ld (nn), hl'* and *'ld hl, (nn)'* instructions derive from the way the Z80 was designed to be upward compatible with the Intel 8080. Both instructions are available, unprefixed, on the 8080, and so they had to be available on the Z80 as well. However, the Z80 also includes the non-8080 instructions *'ld (nn), bc'*, *'ld bc,(nn)'*, *'ld (nn), de'* and so on, all prefixed. It seems that it was easier to include a second, redundant, version of *'ld hl, (nn)'* and *'ld (nn), hl'* in this set.

Steve Vickers
22 Foxhollow
Bar Hill
Cambridge

For those of you who don't know, Steve Vickers wrote the Spectrum manual. He also developed the Jupiter Ace, in conjunction with Richard Altwasser.

A bug by any other name

Every Spectrum does what David Edwards describes as a bug (*PCW* December 9, 1982). It is not really a bug though.

When a six is pressed, in E mode, two control characters are inserted into the line. These are 17 and 6 (ie Paper 6). When *Delete* is pressed the Rom removes the 17 code first. When the line is reprinted the cursor jumps to the middle because the only character code in the line is now 6, which is the comma control code.

Software libraries defended

On the subject of software libraries, we believe that your readers will find the following of interest to them.

Part of our business at Cotswold Computers is the running of such a library dedicated to the Dragon microcomputer. It is our policy to approach software suppliers suggesting that a financial agreement be reached to enable us to hire out their programs. So far, we have reached agreement with 70 percent of the software suppliers who have responded to our initial contact. The minority of suppliers who do not agree to the hire of their software are however keen for the sale of their software to proceed.

Therefore, at present our library has a possible content of approximately 70 different software titles. We are also able to offer for sale at special prices 90 plus pieces of software for the Dragon. Members thus have the opportunity of sampling a majority of software before contemplating purchase.

As previously intimated the position is changing weekly as additional suppliers make contact and as new software is released.

I hope the above facts help to allay the fears of any Dragon owners concerned that they might join a library only to find it fold through lack of software — but please inquire as to whether agreements have been made with software suppliers.

Oxon

The missing link

In my piece on machine-coding the Spectrum — page 22 of your February 3-9 issue — a number has gone missing in the data for the first machine-code routine. Line 50 should read:

```
50 DATA 205, 36, 126, 135, 135, 135,
50, 143, 92, 6, 32, 62, 32, 215, 16, 251,
205, 36 (etc as printed)
```

ie with an extra 32 after 62 in the second line. Also, less seriously, the mysterious instruction:

```
LD ,32600
```

in the disassembled listing of the second routine should read:

```
LD DE, 32600
```

Recording problems solved

I am writing to you to advise you on recording problems with your Dragon 32. I am not a computer expert, but I feel I can resolve your problems. The following information has been derived from Dragon Data, audio experts and by trial and error. Now I have no problems and find the Dragon a beautiful machine to use. So please try the following tips:

1) Do not listen to people that say 'get a cheap recorder' — You will almost certainly need a good mono recorder with automatic level control in order that your data is not corrupted.
2) Volume control is important, so make a note of best setting.
3) Ensure recording heads are clean.
4) Important: On a new tape insert a pencil into cassette and wind leader tape on until it is just past the recording head. If you rewind the tape fully before saving, you will try to record the program "*Title*" on the leader tape. Hence, on loading, the Dragon is unable to find the program as it looks for the program "*Title*", but does not find it.
5) When recording a second program rewind the tape fully and type in *Skipf "Title of program"*, switch on recorder and press enter. The tape will wind on and stop just past the first program — start recording the second program at this point. Do not leave too large a space between programs, as the Dragon hears the hiss of the blank tape, and the recorder motor rumble, and responds with an *I/O* error.
6) If the above points fail, try removing the jackplug to ear socket when recording and removing the jackplug to mic socket when playing back, as sometimes a feedback loop is formed and corrupts the data.

Skewen
Neath
West Glamorgan

Compiling the errors

A few errors crept into my *Compiler* program printed in the 24 February-3 March issue of your magazine. I have listed the corrections below:

```
LINE 27 . . . PRINT"O";
LINE 50 . . . PRINT("CF" AND
              R$(PI)="O") 'O' is a
              letter
LINE 60 . . . R$(SGN PI)="I" 'I' is a
              letter
LINE 50 . . . AND R$(VAL"2")="C")
```

Also I would be grateful if you would publish the fact that my first name is *Richard*, not *Robin* as printed.

Womp-Rat

A new game for ZX Spectrum by Derek Spring

IN Womp-Rat, you are the son of a lowly moisture farmer. Your mission is to defend the farm from the hordes of thirsty Womp-Rats which are attacking it.

The Womp-Rats start from the top of the screen and move down towards your farm at the bottom. You are in the middle and can move left or right, firing your twin lasers up at the Womp-Rats until they pass you. Then you can turn 180 degrees to fire down at the remainder. You can only turn once each row of Womp-Rats and the number of rats increases with each successive wave.

The program was written to make use of *Def Fn* as a *Left* or *Right String*. Lines 10-190 set up the screen, the graphic characters and the string which contains the Womp-Rats. Lines 210-230 control the movement of the rats.

Lines 250-320 control your movement, and check to see if you are firing or turning. Lines 340-390 are your firing routine, while 400-430 check to see if you are out of the limits of the screen. Lines 440-510 are the instructions, while 9000-9030 are data for the graphics characters.

The figures in lines 20-30 correspond to graphics character keys, all being used with *Caps Shift* except 7s and 3s. Lines 170, 190, 280, 360, 365, 370 contain the defined graphics characters.

The speed of the game can be changed in line 310 by altering the maximum value of *G*, but 5 seems best.

THE DRAGON DUNGEON

TAKE INVENTORY

The Dungeon vaults are filled with peripherals, software, books and other goodies exclusively for the Dragon 32 owner — from cassette recorder leads to editor assembler — from arcade games to Database Management Systems.

Our stock of software is selective, rather than extensive, since we believe in value for money. Feed your Dragon on the best programs!

Best selling game Salamander's "Dragon Trek" £9.95.

Best-selling book "The Working Dragon 32" £5.95. Now in stock "Dragon Companion" £4.95.

We now have the widest selection of Dragon Software available in the UK (games, education, business and utilities). Send for catalogue.

DRAGON OWNERS CLUB

The Dragon Dungeon Club monthly newsletter, *Dragon's Teeth,* is packed with news, reviews and information for the dedicated Dragon-basher. The March issue of *Dragon's Teeth,* now out, includes both hardware and software offers and Club Members registering before March 31 will be eligible to purchase Dragon badges and sweatshirts at very special prices.

Annual membership, including *Dragon's Teeth,* £6 (six-month trial subscription £3.25).

C☆TECH SOFTWARE

ZX Spectrum Software

FROGGER AND SECMAN

FROGGER AND SPECMAN. Two excellent games for the price of one!
SPECMAN is probably the best version of its type with great machine code graphics and sound effects with three to five ghosts, power pills and a real munchie man who munches away in all directions unlike cheaper versions!
FROGGER, is a two screen superb representation of this arcade classic and has full colour Hi-Res Frogs, Cars, Roads, Logs, Turtles and Riverbank. Plus Super sound effects.
Both on one cassette for the Spectrum, price **£5.00.**

CENTIPEDE

CENTIPEDE AND PAINTER. By the time you read this our latest release for the Spectrum should be available . . .
CENTIPEDE is a full colour machine code arcade game where the object is to defend yourself with your Laser against a fast moving centipede which weeves in and out of the mushroom patch. There are other versions of this game but we think you'll prefer ours because we always strive for an extra dimension of realism, which makes all the difference!
PAINTER, is another well loved Arcade game, here you must paint in between the numbers on a multicoloured screen before you have to overlap. Price for the Spectrum is **£5.00.**

GORFIAN

GORFIAN INVADERS. A superb four screen machine code program with Invaders, Galaxians, Firebird and Flagship. Multicoloured Hi-Resolution graphics and Sound Effects.
For the 48K Spectrum, price **£5.00.**

KRAZY KONG

KRAZY KONG. Another 100 per cent machine code program, featuring three screens of Hi-Res Gorilla, Barrels, Fireballs, Lifts and a Running and Jumping man who must rescue his girlfriend from the enraged KONG! For the Spectrum, price **£5.00.**

DRAGON

FIGHTER PILOT/ CITY BOMBER

FIGHTER PILOT is an ingenious program for the Dragon 32. It begins with a briefing session giving details of the fire attack waves and shows you pictures of the aircraft which include Messerschmidt and Junkers. You have to get the aeroplanes within your sights and shoot them down. There are five different screens including a parachuting sequence. It makes full use of Hi-Res graphics, colour and sound.
CITY BOMBER involves bombing buildings whilst your plane flies lower and lower towards them. All this for the unbelievable price of **£5.00.**

HOW AND WHERE TO GET C☆Tech Software PRODUCTS
There are three ways to get the tape that you require. Firstly you can go to one of around 50 retailers in the UK and some more overseas, there is at least one in every town and several in major cities.
Secondly you can ring our Telesales on 061-366 8223 and Alison or Shirley will take your order and tell you of any other games you might be interested in.
Last the most popular way is to simply clip the coupon and send it to us at:
C☆Tech, 184 Market Street, HYDE, CHESHIRE, SK14 1EX.

Tomorrow's heroes

***David Kelly** talks to Nick Alexander, head of the newly-formed Virgin Games.*

Computers are the latest arena into which media-magnate Richard Branson is nudging his Virgin Group of companies. Branson's decision to go for video games will add another facet to an empire that has a turnover of £50m and spans the record, film, book and video industries.

This new tendril, called Virgin Games (see *Popular Computing Weekly*, February 24), is located in miniscule offices in London's Portobello Road. Nick Alexander, boss of the new company, has only been in the job for five weeks, but already he has a clear idea of what he hopes to achieve: "We will work on similar lines to a record company. Instead of having in-house programmers, we will build up a roster of successful freelancers, using Virgin's substantial resources to promote them."

The record industry is something Nick is familiar with. After leaving college, he worked for EMI records marketing such bands as *Angelic Upstarts* and *Dexys Midnight Runners*.

After becoming Marketing Manager for HMV Record Stores, he got his first taste of computers when he was appointed to mastermind Thorn/EMI's push into the video games market.

"All credit to a chap at Thorn/EMI called Byron Turner. He saw the potential in video games five years ago and he steadily built up a number of titles. When I joined all the titles were already there. What I was so pleased about, particularly as I had to market them, was that the software was original — we didn't have *Space Invaders* and *Pac-Man* rip-offs.

"What I did was to take all the programs available and put them out. Rather than just releasing five or six, we wanted to make a big impact. We didn't expect all the titles to sell well — we recognised that there were some weaker programs. The problem really for Thorn was that all the material had been produced in a vacuum — they had never been in video games before.

Virgin birth

Towards the end of last year the managing director of Virgin's record chain left to go to a video company. And, largely because of Nick's earlier success in giving the HMV record stores a facelift, Richard Branson approached him to see if he would be interested in the job. "I said that I felt the video games market was more interesting. Richard said it was something he had been looking at too, so the idea of Virgin Games was born — it was really a series of coincidences.

"At the moment what we are looking for is existing programs to put out. Already I have been sent some material that is quite remarkable — there are people writing some very different kinds of games."

Nick is keen that Virgin Games should not get involved in doing versions of established arcade games for home computers — he feels this is a destructive approach. Virgin will operate as a marketing and distribution centre. The emphasis will be on individuals.

"I'm looking for a pool of freelance machine-code programmers who have some material so we can start to build their name. With some of the smaller companies we will credit their organisation, but it is much harder to market a software house than an individual in a way to catch the imagination of the public.

"I am sure that it is an almost inevitable part of the way the market will build up that there will be 'video stars'.

"I strongly believe that *Another Title* from Virgin Games is less interesting than *Another Title* from Joe Bloggs.

"We should have the first game out at the beginning of June — this gives us plenty of time to get our distribution sorted out before Christmas. I would like to see us put out 30 titles this year. It is unlikely that we will offer the same game on more than one machine in the beginning — I would dearly love to pick up titles that we could launch simultaneously on more than one machine but, for a program in machine-code, that is not so easy. Besides, different sorts of people buy different computers. The sort of game that would be a sure-fire success on the Atari need not necessarily do well on the BBC."

The new company is interested in software for any machine, currently available. If the Oric can be produced in quantity, then Virgin will do material for that too. "The Oric could be like the Dragon: I was amazed how the Dragon 32 sold with virtually no software back-up. I think that situation is changing though — as the market broadens, attention will switch from the hardware to the software."

The software market is still growing at a phenomenal rate. Nick points to market research which shows that 90 percent of those who buy a computer do so to learn to program. Six months later only 10 percent have done so. The rest are playing games.

To begin with, Virgin software will be cassette based. "We will keep an open mind — I have no hard and fast feeling for the carrier for our software. I don't see any rush to get into Rom for example — and I think people are happy to pay a bit less for their games. The only advantage was for piracy reasons, cartridges being more difficult to copy, but I have recently discovered that it is comparatively easy to pirate Roms. In the US there are now ways of easily down-loading Roms into a sort of Eprom. As far as I'm concerned, cartridge software now looks less attractive.

"Presentation is one of Virgin's strengths and our packaging will be innovative. We also have to try to discourage people from borrowing a friend's copy of one of our cassettes. Home taping is an enormous danger. We have seen the video-tape business almost destroyed over the last two years."

No incentive

Even now 75 to 80 percent of the video market is illegal material. If that was to happen to the software market, Nick reckons the supply of new games would just dry up — there would be no incentive.

Nick sees the new Virgin Games subsidiary as being ideally placed in the market. "We have the resources to put behind a product to market it for all its worth and to put it out to as wide an audience as possible. I see our immediate competition as companies like Quicksilva and Bug-Byte rather than Atari and Thorn. And with the resources within Virgin, we can sell more copies of a given program than they would be able to."

As for Virgin, the parent company is obviously taking the venture seriously. "Richard is aware that the record industry is not going to continue to grow at the rate it has done. He is mindful that video games could be one future for Virgin.

"The cult heroes of tomorrow could be the computer programmers, not the musicians. Rather than programmers putting on sequinned suits, maybe we will have to redefine what a super-star looks like!" ■

A word or two in your ear

***Keith and Steven Brain** take a close look at Telewriter – a Dragon word-processor.*

One of the advantages of the 'look-alike' design of the Dragon is that numerous programs have already been developed in the US for the Tandy Colour Computer, although certain differences in the Rom mean that some programs are not directly interchangeable. Without doubt one of the most impressive programs produced for the Tandy Colour Computer is a word-processing package known as *Telewriter*. A new version of this program, specially modified for the Dragon, has now been launched in the UK by Microdeal. At £50 it must be the most expensive Dragon program on offer, so what exactly does it do and can any software be worth a quarter of the cost of the computer it runs on?

The basic function of a word-processor is to create and store text in a computer in such a form that it can easily be edited, formated and printed. Word-processing is rapidly becoming the norm in the business world, but trying to explain the value of word-processing to those who have never used it is like the old Bob Newhart record where he plays Sir Walter Raleigh trying to explain tobacco to the court of Queen Elizabeth the First! While word-processing is every bit as habit-forming as smoking, the side-effects are probably restricted to eyestrain and perhaps an inability to write without a keyboard and vdu.

In essence, a word-processor replaces 'rough drafts,' 'notes on scrap paper' (or backs of envelopes), and repeated rewriting of commonly-used text. It enables you to type out your first thoughts and then easily modify them as your ideas change, before finally arranging them on the page in the most suitable way and printing them out. A standard office package like *Wordstar* costs around £250 and runs on a £2,000 machine.

Habit forming

Telewriter comes on cassette and consists of a machine code file, which is loaded by *Cloadm* in less than a minute, and started by *Exec*. The cassette contains four versions of the program, but these only differ in that they are configured for different printers. It also contains a demonstration text program and the *Convert* program. The programs are repeated on the reverse side. In addition, the package includes comprehensive documentation, comprising the *Telewriter Tutorial, Reference Manual* and *Moving Basic Programs in and out of Telewriter*.

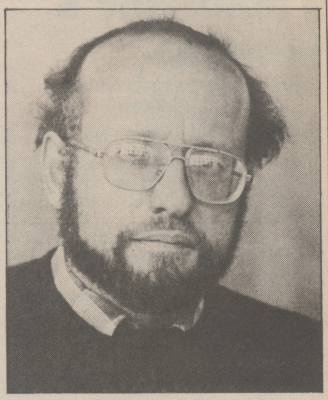

The tutorial starts from scratch and assumes no previous knowledge of programming or word-processing. It provides a step-by-step introduction to the various features of *Telewriter* in a very well-presented, accurate and understandable form. The reference manual covers much of the same ground, but in a more ordered format, and has a comprehensive index and a useful command summary table. Although the program was originally written as a word-processor, it can also be used as an extended editor for Basic programs, with the aid of *Convert*.

The only little complaint about the documentation is that the alterations for the Dragon version were obviously done with good old-fashioned Tippex rather than *Telewriter* (apparently because the only copy of the text was on the non-compatible Tandy disc version and in the US).

When *Telewriter* is executed, a copyright notice appears. Pressing *Enter* leads to the main menu, where the available commands appear in inverse video. These are *Create, Edit, Save, % Save, Read In, Append, Verify, Format* and *Words*. The main menu also gives the name of the last file read in and the amount of space remaining for text. At start-up, space is a very reasonable 18,500 characters (about 9 A4 pages), which compares well with about 7,000 in *Wordcraft* on the Vic20.

Pressing the appropriate key (first letter of word) carries out your command. *Create* and *Read In* are the only commands which destroy the material already in the text buffer, and they are carefully mug-trapped, requiring upper case confirmation of your intentions before being acted on. *Edit* leads you to the text currently in the buffer, returning you to your last position in the file.

The *Save* command requests a filename and then transfers the whole text file to cassette. As files are saved as machine code, transfer is much faster than with other low-cost systems which use Ascii dumps. The useful % *Save* feature (called as '%') allows you to save individual parts of a file, while *Append* allows you to add another file from tape to the text already in the buffer (very useful for dealing with 'standard' text and for merging programs).

Verify checks that your text has been saved successfully, before you delete your file, and is an essential part of any serious text-processor. As the program contains a useful *Auto-retry* mechanism, it does not crash if you start to playback in the middle of a file, so rewinding the tape to the start every time is not necessary.

Calling *Words* displays the number of words and lines in the current file. The final command is *Format*, which takes you to the second (format) menu which is concerned with arranging text for printout.

When you press '*C*' to create your first file, the screen clears to buff. A black L-shaped cursor flashes in the top left-hand corner next to a small black square, which marks the end of the file.

Instead of the normal very limited 32 columns by 16 lines display of the Dragon, with inverse graphics to represent lower-case, a much more useful 51 column by 24 lines display, with true lower-case, appears magically before your eyes! With-

out doubt this feature alone puts *Telewriter* streets ahead of any of other word-processing program for the Dragon that we have seen. The display is quite clear, but looks even better if you turn down the colour on your tv to give black and white. Even on an ancient 12in black and white portable, which we were using while writing this review, the picture was crystal clear. Shift-0 switches between upper and lower-case, but holding shift down in lower-case mode also produces upper-case, as on a normal typewriter.

Streets ahead

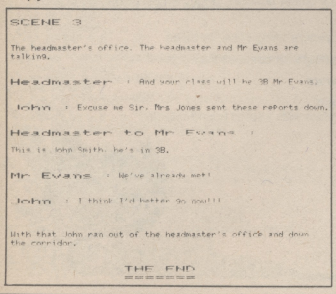

If you continue to type, wordwrap will occur when you exceed 50 columns, so that words are not broken. Text is always inserted at the current cursor position, which can be moved one character or line in the appropriate direction with the four arrow keys. If shift is held down at the same time as a cursor key, auto-repeat enables you to move faster through the file, and scrolls the screen if the top or bottom is reached.

The *Clear* key is redefined as a *Control* key (that is special functions are assigned to other keys if they are pressed at the same time as *Clear*). For example, *Clear* and the arrow keys will move you to the top or bottom of the file, or the start or end of a line, while *Clear P* pages you forward, and *Clear* – pages you backwards through the file. A character to the right of the cursor is deleted by *Break,* or a whole line may be killed with *Clear K.*

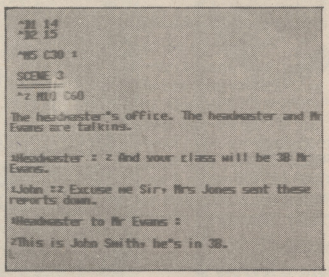

Global search and replace

When you insert additional text into an existing line, overflow may occur on to a continuation line below the current one, but the text can be simply realigned with *Clear A.* No horizontal screen scroll is provided, but this is not really necessary when you already have 51 rather than 32 characters on a line. If you are entering columns of figures, you will find the *Clear T Tab* function useful.

If block markers are placed at the beginning (*Clear B*) and end (*Clear E*) of a section, *Clear C* will produce a *Block Copy* at the current cursor position. If only the end marker is placed, then *Clear X* will cause a *Block Delete* from the current cursor position to the end marker. *Block Moves* are achieved by combining *Block Copy* and *Block Delete.*

Another very useful control function is *Clear G* for *Global Search and Replace,* which will search the text for any pattern of characters which you define, and then allow you to automatically replace them. *Clear R* gives replacement and *Clear N*

moves you to the next occurrence of the pattern. This facility is extremely useful if you want to replace people's names in a letter, or if you cannot face typing something like 'cyclopentanoperhydrophenanthrene' more than once!

If you start to insert text at the start of a long file the system slows down, as the screen has to keep rewriting, but this can be overcome by use of *Speed Mode* which inserts a temporary file end. Finally, *Clear M* returns you to the main menu.

Obviously, you will want to get your words down on to paper at some point. Pressing *F* in the main menu accesses the format menu, where your printing parameters are set. If you now just press *P,* the text will be printed exactly as displayed on the screen (provided of course that you have a printer attached). The different versions of *Telewriter* allow you to use virtually any printer (except the idiosyncratic Sinclair), but even the humble Seikosha GP-100A we use at home costs more than the Dragon.

Line Spacing, Left Margin, Characters/Line, Upper Margin, Lines/Page and *Bottom Margin* can all be specified, and all or part of a file may be printed. The default value for characters/line is 50. If this value is increased and *Edit* used to return to the text, most lines will overflow on to continuation lines. This looks a bit messy, but does not stop the program handling lines up to 99 characters long.

In addition, if *Page* is not set to zero, each page is numbered. *Wait* will halt after each page (for single sheets), and *Queue* allows the sequential automatic loading and printing of a series of files on cassette, making the effective memory capacity very high. If you use an Epson printer, then any of the four available founts can be called. The final items on the format menu are *Direct,* which allows you to send Ascii codes straight to the printer, and *Typewriter* which sends text to the printer when you press *Enter.*

Another feature usually only found on full-scale word-processing programs is *Embedded Codes,* which can be placed in the body of the text to modify printout at that point. *Format Codes* can change any of the normal parameters to give indented, respaced or emphasised text, etc, while *New Page* automatically moves the printer on to the top of the next page. *Centering* of lines is supported and a *Header* (heading) can be printed at the top of every page. Finally, use of *Define Direct* lines at the start of a file means that special control codes (up to 15 characters long) can easily be inserted anywhere in the text.

Basic programs saved in the normal manner are not compatible with *Telewriter,* so conversion is needed. To get Basic into the correct form, you first need to save the program as an Ascii dump by '*Csave*"filename",A'. The *Convert* program on the Microdeal tape is then loaded and the Ascii dump read in and converted to a new machine-code file which is compatible with *Telewriter. Convert* also works in the opposite direction, to make Basic-compatible Ascii dumps of programs written within *Telewriter.*

This method enables you to have a full screen editor which has all the functions (like line swap, replace and copy) which you wish had been included in the normal Dragon editor. You can also use it to merge programs via *Append,* or to include actual program lines in documentation. Although you can write Basic in *Telewriter,* you have to be a little careful about entering all your lines correctly. And, as you cannot Run the program within *Telewriter,* you will have to finally debug it later.

The only things obviously missing from *Telewriter* are justification (alignment) of the right-hand margin, so that the output appears 'typed' rather than in true 'printed' form, and an on-screen word, line and page status display. If these particular features are of over-riding importance, then you must look elsewhere, but you are going to have to do without a lot of other important features if you opt for one of the other Dragon word-processing packages.

Conclusion

Telewriter is undoubtedly a 'real' word-processor which provides an excellent tool for the serious Dragon user. It is suitable for the small business, or the professional writer, as well as taking care of home word-processing chores (if you can't imagine a 'home word-processing chore' you should watch three kids fighting to be first to use it for their English homework. We are used to *Wordstar* on a Superbrain, but have not noticed that much practical capability has been lost in coming down to this level. The price may look steep at first, but you really most compare it with something like the Wordcraft Rompac for the Vic20, which at £125 for fewer facilities no longer looks much of a bargain. Also, a disc version is under development for those who require greater storage capacity and more rapid access to records.

Telewriter is a highly recommended package which demonstrates the potential of the Dragon as a serious machine.

Salamander Software

DRAGON AND BBC MODEL 'B' SOFTWARE

DRAGON AND BBC MICRO 'B' SOFTWARE

DRAGON 32 SOFTWARE

DRAGON-TREK £9.95
A real time version of the classic space game featuring full colour tactical, status and long-range scanner displays, hyperprobe, the Faerie Queen, Klingons and Klingon commanders, tractor beams, enemy movement, black holes and much more. Choose from ten levels of difficulty and three sizes of galaxy. Comes complete with 16-page flight manual. JOYSTICK (1) REQUIRED. Dragon Data Approved

WIZARD WAR £7.95
A game of magical combat between the Wizards of the Tri-Suns for supremacy of the planet Xarg. Both dexterity and deduction are needed in order to outwit your opponent as spell is traded against spell. Comes complete with 12-page illustrated spell book. JOYSTICKS (2) REQUIRED. Dragon Data Approved

GOLF £7.95
An accurate interpretation of the game of golf written by a keen club player. Allows match play between two players or one player may play using the Stableford points system widely used for competition golf. Features full club selection, hazards, out of bounds and player handicaps. Dragon Data Approved

GRAND PRIX £7.95
Do you have the potential to be a champion Formula One driver? Find out, when your race on these 8 famous grand prix circuits from around the world. For 1 or 2 players. JOYSTICKS (2) REQUIRED. Dragon Data Approved

GAMES COMPENDIUM D1 £7.95
Six great games for the whole family — Donkey Derby, Blackjack, Kingdom, Hunt the Wumpus, Noughts and Crosses and Lunar Lander. Dragon Data Approved

VULCAN NOUGHTS AND CROSSES £7.95
A three-dimensional game of noughts and crosses for one or two players. Also includes a zero player option where the machine plays itself. Can you out-think your Dragon? Dragon Data Approved

THE EDG GRAPHICS PACKAGE £24.95
FOR THE BBC MODEL 'B' microcomputer

An advanced picture drawing system developed by a firm of consulting engineers to the oil and utility industries world-wide. Uses cassette tapes for software and picture storage and is controlled entirely by normal keyboard input — no extra hardware required. The main system features are:

★ Picture drawing in model 0, 1 or 2
★ Actual and Logical colour changes at any time
★ Drawing functions:
Lines, boxes, circles, arcs, text, shape repetition
★ Drawing aids: Grid, elastic band, save and home cursor (5 positions)
★ Colour fill
★ Text window showing x,y cursor position, length, angle, colour menu and current colour
★ Saving and Loading of picture using cassette tapes
★ Multi-file pictures facilitating very complex drawings
★ Flashing cross-hairs cursor
★ User instructions/prompts

This package comes complete with a spiral bound manual.

Send SAE for catalogue of our full range of Dragon and BBC model B software.
Cheques or postal orders payable to Salamander Software,
27 Ditchling Rise, Brighton, East Sussex BN1 4QL. Tel: 0273 771942.

Please add 50 pence P & P to all orders.
Dealer enquiries welcome. Programers wanted: Good royalties paid.

OPEN FORUM

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the _Program of the Week_ double our new fee of £6 for each program published.

Strikers Revenge

on Vic20

This original game takes place outside a factory. Unfortunately two of your workers are standing on the roof throwing "things" at you. You (the boss) and a director have the skilled job of catching the dropped items and then running to the waiting lorry on the left which will drive off.

You must then move back and catch more — BUT: there are only two minutes to grab as many as possible and you are only allowed to drop five things. If you manage to catch twenty you can get your revenge (on the workers) by Firing Them!

It is not as easy as it sounds — so why not try it? Movement instructions are in the program. Beware, things speed up!

Program notes

5-30	Sets variables.
35-65	User defined graphics.
70-130	Screen display.
135-165	Decides what is thrown and by which man.
170-200	Pokes the "things" on to the screen.
205-215	Checks if object is caught.
230-245	Checks keyboard, prints men.
250-255	Dropped object.
260-290	Caught object.
295-320	Ending remarks.
325-425	Sets up next screen.
430-475	Instructions.

Main variables

M = Tabulation for printing men.
M$ = String for printing the men.
L0$,L2$ = Various lorry strings.
PO = Position of object.
D = Amount of objects dropped.
SC = Score.

Strikers Revenge
by Simon Tweed

Lunar Lander

on Dragon 32

The program as listed is for use with a joystick. To change the game to play with the UP/LEFT/RIGHT arrowed keys add/change:

190 I$=INKEY$: IF I$=CHR$(8) THEN CS=0 ELSE IF I$=CHR$(9) THEN CS=63
191 IF I$=CHR$(94) THEN C2=0
192 IF I$=" " THEN CS=45: C2=45
860 IF INKEY$="" THEN 860

Change instructions from line 830 onwards to use the arrowed keys and the space bar to turn off engines. The Rem lines explain how the program works.

DRAGON 32 SOFTWARE

EDITOR/ASSEMBLER+MONITOR
Assembler functions include ORG, FCB, FDB, FCC, EQU, RMB and Hex or Decimal addition/subtraction. The ASSEMBLER is of the Two pass Global type. Monitor contains useful routines enabling the user to write and run machine code programs. Supplied on cassette + user manual £27.65

D.G.T.1
Contains five super games. OTHELLO, BREAKOUT, AWARI, MOONLANDER and RAFFLES.
Fascinating entertainment for all the family. Only £5.75

D.G.T.4 M/code.
PTERODACTYL. Destroy all the Eggs before they hatch. Beat off the attacking PTERODACTYLS.
TORPEDO RUN. Similar to the ARCADE version. 3D perspective. Ships further away give higher points.
HORNETS. Very fast game. Kill the HORNETS as they emerge, but beware when angy they swoop down firing 'stings'. All three games only £6.95

DISASSEMBLER
The ideal tool to have around. Disassemble the BASIC to see how it works. Make use of subroutines, etc.
Supplied on cassette £11.85

D.G.T.2
M/Code games. **SNAKES.** Kill them before they-kill you. Up to 12 giant snakes at one time.
LANDER. Land your craft on the Lunar surface.
INVADERS. 35 Invaders, mother ship, 3 defenders, 9 skill levels. All three games in HI-RES + sound. £6.95

CHESS M/Code.
8 Selectable levels of play.
HI-Resolution display of board and pieces. Cursor control 'move' selection.
Specifice pieces may be set up to solve chess problems.
Supplied on cassette + instructions. £7.95

ALL ORDERS INCLUSIVE. SAME DAY DESPATCH. SEND S.A.E. FOR LIST

THE VERY BEST IN MACHINE CODE FOR THE **ZX SPECTRUM** & **ZX81**

All programs supplied double-recorded and mailed 1st class by return. Prices include VAT and postage within Europe. SAE for full list.

for 48K Spectrum **MASTERFILE** business/domestic filing and reporting system. So flexible that it is equally usable for your mailing lists, catalogues, stock control, text extracts ..... applications are endless. Fully user-defined data and report display formats, dynamic variable-length file, records and data items. Fully menu-driven with powerful search facilities, sorting, total/average, update, multiple independent files, printing. Yes, we aim to support microdrive when Uncle delivers. Nearly all the 8K we use is machine code, so you get 32K per file. Comes with example file and 22 page manual. £15.00

NEW Masterfile-16 for 16K Spectrum owners. We have produced a subset version of MASTERFILE called MASTERFILE-16. It has most of the features of big MASTERFILE, with 7 pre-defined report formats and 6 pre-defined fields e.g. name, address, etc., and we have found a useful 4500 bytes of file space. MASTERFILE and MASTERFILE-16 are fully 'file-compatible' and will happily process each other's files, so that 16K owners who upgrade to 48K can use their old files immediately. Complete with 12-page manual, priced at £8.95.

PLEASE REMEMBER TO STATE CLEARLY WHICH VERSION OF MASTERFILE YOU REQUIRE.

for 16K Spectrum **GULPMAN** game of the '.... man' variety with 15 mazes, 4 chasers, laser defence, 9 grades, 9 speeds, demo mode, choice of joystick control. "An extraordinarily good program" raves Boris Allan for Popular Computing Weekly. We think you will agree. £5.95

for 16K ZX81 **GULP 2** almost identical spec to GULPMAN. £4.75

for 16-64K ZX81 **THE FAST ONE** is the predecessor to MASTERFILE and is in use all over the world now. Specification is very similar to MASTERFILE. £12.00

Campbell Systems, Dept.(PW),
15, Rous Road, Buckhurst Hill,
Essex, IG9 6BL, England.

CS

The affordable FORTH

Forth: A full implementation of this very fast running language. Ideal for writing fast moving arcade type games. Allows the full colour and sound facilities of the Spectrum to be used. Future Microdrive enhancements will be made available. 48K Spectrum only. — 19.95

Chess 1.4: 10 levels m/c. Graphic screen display. 16K ZX81 only. — 8.95

Invaders: Very fast m/c action. Includes mystery ship and increasingly difficult screens. 16K ZX81 only. — 4.45

Mazeman: A fast action m/c game that reproduces the spirit of the original. The Spectrum version includes excellent graphics and sound. 16K ZX81 and 16/48K Spectrum. — ZX81 4.45 — 4.95

Adventure 1: Based on the original game by Crowther, this game was the start of the Adventure craze. Reviewed Sinclair User.Iss.2. Features save game routine as the game can literally take months to complete. 16K ZX81 and 48K Spectrum. — ZX81 8.95 — 9.95

DRAGON and TANDY COLOR software

1. **DEMON — Machine Code Monitor — COLOR/DRAGON** **cartridge £18.95**
   A complete system for entering machine code programs, as reviewed in *Popular Computing Weekly* Vol. 2 No. 4 — "easy to use . . . a useful tool . . . reasonably priced".
   Now for Tandy Color owners as well!
2. **DECODE — Machine Code — COLOR/DRAGON** **cartridge £18.40**
   This cartridge could save you a small fortune! DECODE converts TANDY COLOR BASIC programs to DRAGON BASIC and vice versa. Just load a TANDY tape on your DRAGON, or a DRAGON tape on your TANDY COLOR, and run DECODE to convert the program into the other BASIC! (Prove it works — convert it back again!) Now all your COLOR computer owners can take advantage of all that lovely DRAGON software!
   Introductory price.
3. **DASH — Machine Code — DRAGON** **cartridge £18.95**
   A true 6809 assembler for the DRAGON Computer. Assembly statements are entered in BASIC mode and can be intermixed with BASIC statements. Use BASIC for load and save and for editing source — simple and no time wasted learning new commands. A sophisticated product for a demanding task. (Available mid-March 1983).
4. **SPACE RACE — Machine Code — COLOR/DRAGON** **cartridge £18.95**
   cassette £7.95
   Action packed arcade game. Chase around the track destroying hordes of aliens — watch out for the mines! Uses keyboard or Joysticks. 15 skill levels, high resolution graphics, sound. Addictive!
5. **C-TREK — BASIC — COLOR/DRAGON** **cassette £7.95**
   Super space adventure game, graphics and sound, destroy the Klingons before they get you. Real time operation (no time for tea!).
6. **DESERT GOLF — BASIC — COLOR/DRAGON** **cassette £7.95**
   High resolution display and good sound effects.
7. **POKER — BASIC — COLOR/DRAGON** **cassette £7.95**
   Fast action, excellent graphics and sound, machine code assisted for speed!
8. **PIRATES AHOY — BASIC — COLOR/DRAGON** **cassette £7.95**
   An adventure game. Solve the puzzles to find all the treasure — absorbing.

DRAGON 32 PROGRAMS

SULTAN'S MAZE by Christopher Hunt
Enter the 3D Maze in search of the Sultan's jewels, but beware, your strength may run out, or you may come face-to-face with the Mad Guardian. A multi-difficulty game with fantastic graphics and sound. Price **£7.95.**

EDUQUIZ I by Peter Chase
Three great educational quiz games. Bet on the answer of your choice and be a winner! Eduquiz makes learning fun! On this tape, improve your knowledge of . . . Geography, Inventors and their inventions and the Kings and Queens of Great Britain. Price **£9.95.**

EDUQUIZ II by Peter Chase
Three more subjects in the Eduquiz series. This tape helps you learn about . . . Writers, Painters and Musicans. Price **£9.95.**

FUNMATHS I by Peter Chase
Improve your maths while you play these five great games! In Number Race you must beat the computer, or a friend, to exactly 100 by eating the numbers. Maths Maze asks questions as you work your way around the maze. Chemist is a game of ratios, where you mix two chemicals, trying not to get blown up! Dragon exercises your skill at expressing coordinates — you have to find the Dragon, hidden in a grid. Last, but no means least, Simon tests your memory for tunes/colours/numbers. Price **£9.95.**

GEMPACK IV by W. E. MacGowan
Two great machine code games, with full colour graphics.
In Sea Harrier you must land your plane on the aircraft carrier, after dispersing the clouds with chemical bombs, but don't hit the ship! In Sub Chase you must depth charge the wolf pack without being sunk. Both with four levels of play from easy to kamikaze! Price **£7.95**

ALIEN BLITZ by Peter Chase
Your craft is running low on fuel and you must land! You have to use your bombs to clear a space amongst the skyscrapers, but beware of craters! A superb multi-level action game for the Dragon, with superb sound and graphics. Price **£7.95.**

FORTH FOR THE DRAGON 32

'DRAGONFORTH' is an implementation of Fig-FORTH for the 'DRAGON 32' microcomputer but with a difference.

As well as the enormous power of the FORTH language, 'DRAGONFORTH' can also execute BASIC statements. This combines the superb DRAGON sound, graphics and Floating-Point commands with the tremendous speed of FORTH to produce an unparalleled hybrid. You can write a whole program in BASIC or a whole program in FORTH or any mixture of both.

If not already convinced send £2.50 for the 60-page manual (redeemable against first order).

'DRAGONFORTH' is professionally packaged, sensibly priced, guaranteed for life and will be despatched by return complete with free demonstration graphics program.

AUTHORS: Oasis Software will market high quality programs you write in 'DRAGONFORTH'. We pay a lump sum on acceptance and a generous royalty. Let's hear from you!
OASIS SOFTWARE, LOWER NORTH STREET, CHEDDAR, SOMERSET. Telephone 0934-515265.

Sparkle

on Dragon 32

This program is designed to work on a Dragon 32. It uses the standard graphics characters available on the Dragon to give an impressive kaleidoscopic effect using most of the available colour set when using the text screen.

The program gives an endless display of colourful symmetrical patterns.

Main variables
A=Centre of design.
L=Length of one line on the screen.
G=First number of graphics available.
A$=Graphics string.

Program notes

2-5 Clears screen sets variables.
7 Selects random graphics and random colour.
9 Changes direction of display.
10-17 Displays full graphic screen.
18 Returns to start next pattern.

```
1  REM SPARKLE
2  CLS
3  A = 252 : D = -1
4  W = 4 : S = 7 : L = 32 : M = 22 : G = 121
5  DIM R$ (S)
6  FORJ = 0 TO S : A$ = "" : FOR K = 1 TO N
7  A$ = A$ + CHR$(RND(M) + G + (RND(7) * 16)) :
       NEXT
8  R$(J) = A$ : NEXT
9  D = -D
10 P = 0 : Q = S : IF D = 0 THEN Q = 0 : P = S
11 FOR K = P TO Q STEP D
12 FOR J = K TO Q STEP D
13 PRINT @ A + J * W + K * L, R$(K) ; : PRINT @ A
       + K * W + J * L, R$(K) ;
14 PRINT @ A + J * W - K * L, R$(K) ; : PRINT @ A
       + K * W - J * L, R$(K) ;

       - K * W - J * L, R$(K) ;
17 NEXT : NEXT
18 GOTO 6
```

by C Trigg

World

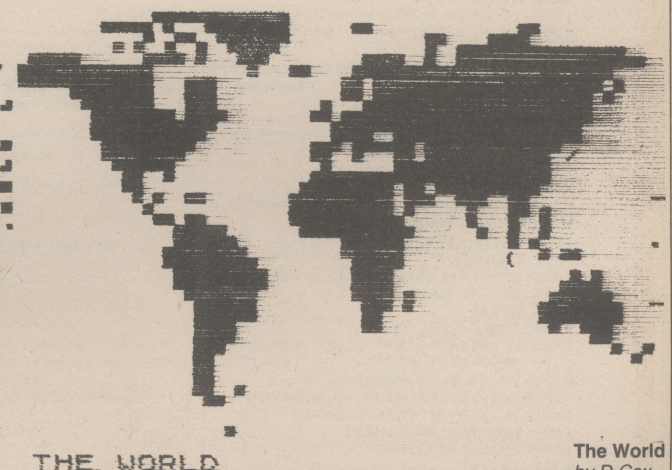

on ZX81

The World is for ZX81 with Rampack. It is quite straightforward to input and can be printed on the ZX Printer using *Copy* or by changing the *Print* statements to *Lprint*. The map occupies 20 lines of the display so that the bottom 2 lines can be used for titles or possibly time zones.

Readers may wish to try scrolling the picture to the left using string slicing or machine code methods. Spectrum owners can experiment with colour to show the different continents and perhaps use a blue background for the sea.

A competition could easily be based on these ideas.

```
10 REM THE WORLD BY D.H.COX
20 DIM U$(20,32)
30 LET U$(1)="
40 LET U$(2)="
50 LET U$(3)="
60 LET U$(4)="

The World
by D Cox

Jaws

on BBC Micro

In this game you are given 3 ships and have 30 missiles to fire. The deadly shark will move across the screen, gradually moving down, whilst dropping ravenous babies on you from time to time. The game ends when you either: run out of missiles, lose all your ships, or the shark gets to the sea bed and gobbles you up.

At the end of the game you are given a suitable comment on your score.

Program notes

This program works mainly with *Procs* and *Defprocs*. The shark is printed at lines 220 and 230, using (A,B).A$ and B$ are the variables that draw the shark. D is the position of the base.

Maths Tutor — A set of programs for teaching maths to children (3-10 yrs) **£5.00**

Games Packs: ..... **£6.50 each**
(1) Bowling, UFO, Muncher, Micropoly, Mastermind. **(2)** Race-Chase, Depth Charge, Motor Cross, Glorious 12th, Canyon Bomber. **(3)** Tank Battle, Reaction Time, Blind Maze, One Man and His Dog, Life.

Adventure programmes:
Devils Triangle — Sail to Bermuda but avoid the Devils Triangle where anything can happen. **£5.00. Earth Rescue** — Search the Universe for a rare mineral needed for Earth survival — space action. **£5.00. Desert Patrol** — Cross the desert if you can! **£4.00. King of the Valley** — Try to rule a kingdom and its people. **£3.00. Business** — Mailing List **£15.00,** Payroll **£25.00,** Stock Control **£15.00,** Home Finance **£7.00,** Tax Calculator **£4.00.** Many more programs available SAE for details.

M & J SOFTWARE

DRAGON COMPANION BOOK **£4.95**
Discover 7 extra graphics modes. Take complete control of video memory mapping. Increase the processor speed (not a hardware mode). Append programs from tape. Study the workings of BASIC with the disassembler. Incorporate useful routines from BASIC in your machine programs. Add commands to BASIC.

FORTH LISTINGS **£7**
6502, 8080/Z80, 6809, 6800, 1802 in stock.

INSTALLATION MANUAL **£5**
Necessary for implementing FORTH and its editor.

6502 MACRO ASSEMBLER **£5**
This assembler is written in fig-FORTH and will run on any fig implementation with only one alteration.

MICROTAN IMPLEMENTATION OF FORTH **£15**
This is a cassette based implementation which consists of the language, its editor and M & J SOFTWARE's 6502 macro assembler.

Cheques and POs to: M & J SOFTWARE, 34 Grays Close

SOFTWARE LENDING LIBRARY

We have for hire from **50p** (including postage) programmes for your computer.

£5 for life membership (less than the cost of a single game) brings you the Software Lending Library membership kit including catalogue, news letter and free hire of 1st programme/game.

All tapes lent with full manufacturers permission.

Send a cheque or postal order for **£5** to **Software Lending Library,** PO Box 3, Castleford, West Yorks stating name, address, and computer type.

Quality Software from BRIDGE SOFTWARE

LYNCHMOB

for ZX81 with 16K RAM **£4.95**
for ZX Spectrum (16K) **£6.50**
Hangman was never like this! A competitive game of skill and strategy for 2 to 6 players. To make things fair, the computer picks turns. If you're the lucky one, you type in a word or phrase. Then the other players guess letters. And look out if they guess wrong, because then the lynching begins! Great fun! Educational too!

EPHEMERIS

for ZX81 with 16K RAM **£6.90**
for ZX Spectrum (16K/48K) **£7.90**
For everyone interested in astronomy. An observer's guide to the universe (1975-2000). Tell EPHEMERIS your position, the date and time EPHEMERIS will tell you the position of the sun, moon and planets in the sky above you plus a whole lot more astronomical information e.g. LST, phase, rise and set times etc. (rise and set times only in ZX81 and 48K Spectrum versions). Results may be printed out on ZX Printer. A triumph of programming skill!

All inclusive prices. Sent promptly by 1st class mail.
Full money-back guarantee. Send s.a.e. for further details.

Find the Crook
by Tomer Ilan

Pencil

on ZX81

This program was inadvertantly omitted from *Popular Computing Weekly*, February 24 — March 2. It is a multiplication routine which can multiply two 14 digit numbers accurately, rather than rounding off the answer to the nearest eight digits.

The task was complicated because no functions such as *Val* could be applied to numbers greater than eight figures, as they would be rounded off. The solution was to hold the relevant numbers in strings, together with simple variables set to the same length as the appropriate strings. This program, for a ZX81, can be Run in *Fast*, but this will prevent you from seeing the computer arrive at the answer digit by digit.

WANTED

HOT SHOT SOFTWARE WRITERS

REWARD

A LUCRATIVE SLICE OF THE GAMES SOFTWARE MARKET

During the last few months the standard of games software has continued to rise.
Games enthusiasts all over the world are constantly seeking new challenges and now only the highest quality programmes can satisfy their demands.
As more and more people acquire computers, an ever increasing number find they have a flair for programming.
Furthermore, established programmers are discovering that their skills are needed as much in this market as in the recognised business field.
If YOU believe you have that 'something extra' which can turn an odinary programme into an internationally famous one, please write to us, enclosing as many demonstration tapes as you like, so that we can give you our opinion and let you know what we have to offer.

Ascender Software, 36 Richmond Rd., London N11 2QR

All you need is love

Last week I reviewed *The Hobbit*, a new adventure for the Spectrum from Melbourne House. This week, let's have a look at the ZX81, a machine that refuses to lay down and be surpassed by its flashy big brother, the Spectrum.

The ZX81 is ideally suited to text adventures — although many programs now include graphics, with varying degrees of success. In the future, I will be looking at adventures that I think succeed in one way or another.

For the moment, though, a little gripe! Remsoft, of Brighton, recently released an adventure called *Love*. The program is a fairly ordinary adventure, with the computer recognising some 200 words. But it differs from other adventures in two important ways. First of all, the protagonist is understood to be female, and second, the computer responds to emotional words such as *kiss, cry,* and so on, rather than the more conventional, active commands like *bash, stab,* or *spell*.

The authors, apparently, are female. Ms Bollen and Ms McEwen have written an adventure of which most feminists would not approve. The whole atmosphere is charged with the helplessness of the poor female heroine, who can only respond to a situation by swooning or becoming coquettish. I found that even a command to "strip naked" (given, I'm afraid, in a moment of jocularity and frustration) was taken seriously by the computer. In this case the rest of the adventure was undertaken in the nude!

This is all fairly amusing, I suppose, but I wonder if it is doing anybody any good. The original idea of adventure programs is a quest for gold or similar treasure, not some kind of simpering mince through a gauntlet of lechers with unlikely-sounding names. In Carnell Software's *Black Crystal*, to use an example, the player may specify his/her sex at the start of the game, and the computer will endow the traditional kind of program with the appropriate slant. I think that this is what should be aimed for if sex is to be brought into adventure programs.

Remsoft's cynical approach, humorous though it may have seemed at the time of writing, is surely not going to endear its products to many people. If you think I am being too serious about all this, please let me know!

Enough from the pulpit! As I said last week, I hope to be hearing from you with your thoughts on computer adventuring, as well as your own reviews of favourite programs. Do not hesitate to write in — I can only look at a small part of the total output of all the software houses.

To finish with, here is a location that you might like to include in your own adventure (it might even appear in PCW's adventure):

The player enters a room, in the middle of which stands a large stone tree. A deep stream runs through the room, and on the far side of the tree are three doors.

On the tree hang three candles, which burn with an eerie blue-green flame. If the top candle is extinguished, the resulting smoke renders the player unconscious, to be carried away by elves to another, unknown location.

The smoke from the middle candle allows the player to hear the stream talking, and it may well tell him the correct door to take (the other two doors of course land him in greater trouble!). The lower candle explodes as the player attempts to snuff out the flame, and a strong Genie appears, to do battle with the poor player.

This location could, of course, be adapted, so that the candles will react in a random way. The player may also, for instance, jump into the stream upon being attacked by the Genie, and be carried through a door (not necessarily the best one) by the water.

Let us have your ideas on adventure themes, monsters and so on, and remember: *Always call a Balrog "Sir"*!

NB Entries are coming in thick and fast for *The Hobbit* competition (see *Popular Computing Weekly*, March 3-9, for details). The current leader is Peter Batty from Oxford who has completed 67.5 percent of the adventure. ■

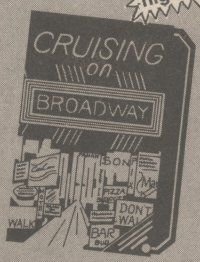

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, *Popular Computing Weekly*, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Cruising Challenge

£10 to be won

Can you beat the new high score?

First there was *Space Invaders*, then there was *Pacman* — now there is *Cruising*. This all-action, machine code, arcade type game, will test your powers of co-ordination to the limit. Never before has a game asked you to think so quickly, or move so fast.

Achieving a high score on *Cruising* takes considerable skill, and not a little practice. Getting through the first four levels is not easy, and that's just the beginning.

Now you can make that skill work for you. *Popular Computing Weekly* is offering £10 each month to the player with the highest score on *Cruising*. All you have to do to enter this month's competition is send a print-out of your highest score, together with your name and address, to:

Popular Computing Weekly
Cruising Challenge
Hobhouse Court
19 Whitcomb Street
London WC2 7HF

Each month we will publish the name of the winner and the new *Cruising* high score. Are you good enough to accept the Cruising Challenge?

The highest score sent in so far this month is 6812 from *Julian Downs* of 1 Maple Close, Sawtry, Cambridgeshire. If you have a higher score, you could still win this month's £10 — but hurry, entries close on March 31.

Notes

1) Each entry must consist of a ZX printout and your name and address.
2) Closing date for this month's *Cruising Challenge* entries is March 31.
3) The highest score each month will receive £10.
4) High scores cannot be transferred from one month to another.
5) The judges' decision is final.
6) No employees of Sunshine Publications Ltd, or their families, will be eligible to enter the *Cruising Challenge*.
7) *Cruising (on Broadway)* for the 16K and 48K ZX Spectrum is available through W H Smith and leading computer stores for just £4.95. It is also available mail-order from Sunshine Books Ltd, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

A period history of the elements

***Alick McWhirter** presents a short routine on the first 20 elements in the Periodic Table.*

This program has been designed to Run on the 32K BBC model B, but it should be quite easy to convert it to Run on other microcomputers. The program tests your knowledge on the first 20 elements of the *Periodic Table,* as these are particularly useful for chemistry students.

The *Periodic Table* was mainly created by Dimitri Mendeleev (1839-1907), who used the relative atomic mass numbers of the different elements to work out their placing on the table. By studying these numbers, he was also able to leave gaps for elements which he thought must exist but had not yet been discovered. H Mosely is credited with putting the table into its modern form.

As stated in the instructions, the program will test you on several basic facts about the given elements: the number of protons, neutrons or electrons; the valency; which ions are formed; or the electronic 'shell' arrangement.

For example, in the *Periodic Table,* oxygen is element Number 8 because it has 8 protons and 8 electrons in the neutral atom — this is called the relative atomic number.

There is a nucleus in the centre of each atom which contains the protons and neutrons. Electrons are arranged in different levels or 'shells' around the nucleus. Each level must be filled before the next is started.

Each element is stable (does not react easily with other elements) if it has its upper shell filled. For example, neon is very stable having 10 electrons — both the first (2) and second (8) shells are filled.

If an element does not have a filled outer shell, it can form a compound with another element. An element with an almost empty top electron shell may lose an electron (giving it a complete shell) and, in so doing, may give it to another element to complete an almost full shell. For example, hydrogen comprises one proton and one electron — the first shell is almost empty. Oxygen has a filled first shell (two electrons) and six electrons in its second shell — ie, oxygen is two electrons short of a complete second shell.

To make both the oxygen and hydrogen atoms stable, they join up to form water (H_2O) — two hydrogen atoms join with one oxygen atom. Each hydrogen atom gives away one electron and becomes stable, while the oxygen atoms receive two electrons and also stabilise.

THE MicroComputer SOFTWARE CLUB

FOR OWNERS OF VIC, ZX81, SPECTRUM, BBC, OR DRAGON MICROCOMPUTERS

Buying software for your computer is a gamble. Apart from the occasional review and, perhaps, a recommendation from a friend, you have precious little information upon which to base your purchasing decision.

Advertisements and clever packaging can make the the worst programs appear tremendous. It is not until you have 'gambled' your money that you discover how good they really are. Some are only slightly different to others you may already own; many are not as good as you would be entitled to expect; and others are just a complete waste of money. Of course, there are some excellent programs around, and many more appear month. Now there is a safe way of finding out about them.

- free membership -

THE MICROCOMPUTER SOFTWARE CLUB was started to make software purchasing easier, cheaper, and less risky. Membership is completely free of charge, as is the monthly Newsletter. Every month members receive full details on the best and latest programs available for their computer and, simply and confidently, are able to order any of the programs they choose at substantially less than normal prices.

— large savings — on top software

All programs are, at least, 10% cheaper than normal and, each month, the best of the most recent software is made available to members at 20% less than normal. Postage and packing is free on orders of two or more programs for delivery within the UK; ordering and payment are simple, and quality is guaranteed.

— no obligation —

Members are not obliged to buy a fixed number of programs from The Club. They buy what they want when they want. Whether it is one program in a year or one a month, they know that when they buy from THE MICROCOMPUTER SOFTWARE CLUB they are buying the best programs at the best prices.

— free Newsletter —

Our latest Newsletter offers programs from most leading suppliers - and from a few that, perhaps, you do not yet know. A program has to be good, very good, before it is recommended to members. It also has to be reliable and, even before the members' discount, it has to be good value for money. Subject coverage includes adventure, arcade, education, strategy games, household applications, family games, business, utilities and programming aids.

Remember, membership is completely free of charge and you are under no obligation to buy anything from The Club unless you really want to. If you own or use a ZX81(16K), Spectrum(16K or 48K), BBC (A or B), Dragon 32, or VIC (expanded or unexpanded), you should join THE CLUB.

JOIN TODAY

THE MICROCOMPUTER SOFTWARE CLUB
P.O.Box 166, Oxford, OX2 9BJ, England.

Free membership application

Please accept my application and enrol me as a member of The Microcomputer Software Club. I understand that membership is free of charge.

As a member I will receive the Club Newsletter free of charge and will be entitled to benefit from any savings offered to members on selected programs for microcomputers. I may cancel my membership at any time.

When completed, return form to:-

When is an 8K Vic not an 8K Vic?

***Peter Wilson** explains how you can run unexpanded programs on an expanded Vic20.*

I belong to a computer club. A lot of the members, including myself, complained that when the Vic's memory was expanded you could not Run some unexpanded programs without removing the extra memory, or the Super Expander cartridge.

To overcome this problem, I have written a small program to reconfigure the Vic's memory. When Run, the program asks you to press a number between *1* and *6*, which sets the relevant *Pokes*. If you press *1*, this will reconfigure the Vic so that user Ram starts at 4096, screen Ram at 7680 and colour Ram at 38400. If you press *2*, user Ram will start at 1024, screen Ram at 7680 and colour Ram at 38400.

Pressing *3*, *4*, *5* or *6* will reconfigure the Vic so that user Ram starts at 4608, screen Ram at 4096 and colour Ram at 37888. In addition, number 3 sets the Vic's memory at 8K+, without having the extra Ram — a condition that it could not set up on its own.

When this program is executed, it sets the Vic as if it had just been turned on and erases the reconfiguration program itself, so make a copy before Running it.

One word of warning, do not try to set up a configuration which has Ram missing. For example, if you have an 8K expansion plugged in and you reconfigure to "Unexpanded Vic+3K" it will show 6655 bytes free, but the user Ram will not start at 1024 because you do not have any Ram there.

Try Running this program on an unexpanded Vic and pressing number *6* — you will see what 28159 bytes free looks like. ■

Designer complete

*This is an extract from **Designer**, one of the programs in the chapter on graphics in* The Working Spectrum, *a book by David Lawrence, published by **Sunshine Books Ltd**, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF: £5.95, 228pp.*

Testing Module 3.5.3

If this module is functioning correctly you should be able to RUN the program and initialise the variables. Having done this, stop the program and enter, in direct mode, 127/200 and 127/100 as values for X1/Y1 and X2/Y2. These four values should result, if you GOTO 1280, in the drawing of a line from the middle of the top edge of the screen to around the middle of the screen.

Module 3.5.4

The purpose of this module is to allow the user to move a small cursor around the screen in order to set the start and finish co-ordinates of a line.

Commentary

Line 1560. Though the program is capable of shrinking the overall design by any specified factor and rotating it, lines can only be input with the design at normal size and unrotated. This line sets the angle of the design (ANGLE) and the reduction factor (S) accordingly, before calling up the module which draws the part of the design to which the user makes the screen point.

Line 1570. You may have noticed that the screen is only 168 pixels high, rather than the 176 permitted. This is to allow line 21 to be used to display the actual co-ordinates of the cursor in relation to the bottom left-hand corner of the overall design.

Line 1590. In the course of the program, five sets of variables are used at various points to store the same data, namely X/Y,X1/Y1,X2/Y2,TX1/TY1 and TTX1/TTY2. The simple reason for this is that at times the value of one co-ordinate is altered for some temporary purpose. The leading T is an indicator that this is intended as a temporary storage place. This line also permits the user to move the window pointed to by the screen after defining the beginning of a line. In this way lines may be defined which pass over more than one screen area.

Line 1630. Having drawn the specified line, the user is invited to confirm it or otherwise. If it is confirmed, the co-ordinates X1/Y1 and X2/Y2 are stored, in two byte form created by FN A$ and FN B$, in the undefined string A$.

Lines 1660-1770. You will recognise this as a fairly standard cursor moving routine. One difference is that apart from the cursor keys themselves, the keys immediately below them and to the right (TYU1) can be used to move the pixel cursor 10 places at a time, thus speeding up the process. Pressing 1 causes a return to an earlier part of the module, thus defining one of the sets of co-ordinates.

Testing Module 3.5.4

By entering a temporary line 1820 with Return and defining 01 and 02 in direct mode as 127 and 83 respectively, you should be able to call up this module and move the cursor around the screen, define two positions — you cannot yet move the screen in between the start and finish of the line — and see the line displayed for your confirmation or otherwise.

Module 3.5.5

It is this module which allows the window represented by the screen to be moved around the design command.

Commentary

Line 1820. The position of the screen in relation to the design as a whole is defined by setting the position of the centre of the screen. Note also that when the program function is 2 only positions with positive co-ordinates are available to the user. That is, the user can only draw lines in parts of the design which have positive addresses.

This is because negative addresses cannot be stored in A$ by the two functions FN A$ and FN B$. At other times during the program's execution, such as when a design is rotated, lines may be created whose ends have negative co-ordinates and these will be printed without problems if the screen window is set to point to them.

Line 1840. The borders of the screen are set to match the specified centre of the screen.

Lines 1860-1880. Using the function FN A, the values stored in A$ are translated back into numerical co-ordinates. They are translated into positions relative to the centre of the screen window. This distance is then multiplied by the scaling factor. The co-ordinates are then rotated around the centre of the screen through the required angle.

Lines 1890-1930. The procedure for moving a point with co-ordinates X and Y through an angle, say A, is to apply the formula: X2 = X*COS A + Y*SIN A and Y1 = – X*SIN A + Y*COS A.

Line 1940 The variable Search is used to indicate that the deletion module is to be called.

Testing Module 3.5.5

You should now be able to move the screen window over your design and also to move the screen in between the first and second set of co-ordinates when defining a line. You should also be able to print the overall design, or a part of it, at various scales and at various angles.

Module 3.5.6

This module draws the line pointed to by the loop variable 1 in the previous module. The line is drawn twice with OVER set and the user is then given an opportunity to specify either that the line remains or that the program leaves the module or that the address of the relevant line is removed from A$. The line is flashed until one of these inputs is made.

Testing Module 3.5.6

You should now be able to delete lines.

Summary

This program is a useful tool in a variety of applications, given a little imagination. You can plan layouts, draw maps or simply mess about. In fact you can simulate many of the capabilities of more expensive graphics computers beloved of engineers and scientists in many fields.

But do not forget that the program is also an example of an easily available technique applied to the Spectrum. The books are there for all of us, crammed with powerful ideas that help release the power of your micro.

Going Further

1) Could you combine this program with the techniques of shape drawing found in the Tangrams program, allowing the start address of certain common shapes to be specified in A$?

2) The program would be more flexible if it made provision to print out text as part of the overall design. Once again the co-ordinates would need to be stored in A$. ■

BUGBEAR

EASIREADER
THE GREATEST PROGRAMMING AID SINCE FINGERS CUT DOWN PROGRAM ENTRY TIME

Over 99% of bugs in programs copied from printout listings are the result of entry errors. The EASIREADER holds copy at a comfortable angle and a specially-designed cursor runs down the program to prevent skipping between complex and similar-looking lines.
It effectively keeps a 'finger' on your current line — essential for use with SINCLAIR computers or when using the 'shift' key.
Available now only from BUGBEAR (Patent Pending No. 8232718) at an introductory price of £12.99 (plus £1.25 p&p). SAE for further details

£££s TO BE WON WITH SUPER DRAGSTER

BBC MODEL B
(32K MODEL A)

For 1 or 2 players.
Design your DRAGSTER and race it against a friend or the computer. Too heavy — it won't move! Too clumsy — it crashes!
Revving engines, crash noises, hiscore and victory tune — superb sound and graphics.

BEWARE THE SUPER DRAGSTER! What is it? Beat the computer — if you can — and find out. Great game with cash prizes. Competition details with each program. Previous knowledge of dragsters not required. A winner every month — it could be you. Only £5.95 inc p&p.

Cheque/PO to: BUGBEAR, Dept W, Nicholson Buildings, Templetown, South Shields, Tyne and Wear, NE33 5RZ.

Man made

***Keith and Steven Brain** explain how to add graphics to your own Dragon games.*

In our last article, we looked at reaction testing and saw how a very simple idea became much more complicated as random factors and on-screen scoring were introduced. However, even at the end we were still only looking for the numbers one and two, which is not exactly mind-blowing! Good games always have a story attached to them, so what about converting that program scheme to a war game?

It is always a good idea to include the instructions in the title sequence (line 10). The *Play* command in line 20 is a useful way of causing the program to pause while the instructions are digested.

Adding graphics

Let us consider how to make a low-resolution picture of a man, using characters 128 to 143, which consist of black and green blocks in varying arrangements. A black background is necessary, so we must change the default *Cls* command (green) to *Cls0* (black).

The best way to design your figure is to use squared paper (either ordinary graph paper or fancy plotting sheets). Fill in squares to make the figure and divide it into 2 × 2 blocks. You can then work out which characters these correspond to — referring to *Appendix A* of the Dragon manual if necessary — and put these numbers into a grid. If the number required is 128 you will have to find an alternative, as this is the same as the background colour we have set on the screen. For our man, the grid is 3 × 4 and consists of the following characters:

```
 129  135  131
(128) 133 (128)
(128) 142  138
(128) 136  136
```

Graphics characters on the Dragon cannot be called directly from the keyboard and must be accessed via the *Chr$* function. To avoid altering our original program any more than necessary, we will put the new part in a *subroutine* at line 1030. To *Print* the top part of our man at a particular position, we need to:

```
1030 PRINT@B,CHR$(129);CHR$(135);CHR$(131);
```

The second row of characters needs to be one line (32 characters) below this although, as the first character is 128, it is simpler to ignore it and use:

```
1040 PRINT@(B+33),CHR$(133)
```

Similarly, the last two rows are produced by:

```
1050 PRINT@(B+65),CHR$(142);CHR$(138)
1060 PRINT@(B+97),CHR$(136);CHR$(136)
```

You can check what the figure looks like, and that you have entered the lines correctly, by trying *Goto* 1030. Finally, we must not forget to add a *Return* from the subroutine.

The next problem is working out where on the screen the figure can appear, if he is not to find himself blown to pieces as the screen wraps round! We will restrict him to moving horizontally near the centre of the screen, and prevent wrap-around, by including *B=Rnd(30)+255* in line 110. This forces the figure to be drawn in one of the 30 positions following position 255 (ie, on line 9):

```
110 B=RND(30)+255:SOUND255,1:GOSUB1000
```

One of the great problems in combat is recognising your enemy and shooting him quickly without also blowing your mates' heads off. So, we will substitute different coloured figures for the numbers one and two, with the green men representing our allies and the yellow peril the enemy.

The yellow and black blocks required each have a character code that is 16 higher than the corresponding green and black block, so this number must be added to each of the *Chr$* functions when *C=2*. There are many ways of doing this, such as by adding another variable to the *Chr$* codes in lines 1030-1060 and setting it to 16 if C=2 or 0 if C=1:

```
1020 IFC=2 THEN G=16 ELSE G=0
1030 PRINT@B,CHR$(129+G);CHR$(135+G);
     CHR$(131+G);
1040 PRINT@(B+33),CHR$(133+G);
1050 PRINT@(B+65),CHR$(142+G);
     CHR$(138+G);
1060 PRINT@(B+97),CHR$(136+G);
     CHR$(136+G);:RETURN
```

Your success and failure rate is kept as before, with *D* and *E*. The average reaction time is also now updated in 1010 in each cycle:

```
1010 SOUND200,5:E=E+1:T=(T+TIMER)/2:
     GOTO50
```

The logic has had to be modified a little, as success now only comes if you hit a key when the yellow man appears! If you fire at your own man, or miss one of the yellow perils, there is a fair random chance that you will lose one of your own men. The length of time for which the figure is displayed is also rather shorter and variable.

Instead of figures, a histogram-type graphic status display has been included in the screen update line 50:

```
50 CLS0:PRINT@31,"";:FORN=0TO E
   :PRINTCHR$(149);:NEXT
   :PRINT@31,CHR$(128);: PRINT@448,"";: FOR
   N = 1TO (10−D): PRINTCHR$(133);:NEXT
```

Yellow bands appear at the top of the screen to mark the number of enemy killed. The number of times *Chr$(149)* is printed depends on the variable *E*. It is easier to count down than up with a *For-Next* loop, as the minimum number of loops is one. Also, the statements *Print31,"";* and *Print@31,Chr$(128);* are required to start the histogram correctly on the left margin of the screen, by wiping out the erroneous first block produced at the end of the previous line. Green bands appear more easily via *D* at the bottom to mark your surviving men!

End of game

The end of the game is reached when you have killed all the enemy (*E=10*), or all your men are dead (*D=10*). As your proficiency increases, you can alter these numbers. There is easily room for a display of more than 100 dead enemy.

The win and lose reports (at 3000 and 2000) tell you the final state of the forces and give an assessment of your average reaction time. This is kept to two decimal places by means of the *Print Using "###.##";T* Print formatting command.

Now that we have seen how simple graphics can be produced and introduced into a game, we are ready to explore moving graphics with cursor and joystick control. See next week. ■

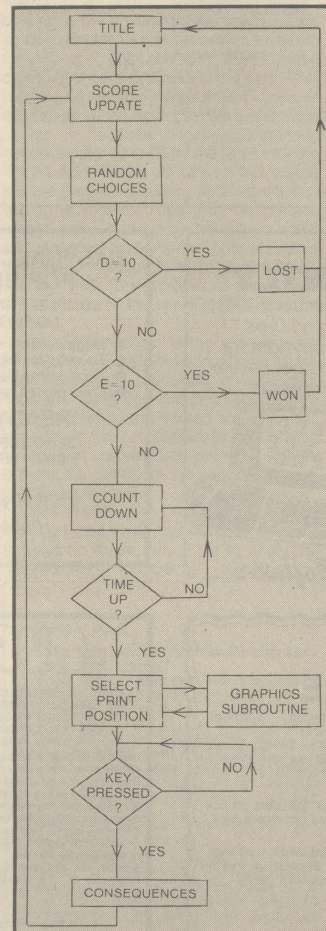

Fig 1. Firing-line flowchart.

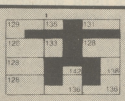

Fig 2. Constructing the picture of a man from text-screen characters.

EASIREADER
NEW
The Greatest Programming Aid Since Fingers
Cut down program entry time
Minimise Bugs by Minimising Entry Errors

The EASIREADER is an attractive, high-quality acrylic plastic stand designed to aid the manual entry of programs from magazine listings, printouts and most books.
99 percent of bugs in programs copied from printout listings are the result of entry errors. The EASIREADER holds the copy at a comfortable angle, avoiding strain, and a specially-designed cursor runs down the program to prevent skipping between complex and similar-looking lines.
It effectively keeps a 'finger' on your current line, especially useful for two-handed keyboard entries and for use with Sinclair computers.
Available now only from BUGBEAR (Patent Pending No. 8232718) at an introductory price of **£12.99** (plus £1.25 p&p).
Send cheque/PO or SAE for further details to: BUGBEAR, Dept. W, Nicholson Buildings, Templetown, South Shields, Tyne and Wear, NE33 5RZ.

ZX SPECTRUM
SUPERB BUG-BYTE PROGRAMS
Spectral Invaders — the renowned version of Space Invaders. Written in machine code for fast action (16K) — £5.
Spectres — highly acclaimed program. Eddy the electrician thwarting the ghosts with secret light generator. (16K or 48K) — £8.
All orders despatched first-class post on day of receiving order. Prices include postage and packing. Send without delay to:
SUPERSPRINT SOFTWEAR

SECOND-HAND AND NEW MACHINES

RENTAL OPTION available

Phone: **636 9612 Martin Foreman**

103 Great Russell Street, London WC1

"Inventing video games can't be a full-time job. -Can it?"

Yes. - If you have a genuine interest in computer games, and you know how to programme in Assembler, you might be just the person we're looking for to join one of our teams working on the creation, writing and development of new home entertainment programmes. You will understand their appeal, and will probably have your own ideas on improvements that could be made to games that you've seen and new themes that could be developed.

Our existing range already includes some of the most imaginative and sophisticated games on the market - games which have an educational value, which have been designed to test dexterity, reaction-speed, alertness and concentration, or which revolve round secret fantasies of becoming an ace pilot, a football superstar, the hero of a dangerous jungle adventure...

But, no one has yet set a limit on the possibilities of invention. And, the demand for new programmes is growing - fast. Even now, in the USA, computer games are almost as big an industry as records and feature films.

So, success will be very well rewarded with performance-related bonuses added to a competitive annual salary. And, as the division develops, there should be excellent opportunities for career progression.

To find out more, please telephone, Richard Gibson-Robinson, Software Development Manager, on 01-437 4393 (reversing charges if necessary) or write to him at THORN EMI Video Ltd., 5th Floor, Film House, 142 Wardour Street, London W.1.

GONE FISHING GONE AWAY

L H Thomas of Bridge Close, Haxby, York, writes:

Q I recently bought a game called the 'Teleng Home Entertainment Centre'. I have managed to buy about four games for it, but it now seems impossible to obtain any more. I did write to the manufacturers, but received my letter back marked 'gone away', so I presume that the company has folded. In *Popular Computing Weekly* I read that the Games Centre in Oxford Street sells all sorts of computer games. Do you know if they stock them for my computer game? If not, do you know anyone who does?

A I went in and spoke to someone at the 'Games Centre.' Although they had heard of the Teleng, they knew nothing about it — it was only a name to them. They do not, and never have, stocked games for it. Perhaps one of our readers can help?

CONSULT THE ORICLE

Melvyn Quek of Manor Way, Mitcham, Surrey, writes:

Q I am 14 and at present am using a ZX81. I wish to progress to an Oric-1, as announced in your issue 26, but I am unclear on a few points:

a) Will Forth be available on just the 48K version?

b) How much Ram will be available to the user on the 16K machine?

c) How many user definable graphics will there be, and will the character set include lower-case characters?

d) What will the tape transfer rate be?

A Forth will only be available on the 48K version. The amount of user Ram depends on whether you are in high-res, or normal mode. If you are in normal mode, then you will have to use the *Grab* command to access the balance of the screen space otherwise reserved for high-res. This is not as complicated as it sounds. In high-res there should be about 9K available to the user.

The tape transfer rate will be either 2400 baud, or 300 baud if you want to take extra care against corruption. The whole character set is redefinable on the Oric. For further details, see our review of the Oric in *Popular Computing Weekly*, January 13.

A LIGHTER SHADE OF PALE

Keith Watson of Yardhurst Gardens, Margate, Kent, writes:

Q Can you give me details of how a light pen works, specifically for the BBC machine? Are there several different kinds? How easy would it be to make a light pen, assuming that the analogue interface was already installed?

A Basically, a light pen uses a photo transistor to measure the changes of resistance caused by light between a collector and emitter. You will need to use a BBC B machine, because the A does not have the necessary joystick port.

The pen will read whether a dot is colour, or black and white. There is a special register in the 6845 chip to control it. This register is accessible from Basic.

You should have no problems in fitting a light pen, if you already have an analogue to digital converter. If not, there is a circuit diagram and all the necessary instructions in Stephen Adam's book *20 Electronic Projects* available from Interface.

WHOSE FAULT IS IT ANYWAY?

Brendt Wohlbert of Plover Road, George 6530, South Africa, writes:

Q I have been considering buying a ZX Spectrum and would like to know about the faults in the Rom. Are the later Roms improved or will an updated Rom be brought out by Sinclair? What advantages does the Atari 800 have over the 400? Can the 400 be updated to include the features found in the 800?

A The faults in the Spectrum Rom are not immediately noticeable to the average user. As long as the user stays in Basic there will be little interference. The only two faults are that *Screen$* cannot be concatenated, and that if you hold a key down on a keyword, the cursor will not change and the keyword will be repeated.

Most errors will only affect machine code programs. There is also a section of redundant ZX81 code in the Rom. The best place to look for details of these is in Ian Logan's book *Understanding Your Spectrum* published by Melbourne House.

The Atari 800 features a full keyboard, unlike the membrane on the 400. It also has a composite video output, to enable it to be used with either a colour or black and white monitor. The Atari 400 is, strictly speaking, limited to 16K. A 48K memory expansion is available from Maplin, although this voids the Atari guarantee.

MACHINE CODE WANTED

Saleem Gupta of Hounslow, Middlesex, writes:

Q I have a Vic20 and would like to know why no one seems to publish machine code programs for it. Including you. Are they particularly difficult to write? Could you please publish one for the unexpanded Vic — you publish them for the Spectrum and the ZX81.

Also, I would like to know why the memory add-on for the Vic is so much more expensive than for the Spectrum. I have been told that both the Vic and the ZX81 use the same memory chips. Is that true?

A Machine code for the Vic is a subject that does come up from time to time. We can only publish what we are sent, and no one seems to be writing machine code programs, other than the commercial software houses. Perhaps this is partly due to the fact that the necessary information is not as readily available to Vic owners as it is to ZX owners — witness the number of books on machine code and disassembling the Spectrum Rom.

As for memory, a manufacturer will charge what he thinks he can get for the product. It is not that memory chips for the Vic are particularly expensive, it is just that the ZX market is so competitive that prices have been forced down.

The price of Ram has dropped considerably since the original memory expansions were brought out. Sinclair was forced to drop the price of its 16K Ram pack, for the ZX81, because other manufacturers were producing the same memory for half the price. This has not happened with other computers.

The Vic uses 2114s — the same as the ZX81, only the access time is different. Those on the Vic are faster, under 200 nanoseconds, and can be bought for about £1 each from component suppliers.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Ian Beardsmore and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW,* Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Ziggurat

Say what you mean

The problem of the *meaning* of lines of program text — in the case of Basic or any other language — is a key way into the limitations of artificial intelligence.

There are two principal aspects: What does this perfectly legal code mean and — can we find a way to *always decide* what it means, in any case?

C Northcote Parkinson *(Parkinson's Law,* 1962) posed these same questions for intelligence tests "... high marks are gained by those who subsequently prove to be practically illiterate. So much time has been spent in studying the art of being tested, that the candidate rarely has time for anything else." Parkinson was stressing that, though the candidate might be able to define the meaning of a question in any intelligence test and had learnt the rules for so doing, this did not mean that he would be able to establish or convey meanings outside the narrow framework of the tests.

Though not always true, generally speaking a line:

```
1000 IF X=Y THEN GOTO 2000:PRINT "Different"
```

is not as it would appear at first sight. You might expect, given *general* rules about *If* statements and the use of colons to distinguish statements, that if *X* and *Y* were not equal then control would pass to the statement which contained the *Print* command. This does not often happen.

What usually happens is that the *Print* command (and any other statements on that line) is ignored. We have a conflict in definitions: In an *If* statement, control moves to the next line; this is not treated as equivalent to control moving to the statement after the colon (which is *supposed* to be the same).

I would guess that when this ambiguity was first discovered it had not been foreseen. As with many aspects of programming, things crop up which have not been predicted and whose meaning is unsure — *but which are not illegal.*

The decision to proceed with the standard way of interpreting the meaning (to ignore any other statements on the same line, if the *If* is false) is not based on the existence of some clear and unambiguous interpretation of the meaning. It happens because that is the way the interpreter works.

We cannot say what Line 1000 means without adding to our original rules (in this case based on what another system, the interpreter, does). In any system of rules, there will be instances which cannot be examined by the rules, but which are not outside the range of the rules. These same ideas can be used to question the possibility of artificial intelligence: if a machine is rule-bound how can it cope with things such as Line 1000 (about which we are able to philosophise) if the rules cannot be complete? Turing also showed that there could be no such thing as a universal decision procedure, which would allow you to establish meaning in every case: though the interpreter was used to decide on the effect of Line 1000, it cannot always be so used.

In a more pretentious language (Pascal) we still come across problems. The one from last week:

```
IF X=Y THEN IF A=B THEN C:=0 ELSE D:=0;
```

which is a composite of two *If/Then/Else* statements: To which *If* does the *Else* refer? The *ad hoc* solution (from the translator) is to make the *Else* refer to the second *If*. The subject of much debate (called the "dangling" *Else* in computer science), it shows that even for a more up-market language there are as many problems.

In anything as complex as a computing machine it is impossible to predict all possible contingencies (there can be no universal decision procedure) and this accounts for many "bugs", and the many unknown: and undocumented) features which appear with use.

The designer of a computer never realises what it can really do. ■

Boris Allan

Puzzle

The square root of PCW

Puzzle No 46

Here is what is called an Alphmetic, in which letters have been substituted for the digits 1 to 9 (zero is not used).

$\sqrt{\text{SQUARE}} = \text{PCW}$

It is obvious that every square has a square root, but can you find the number that *PCW* stands for? Careful, though — there may be more than one possible answer!

Solution to Puzzle No 41

The maximum value for each digit, when cubed, is 729 (9^3). So, for 2, 3 or 4 digit numbers the maximum sums of cubes are 1458, 2187, and 2916, respectively. However, with five digits the maximum possible sum is only 3645 (5×9^3) — less than five figures.

Therefore numbers of five or more digits are not possible. Clearly, as the four digit total can only equal a maximum of 2916 we can, by continuing this process of reasoning, reduce the range of numbers to be tested to those under 1999.

```
10 FOR N = 1 TO 1999
20 LET N$ = STR$ N
30 LET T = 0
40 FOR M = 1 TO LEN N$
50 LET T = T + (VAL N$(M) * VAL N$(M) * VAL
   N$(M))
60 NEXT M
70 IF T = N THEN PRINT N
80 NEXT N
```

By running the program it can be seen that there are only four numbers with this property:

$153 = 1^3 + 5^3 + 3^3 = 1 + 125 + 27$
$370 = 3^3 + 7^3 + 0^3 = 27 + 343 + 0$
$371 = 3^3 + 7^3 + 1^3 = 27 + 343 + 1$
$407 = 4^3 + 0^3 + 7^3 = 64 + 0 + 343$

It is interesting to try to do the same sort of calculation for four-digit numbers giving: 1634, 8208 and 9474.

Winner of Puzzle No 41

The winner of Puzzle No 41 is: George McKinlay, Limes Avenue, Buxton, Lancs, who receives £10.

FROM SILICA SHOP — WITH EVERY PURCHASE OF AN

ATARI 400 800

ATARI

REDUCED PRICES!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K £159

ATARI 400 with 48K £228

ATARI 800 with 48K £349

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

SILICA SHOP

For free brochures and reviews on our range of electronic products, please telephone 01-301 1111. To order by telephone, just quote your name, address, credit card number, and order requirements and leave the rest to us. Post and packing is FREE OF CHARGE in the UK. Express 24 hour delivery available at an extra charge.

- SHOP DEMONSTRATION FACILITIES — we provide full facilities at our shop in Sidcup, Monday to Saturday 9am to 5.30pm (closing Thursday 1pm, Friday 8pm)
- MAIL ORDER — we are a specialist mail order company and are able to supply goods direct to your door.
- MONEY BACK UNDERTAKING — if you are totally unsatisfied with your purchase, you may return it to us within 15 days. On receipt of the goods in satisfactory condition we will give you a full refund.
- PART EXCHANGE/SECOND HAND MACHINES — we offer a part exchange scheme to trade in many makes of T.V. game for personal computers.
- COMPETITIVE PRICES — our prices, offers and service are very competitive. We are never knowingly undersold, and will normally match any lower price quoted by our competitors.
- FREE ADVICE — available on the suitability of various computers.
- AFTER SALES SERVICE — available on all computers out of guarantee.
- VAT — all prices quotes above include VAT at 15%.
- CREDIT FACILITIES — low rates credit over 12, 24 or 36 months, please ask for details.
